

Clinical trial results:

A 3-Arm Phase 2 Double-Blind Randomized Study of Carboplatin, Pemetrexed Plus Placebo versus Carboplatin, Pemetrexed plus 1 or 2 Truncated Courses of Demcizumab in Subjects with Non-Squamous Non-Small Cell Lung Cancer

Summary

EudraCT number	2014-003356-30
Trial protocol	ES BE IT DE
Global end of trial date	07 April 2017

Results information

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 April 2017
Global end of trial reached?	Yes
Global end of trial date	07 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy of Arm 1 to Arm 2 and Arm 1 to Arm 3 in subjects with 1st-line stage IV non-squamous non-small cell lung cancer

Protection of trial subjects:

In the absence of unacceptable toxicities or disease progression per RECIST v1.1, subjects continued to receive study treatment. Regardless of discontinuation of one, two, or all three study drugs, subjects could continue on study with assessments. Once discontinuation criteria for the study were met (disease progression, use of other anticancer therapy, subject or investigator decision or protocol non-compliance), a termination visit occurred ≤ 14 days later. Subjects who did not meet the criteria to receive the second 4-cycle course of placebo or demcizumab continued to receive maintenance pemetrexed per protocol without demcizumab or placebo.

To reduce gastrointestinal and hematologic toxicity, subjects received oral folic acid of ≥ 400 μ g daily for at least 5 of the 7 days preceding the first dose of pemetrexed and continued daily during the full course of therapy and for 21 days after the last dose of pemetrexed. Subjects also received an intramuscular injection of vitamin B12 1000 μ g during the week preceding the first dose of pemetrexed and then every 63 days while being treated with pemetrexed. Unless contraindicated, subjects also received dexamethasone 4 mg orally twice daily on the day before, the day of, and the day after pemetrexed administration to reduce the risk of developing skin rash.

Background therapy:

Carboplatin and pemetrexed were administered once every 3 weeks for 4 cycles and then pemetrexed only was administered as once every 3 weeks as maintenance therapy.

Evidence for comparator:

Placebo was used as reference therapy. There were no any patients treated with placebo as a single medication. The placebo was used only as a comparator in addition to standard treatment scheme.

Actual start date of recruitment	03 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Australia: 33
Country: Number of subjects enrolled	United States: 20
Worldwide total number of subjects	82
EEA total number of subjects	29

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	49
From 65 to 84 years	33
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 55 active centers in North America, Western Europe, and Australia. This was a randomized, double-blind, 3-arm (1:1:1) study in subjects with first-line Stage IV non-squamous NSCLC.

Pre-assignment

Screening details:

Subjects aged ≥ 21 years with cytologically or histologically confirmed Stage IV non-squamous NSCLC were included. Subjects were not included if they had histologically or cytologically documented, advanced, mixed non-small cell and small cell tumors or mixed adenosquamous carcinomas.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/placebo arm (Arm 1)

Arm description:

Placebo plus pemetrexed and carboplatin (4 cycles), pemetrexed (4 cycles), placebo plus pemetrexed (4 cycles).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A necessary amount placebo was withdrawn to obtain the required dose and diluted with 5% dextrose in water, USP, to a total volume of 250 ml.

Placebo was a clear to slightly opalescent, colorless to slightly yellow, liquid formulation of 50 mM histidine, 100 mM sodium chloride, 45 mM sucrose, and 0.01% (v/v) polysorbate-20, pH 6.0. Placebo was administered first, followed by pemetrexed, and then carboplatin immediately afterwards.

Arm title	Demcizumab/placebo arm (Arm 2)
------------------	--------------------------------

Arm description:

Demcizumab plus pemetrexed and carboplatin (4 cycles), pemetrexed (4 cycles), placebo plus pemetrexed (4 cycles).

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

A necessary amount placebo was withdrawn to obtain the required dose and diluted with 5% dextrose in water, USP, to a total volume of 250 ml.

Placebo was a clear to slightly opalescent, colorless to slightly yellow, liquid formulation of 50 mM histidine, 100 mM sodium chloride, 45 mM sucrose, and 0.01% (v/v) polysorbate-20, pH 6.0. Placebo

was administered first, followed by pemetrexed, and then carboplatin immediately afterwards.

Investigational medicinal product name	Demcizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Demcizumab was supplied at a concentration of 10 mg/mL in a 25-mL single-use glass vial filled to 20 mL to deliver a total of 200 mg per vial. Demcizumab and placebo vials were to be refrigerated at 2°C to 8°C. Demcizumab and placebo were not to be shaken or frozen.

