Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	13 March 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 March 2017
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this Phase III, open-label, multicenter, randomized study was to investigate the efficacy of atezolizumab (Anti-PD-L1 Antibody) compared with chemotherapy in subjects with locally advanced or metastatic urothelial bladder cancer after failure with platinum-containing chemotherapy.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Serbia: 5
Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	Finland: 3
Country: Number of subjects enrolled	United States: 24
Country: Number of subjects enrolled	Korea, Republic of: 31
Country: Number of subjects enrolled	Turkey: 16

Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	Norway: 5
Worldwide total number of subjects	931
EEA total number of subjects	676

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	371
From 65 to 84 years	558
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

Recruitment included in 198 centers in 29 countries: France, Spain, Great Britain, Italy, Japan, Germany, Netherlands, Canada, Korea, Taiwan, Switzerland, United States, Greece, Belgium, Australia, Turkey, Poland, Portugal, Romania, Denmark, Czechoslovakia, Slovakia, Russia, Hungary, Norway, Serbia, Sweden, Finland, and Austria.

Pre-assignment

Screening details:

Subjects in the study included: histologically or cytologically documented locally advanced or metastatic UBC; and disease progression during or following treatment with at least one platinum containing regimen for inoperable, locally advanced or metastatic UBC or disease recurrence.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Chemotherapy (Vinflunine, Paclitaxel, or Docetaxel)

Arm description:

Subjects randomized to the chemotherapy arm received vinflunine, paclitaxel, or docetaxel per the investigator's choice. Vinflunine 320 milligrams per square meter (mg/m^2), paclitaxel 175 mg/m^2 , or docetaxel 75 mg/m^2 was administered intravenously on Day 1 of each 21-day cycle until disease progression per standard RECIST v1.1 or unacceptable toxicity.

Arm type	Active comparator
Investigational medicinal product name	Vinflunine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects randomized to the chemotherapy arm received vinflunine, per the investigator's choice. Vinflunine 320 milligrams per square meter (mg/m^2) was administered intravenously on Day 1 of each 21-day cycle until disease progression per standard RECIST v1.1 or unacceptable toxicity.

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects randomized to the chemotherapy arm received docetaxel per the investigator's choice. Docetaxel 75 mg/m^2 was administered intravenously on Day 1 of each 21-day cycle until disease progression per standard RECIST v1.1 or unacceptable toxicity.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects randomized to the chemotherapy received paclitaxel, per the investigator's choice. Paclitaxel 175 mg/m^2 was administered intravenously on Day 1 of each 21-day cycle until disease progression

per standard RECIST v1.1 or unacceptable toxicity.

Arm title	Atezolizumab
Arm description: Atezolizumab was administered intravenously at a fixed dose of 1200 milligrams (mg) on Day 1 of each 21-day cycle. Subjects received atezolizumab as long as they continued to experience clinical benefit in the opinion of the investigator until unacceptable toxicity or symptomatic deterioration attributed to disease progression as determined by the investigator	
Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atezolizumab was administered intravenously at a fixed dose of 1200 milligrams (mg) on Day 1 of each 21-day cycle. Subjects received atezolizumab as long as they continued to experience clinical benefit in the opinion of the investigator until unacceptable toxicity or symptomatic deterioration attributed to disease progression as determined by the investigator

Number of subjects in period 1	Chemotherapy (Vinflunine, Paclitaxel, or Docetaxel)	Atezolizumab
Started	464	467
Received Treatment	443	459
Completed	89	133
Not completed	375	334
Adverse event, serious fatal	345	322
Consent withdrawn by subject	27	9
Lost to follow-up	3	3

Secondary: Percentage of Participants With Objective Response Rate (ORR) as Determined by the Investigator With Use of Response Evaluation Criteria In Solid Tumors Version 1.1 (RECIST v1.1)

End point title	Percentage of Participants With Objective Response Rate (ORR) as Determined by the Investigator With Use of Response Evaluation Criteria In Solid Tumors Version 1.1 (RECIST v1.1)
End point description:	
ORR was defined as the percentage of participants who had an objective response. Objective response was defined as either a complete response (CR) or partial response (PR) as determined by the investigator with use of Response Evaluation Criteria in Solid Tumors, Version 1.1 (RECIST v1.1). Objective response in this study did not need to be a confirmed response. CR: disappearance of all target lesions. PR: At least a 30% decrease in the sum of diameters of all target lesions, taking as reference the baseline sum of diameters, in the absence of CR. ORR=CR+PR	
End point type	Secondary

