

## Clinical trial results:

### A Phase 2, Fixed-Sequence, Open-Label, Switch-Over Study of the Safety and Tolerability of HPN-100 Compared to Sodium Phenylbutyrate in Children

### 6-17 Years of Age with Urea Cycle Disorders, with a Long-Term Safety Extension

#### Summary

EudraCT number	2014-003246-26
Trial protocol	Outside EU/EEA
Global end of trial date	01 August 2011

#### Results information

Result version number	v1 (current)
This version publication date	09 June 2016
First version publication date	09 June 2016

#### Trial information

##### Trial identification

Sponsor protocol code	HPN-100-005
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00947544
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Horizon Therapeutics Inc.
Sponsor organisation address	150 S. Saunders Road, Lake Forest, United States, 60045
Public contact	Elizabeth Robinson, Horizon Therapeutics Inc., clinicaltrials@horizonpharma.com
Scientific contact	Tom Vescio, Horizon Therapeutics Inc., clinicaltrials@horizonpharma.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000297-PIP02-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 March 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 August 2011
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Protocol HPN-100-005 was the first study of HPN-100 in pediatric subjects with urea cycle disorders (UCDs) and was a fixed-sequence, open-label, switch over study of HPN-100 with a long-term (12 month) safety extension designed to assess the safety of HPN-100 and to prospectively assess its ability to control blood ammonia as compared with Sodium Phenylbutyrate (NaPBA). Upon DSMB review of the first ten subjects who completed the switch over part of the study, and with DSMB approval, up to an additional 20 subjects were enrolled into the safety extension part of the study. The extension part of the study was a separate study (HPN-100-005SE). HPN-100 is a triglyceride that has a similar mechanism of action as NaPBA. It is a liquid with minimal taste and odor. Three teaspoons of HPN-100 (~17.4mL) delivers an equivalent amount of PBA to 40 tablets of NaPBA.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to an Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. The study was conducted in accordance with legal and regulatory requirements including Guidance for Good Clinical Practice (International Conference on Harmonization [ICH] 1996), and the Declaration of Helsinki (World Medical Association 2008). Only participants who met the inclusion criteria and none of the exclusion criteria were enrolled to this study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 March 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 10
Country: Number of subjects enrolled	Canada: 1
Worldwide total number of subjects	11
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	7
Adolescents (12-17 years)	4
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

The study was to assess if HPN-100 could control blood ammonia compared with NaPBA. Subjects received NaPBA three times daily with meals during the first week and the same PBA mole-equivalent dose of HPN-100 during the second week.

### Period 1

Period 1 title	Switch-Over Period (2 weeks) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	HPN-100 and NaPBA
-----------	-------------------

Arm description:

1 week of NaPBA treatment followed by 1 week of HPN -100 treatment.

Arm type	Experimental
Investigational medicinal product name	Glycerol phenylbutyrate
Investigational medicinal product code	HPN-100
Other name	GT4P, Glyceryl tri-(4-phenylbutyrate)
Pharmaceutical forms	Oral liquid
Routes of administration	Oral use

Dosage and administration details:

g/mL gram(s) millilitre 3 teaspoons of HPN-100 (approximately 17.4mL). Subjects dosed three times daily with meals during the first week and the same PBA mole-equivalent dose of HPN-100 during the second week.

Investigational medicinal product name	NaPBA
Investigational medicinal product code	sodium phenylbutyrate
Other name	AMMONAPS
Pharmaceutical forms	Powder and solvent for oral solution, Tablet
Routes of administration	Oral use

Dosage and administration details:

NaPBA was to be administered as either tablets or powder. The dosing was in grams. Subjects dosed three times daily with meals. The dose level recommended by the investigator for each individual subject was not to exceed 20 g per day as recommended in the approved product labeling.

Number of subjects in period 1	HPN-100 and NaPBA
Started	11
Completed	11

## Baseline characteristics

### Reporting groups

Reporting group title	HPN-100 and NaPBA
-----------------------	-------------------

Reporting group description:

1 week of NaPBA treatment followed by 1 week of HPN -100 treatment.

Reporting group values	HPN-100 and NaPBA	Total	
Number of subjects	11	11	
Age Categorical			
Units: participants			
<=18 years	11	11	
Between 18 and 65 years	0	0	
>=65 years	0	0	
Age Continuous			
Units: years			
arithmetic mean	10.2		
standard deviation	± 3.95	-

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All treatment emergent adverse events (TEAE) were defined as an AE that began (or a pre-existing AE that worsened) after receiving study drug on Day 1 and at any time through 7 days after the last dose of study drug.

Assessment type	Systematic