Demcizumab 5 mg/kg or placebo was administered once every 3 weeks for 4 cycles (i.e., the last administration on Day 63). A second course of Demcizumab 5 mg/kg or placebo was administered once every 3 weeks for 63 days starting at Day 168 only if they met the original cardiac-related eligibility criteria (see exclusion criterion 21), they did not develop pulmonary hypertension or heart failure while on study, and blood pressure was controlled to $\leq 140/90$ mm Hg.

Arm title	Demcizumab/demcizumab arm (Arm 3)
------------------	-----------------------------------

Arm description:

Demcizumab plus pemetrexed and carboplatin (4 cycles), pemetrexed (4 cycles), demcizumab plus pemetrexed (4 cycles).

Arm type	Experimental
Investigational medicinal product name	Demcizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Demcizumab was supplied at a concentration of 10 mg/mL in a 25-mL single-use glass vial filled to 20 mL to deliver a total of 200 mg per vial. Demcizumab and placebo vials were to be refrigerated at 2°C to 8°C. Demcizumab and placebo were not to be shaken or frozen.

Demcizumab 5 mg/kg or placebo was administered once every 3 weeks for 4 cycles (i.e., the last administration on Day 63). A second course of Demcizumab 5 mg/kg or placebo was administered once every 3 weeks for 63 days starting at Day 168 only if they met the original cardiac-related eligibility criteria (see exclusion criterion 21), they did not develop pulmonary hypertension or heart failure while on study, and blood pressure was controlled to $\leq 140/90$ mm Hg.

Primary: To compare the Investigator-assessed (RECIST) v1.1 response rate in the treatment arms

End point title	To compare the Investigator-assessed (RECIST) v1.1 response rate in the treatment arms
End point description: To compare the Investigator-assessed Response Evaluation Criteria in Solid Tumors (RECIST) v1.1 response rate (unconfirmed) in placebo/placebo arm to Demcizumab/placebo arm and demcizumab/demcizumab arm combined in subjects with first-line Stage IV NSCLC. The primary endpoint of response rate was based on Investigator-assessed BOR and was defined as the best unconfirmed response determined by RECIST version 1.1 recorded from the start of the treatment until disease progression in the following order of importance: CR, PR, SD, progressive disease (PD), not evaluable, or missing. The number and percentage of subjects in each disease response category (CR, PR, SD, PD, not evaluable, and missing) were summarized by treatment arm.	
End point type	Primary
End point timeframe: The time point of when a subject had progressed (censor = 0) their time to progression was determined by the date of progression (date of RECIST response assessment or date of death) minus start date + 1.	

End point values	Placebo/placebo arm (Arm 1)	Demcizumab/placebo arm (Arm 2)	Demcizumab/demcizumab arm (Arm 3)

Statistical analyses

Statistical analysis title	Kaplan-Meier model
Statistical analysis description:	
The Kaplan-Meier method was used to estimate both the survival curves and the median survival time. The 95% CI for the median survival time was calculated. A p-value for treatment effect was generated using a stratified Cox proportional hazards model.	
Comparison groups	Demcizumab/placebo arm (Arm 2) v Demcizumab/demcizumab arm (Arm 3) v Placebo/placebo arm (Arm 1)
Number of subjects included in analysis	82
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.0401
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.13
upper limit	0.95

Notes:

[1] - Based on RECIST v1.1. Response outcomes from an assessment done anytime less than Day 35 were considered as not evaluable unless the response assessment was PD.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All safety analyses were conducted on the safety population. Baseline for safety analysis was the last assessment prior to treatment.

Adverse event reporting additional description:

All reported AEs were mapped to standard MedDRA coding terms, grouped by system organ class (SOC) and preferred term (PT) and tabulated by treatment arm.

Assessment type	Systematic

Hyperkalaemia			
subjects affected / exposed	2 / 25 (8.00%)	1 / 28 (3.57%)	3 / 29 (10.34%)
occurrences (all)	2	1	3
Hypokalaemia			
subjects affected / exposed	4 / 25 (16.00%)	1 / 28 (3.57%)	0 / 29 (0.00%)
occurrences (all)	4	1	0
Hypophosphataemia			
subjects affected / exposed	2 / 25 (8.00%)	1 / 28 (3.57%)	2 / 29 (6.90%)
occurrences (all)	2	1	2

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