End point timeframe:

Up to approximately 25 months after first participant enrolled

Secondary: Progression-free Survival (PFS) as Determined by the Investigator With Use of RECIST v1.1

End point title	Progression-free Survival (PFS) as Determined by the Investigator With Use of RECIST v1.1
-----------------	---

End point description:

PFS was defined as the time between the date of randomization and the date of first documented progression of disease (PD) or death, whichever occurred first. PD was determined on the basis of investigator assessment with use of RECIST v1.1. PD: at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum of diameters on study (including baseline). In addition to the relative increase of 20%, the sum of diameters had to demonstrate an absolute increase of ≥ 5 millimeters (mm).

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Adverse Events (AEs)

End point title	Percentage of Participants With Adverse Events (AEs)
End point description:	
An adverse event is any untoward medical occurrence in a participant administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as adverse events.

End point timeframe:

Predose (0 hours) on Day 1 of Cycles 1, 2, 3, 4 and every 8 cycles thereafter; at treatment discontinuation (up to 25 months); at 120 days after last dose of atezolizumab (up to 25 months; each cycle is 21 days)

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: No statistical analyses for this end point.

End point values	Atezolizumab

Secondary: Change From Baseline in European Organisation for Research and

Treatment of Cancer (EORTC) Quality-of-Life Questionnaire Core 30 (QLQ-C30) Score: Global Health Status Scale

End point title	Change From Baseline in European Organisation for Research and Treatment of Cancer (EORTC) Quality-of-Life Questionnaire Core 30 (QLQ-C30) Score: Global Health Status Scale
-----------------	--

End point description:

The EORTC QLQ-C30 includes five functional scales (physical, role, cognitive, emotional, social); a global health status (GHS)/quality of life (QoL) scale; and items measuring fatigue, pain, nausea and vomiting, dyspnea, appetite loss, sleep disturbance, constipation, diarrhea, and financial difficulties. The score range for each scale and single-item measure is 0 to 100, where higher scores indicate a higher response level (i.e., better functioning, better QoL, worse symptoms). Key scales included physical functioning, and fatigue, and GHS.

End point type	Secondary

Reporting groups

Reporting group title	Atezolizumab
-----------------------	--------------

Reporting group description:

Atezolizumab was administered intravenously at a fixed dose of 1200 milligrams (mg) on Day 1 of each 21-day cycle. Participants received atezolizumab as long as they continue to experience clinical benefit in the opinion of the investigator until unacceptable toxicity or symptomatic deterioration attributed to disease progression as determined by the investigator

Reporting group title	Chemotherapy (Vinflunine, Paclitaxel, or Docetaxel)
-----------------------	---

Reporting group description:

Participants randomized to the chemotherapy arm will receive vinflunine, paclitaxel, or docetaxel per the investigator's choice. Vinflunine 320 milligrams per square meter (mg/m²), paclitaxel 175 mg/m², or docetaxel 75 mg/m² will be administered intravenously on Day 1 of each 21-day cycle until disease progression per standard RECIST v1.1 or unacceptable toxicity.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 September 2015	Protocol was amended to include changing the ratio of patients treated with vinflunine versus taxane such that it will be possible to conduct a subgroup analysis of patients treated with vinflunine versus atezolizumab. Within the control arm of the study, to allow more patients intended to receive vinflunine treatment when randomized into this trial, the maximum percentage of the patients who are treated with a taxane (paclitaxel or docetaxel) will be decreased from 50% to 40% with implementation of a cap. Once enrollment has reached 40% within the taxane intent-to-treat population, subsequent patients randomized to the control arm will receive vinflunine treatment.
08 March 2016	Protocol was amended to include an update to the use of any live vaccine to be prohibited 28 days prior to randomization.
21 June 2016	Protocol was amended to include an increase in the total number of patients enrolled in the study from 767 to 931 to achieve the pre-specified minimum number of 230 IC2/3 patients and 537 IC1/2/3 patients. Subsequently, the numbers of events were revised to ensure the study retains sufficient power and follow-up to estimate overall survival (OS).
28 October 2016	Protocol was amended based on updated clinical data regarding the atezolizumab half-life of 27 days, the following changes have been implemented: The period during which female patients must remain abstinent or use contraception and the length of follow-up of pregnancy reporting has been revised from 90 days to 5 months after the last dose of atezolizumab;The period during which patients must agree not to receive live, attenuated vaccine has been revised from 90 days to 5 months after the last dose of atezolizumab.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
