

Clinical trial results:

A Double-Blind, Randomized, Placebo-Controlled Study of the Efficacy, Safety/Tolerability, and Pharmacokinetic Profile of UCB0942 in Adults with Highly Drug-Resistant Focal Epilepsy

Summary

EudraCT number	2014-003330-12
Trial protocol	DE BE NL HU ES IT
Global end of trial date	18 July 2017

Results information

Result version number	v1 (current)
This version publication date	03 August 2018
First version publication date	03 August 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 July 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	18 July 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the efficacy of UCB0942 administered concomitantly with each subject's current, stable antiepileptic drug (AED) regimen in subjects who had 4 or more focal seizures with or without secondary generalization per week and who failed to achieve seizure control with ≥ 4 AED regimens of adequate dose and duration.

Protection of trial subjects:

During the conduct of the study all subjects were closely monitored.

Background therapy:

Patients remained on their background antiepileptic medications during the entire study.

Evidence for comparator: -

Actual start date of recruitment	28 August 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Bulgaria: 5
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Spain: 22
Worldwide total number of subjects	55
EEA total number of subjects	55

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	55
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Enrollment started in August 2015 and concluded in July 2017.

Pre-assignment

Screening details:

Participant Flow refers to the Randomized Set.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Carer, Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo/UCB0942
------------------	-----------------

Arm description:

After 2-week in the Inpatient Period, Placebo subjects received the experimental medicine (UCB0942).

Arm type	Placebo
Investigational medicinal product name	UCB0942
Investigational medicinal product code	UCB0942
Other name	Padsevonil
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets in 2 strengths: 100 mg and 200 mg.

100 mg and 200 mg tablets have the same size and appearance.

Arm title	UCB0942/UCB0942
------------------	-----------------

Arm description:

Subjects received UCB0942.

Arm type	Experimental
Investigational medicinal product name	UCB0942
Investigational medicinal product code	UCB0942
Other name	Padsevonil
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets in 2 strengths: 100 mg and 200 mg.

100 mg and 200 mg tablets have the same size and appearance.

Number of subjects in period 1	Placebo/UCB0942	UCB0942/UCB0942
Started	27	28
Completed	26	24
Not completed	1	4
AE, non-fatal	-	1
Hepatitis Positivity	-	1
Lack of efficacy	1	2

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were collected from Baseline until Safety Follow Up Visit (up to Week 28).

Adverse event reporting additional description:

Baseline Characteristics refer to the Safety Set consisting of all subjects in the Randomized Set who received at least 1 dose of Investigational Medicinal Product (IMP). 2 subjects reported multiple Serious Adverse Events (SAEs).

Assessment type	Non-systematic

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 September 2015	<p>Protocol Amendment 1 (dated 16-Sep-2015) was implemented after the date of first patient first visit (FPFV on 28-Aug-2015). Two subjects were randomized at the time of the amendment. The rationale for this amendment was to add an echocardiogram during dosing in response to a request from the Federal Institute for Drugs and Medical Devices (Bundesinstitut für Arzneimittel und Medizinprodukte). This echocardiogram was added at Day OP22.</p> <p>In addition, the following changes were made:</p> <ul style="list-style-type: none">- It was clarified that either urine or serum pregnancy tests could be used for all visits.- It was pointed out that the decision to continue in the OLE study (EP0073) occurred at Day OP43.- Clarification on the procedure for dose reduction in cases of poor tolerability of UCB0942 400 mg bid (ie, reduction to UCB0942 200 mg bid and in some cases to UCB0942 100 mg bid).- The withdrawal criteria for elevated transaminases were reworded as the previous description was not clear.
19 November 2015	<p>Protocol Amendment 2 (dated 19-Nov-2015) was implemented after 22 subjects were randomized. The rationale for this amendment was to make the video monitoring language in the protocol more flexible so that sites/Investigators could perform this according to their usual practice. This new language also allowed video- electroencephalogram (EEG) monitoring as some sites did not perform video-only monitoring. A second change was the wording of the drug misuse exclusion criterion. As is customary in most UCB protocols, exclusion for drug misuse is only applicable if the Investigator deems that study participation is either a risk to the subject or that the drug misuse could confound the outcomes measured in the study. The wording of this exclusion criterion was changed to match that of other UCB studies.</p>
13 May 2016	<p>Protocol Amendment 3 (dated-13 May-2016) was implemented after 35 subjects were randomized. The rationale for this amendment was to add and describe an optional interim analysis for purposes of planning and designing of future studies. Other reasons for the amendment included the following:</p> <ul style="list-style-type: none">- To add an exploratory objective, variable and associated assessment (Diary Addendum). <p>Note that this was already part of the study, but not clearly described in the protocol.</p> <ul style="list-style-type: none">- To clarify procedures for dosing when there was intolerance to IMP during the Inpatient Period.- To allow and specify flexibility in dosing during the Outpatient Maintenance Period.- To further specify which subjects required an echocardiogram at 6 months after the last dose of UCB0942.- To expand the range of body mass index (BMI) allowed for inclusion in the study.- To revise procedures for assessment of suicidality using the Columbia-Suicide Severity Rating Scale (C-SSRS) (specifically, the C-SSRS withdrawal criterion) in line with revision to UCB SOP, which became effective on 01-Apr-2016.- To update the protocol information pertaining to potential drug-induced liver injury (PDILI) <p>(exclusion criteria, withdrawal criteria, adverse events (AEs) of special interest, and assessments) based on new standard language which was being applied across all protocols at UCB. Note that these additions do not reflect a change in the known safety of the compound.</p>

10 October 2016	<p>Protocol Amendment 4 (dated 10-Oct-2016) was implemented after all subjects were randomized. The rationale for this amendment was to describe a tiered approach to database lock and unblinding.</p> <p>Other changes included:</p> <ul style="list-style-type: none"> - Correction of an inconsistency between the Summary section and the Study Design section pertaining to allowable dose changes - Clarification of the reporting period for AEs - Specification that the Baseline version of the Seizure Severity Questionnaire (SSQ) was to be used in all instances where it was administered - Correction of the number of questions in the SSQ from 11 to 10 - Correction of several cross references - Other minor administrative changes
-----------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
