Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 September 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 March 2017
Global end of trial reached?	Yes
Global end of trial date	07 September 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to compare the antiretroviral activity of doravirine, tenofovir, lamivudine (MK-1439A), a single-tablet, once-daily (q.d.) fixed-dose combination (FDC) containing doravirine (DOR) 100 mg + lamivudine (3TC) 300 mg + tenofovir disoproxil fumarate (TDF) 300 mg, with ATRIPLA™, a single-tablet FDC containing efavirenz 600 mg + emtricitabine 200 mg + tenofovir disoproxil fumarate 300 mg, in treatment-naïve participants infected with human immunodeficiency virus (HIV). The primary hypothesis was that doravirine, tenofovir, lamivudine q.d. is non-inferior to ATRIPLA™ q.d. as assessed by the proportion of participants with HIV-1 ribonucleic acid (RNA) <50 copies/mL (by the Abbott RealTime HIV-1 Assay) at Week 48.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 3
Country: Number of subjects enrolled	Belgium: 7
Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	Chile: 49
Country: Number of subjects enrolled	Colombia: 41
Country: Number of subjects enrolled	Denmark: 6
Country: Number of subjects enrolled	Germany: 25
Country: Number of subjects enrolled	Guatemala: 20
Country: Number of subjects enrolled	Honduras: 7
Country: Number of subjects enrolled	Israel: 5
Country: Number of subjects enrolled	Mexico: 27
Country: Number of subjects enrolled	New Zealand: 7
Country: Number of subjects enrolled	Peru: 32
Country: Number of subjects enrolled	Portugal: 27
Country: Number of subjects enrolled	Russian Federation: 54
Country: Number of subjects enrolled	South Africa: 66

Country: Number of subjects enrolled	Spain: 16
Country: Number of subjects enrolled	Switzerland: 11
Country: Number of subjects enrolled	Taiwan: 37
Country: Number of subjects enrolled	Thailand: 74
Country: Number of subjects enrolled	United Kingdom: 32
Country: Number of subjects enrolled	United States: 176
Worldwide total number of subjects	734
EEA total number of subjects	81

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	730
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Treatment-naïve participants with HIV-1 infection have been recruited at 141 study sites worldwide. The present results include results from the base study (first 96-weeks of the study) along with study extension 1 (week 96 - 192), study extension 2 (week 192 - 288), and study extension 3 (week 288 - 384).

Pre-assignment

Screening details:

Randomization in base study was stratified by screening HIV-1 ribonucleic acid (RNA [$\leq 1000,000$ or $> 100,000$ copies/mL]), and Chronic Hepatitis B and/or C infection status (yes or no).

Period 1

Period 1 title	Base Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	MK-1439A (DOR/3TC/TDF from Day 1)

Arm description:

Treatment-naïve participants with HIV-1 infection took MK-1439A, a single-tablet fixed dose combination (FDC) containing doravirine (DOR) 100 mg + lamivudine (3TC) 300 mg + tenofovir disoproxil fumarate (TDF) 300 mg, once daily (q.d.) by mouth for 96 weeks. Participants also took 1 placebo tablet matched to ATRIPLA™ q.d. by mouth for 96 weeks in order to maintain blinding. Eligible participants from the Base Study (Day 1 to Week 96) may have entered open-label optional study extensions to receive MK-1439A (FDC containing DOR 100 mg + 3TC 300 mg + TDF 300 mg), taken q.d. during Study Extension 1 (Weeks 96 to 192), Extension 2 (Weeks 192 to 288), and Extension 3 (Weeks 288 to 384).

Arm type	Active comparator
Investigational medicinal product name	Doravirine, Tenofovir, Lamivudine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One doravirine, tenofovir, lamivudine tablet taken q.d. by mouth.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets matched to ATRIPLA™ q.d.

Arm title	ATRIPLA™ (Switch from EFV/FTC/TDF at Week 96)
------------------	---

Arm description:

Treatment-naïve participants with HIV-1 infection took ATRIPLA™, a single-tablet FDC containing efavirenz (EFV) 600 mg + emtricitabine (FTC) 200 mg + tenofovir disoproxil fumarate (TDF) 300 mg (equivalent to 245 mg tenofovir disoproxil), q.d. by mouth for 96 weeks. Participants also took 1 placebo tablet matched to MK-1439A q.d. by mouth for 96 weeks in order to maintain blinding. Eligible participants from the Base Study (Day 1 to Week 96) may have entered open-label optional study extensions to receive MK-1439A (FDC containing DOR 100 mg + 3TC 300 mg + TDF 300 mg), taken q.

d. during Study Extension 1 (Weeks 96 to 192), Extension 2 (Weeks 192 to 288), and Extension 3 (Weeks 288 to 384).

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets matched to doravirine, tenofovir, lamivudine.

Investigational medicinal product name	ATRIPLA™
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One ATRIPLA™ tablet taken by mouth.

Number of subjects in period 1	MK-1439A (DOR/3TC/TDF from Day 1)	ATRIPLA™ (Switch from EFV/FTC/TDF at Week 96)
Started	368	366
Treated	364	364
Completed	296	276
Not completed	72	90

Secondary: Plasma concentration of doravirine at Week 48

End point title	Plasma concentration of doravirine at Week 48 ^[19]
-----------------	---

End point description:

Plasma samples were collected for analysis of doravirine concentration at Week 48. A total of 2 samples were collected: 1 prior to dosing and 1 collected between 0.5 and 2 hours post-dose. The analysis population consists of all randomized participants in the MK-1439A arm who received ≥1 dose of study drug and had doravirine concentration data available.

End point type	Secondary
----------------	-----------

End point timeframe:

0 hours post-dose and 2 hours post-dose on Week 48

Notes:

[19] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: plasma concentrations from this trial were included in this population PK analysis of pooled phase data.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 96 weeks

Adverse event reporting additional description:

All cause-mortality: all allocated participants. Serious and non-serious AEs: all allocated participants who received ≥ 1 dose of study treatment. Per protocol, non-serious adverse event data were not collected during Study Extensions 2 and 3.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 May 2015	AM1: Instructions to the Inclusion Criteria were added to direct investigators to provide appropriate guidance to subjects about the use of contraceptives after study completion. Modified Exclusion Criterion added to include the mutations D67N and K70R to those mutations indicative of resistance to emtricitabine, lamivudine, and tenofovir.
03 June 2015	AM2: Exploratory objective pharmacokinetics/pharmacodynamics changed to a secondary objective. Included updated list of medications prohibited during the use of ATRIPLA (EFV/FTC/TDF), and specified additional visits for the collection of plasma for potential viral resistance testing. Inclusion and Exclusion criteria added to include baseline hemoglobin threshold, and exclusion of subjects with severe hepatic impairment.
03 August 2015	AM3: Added text to explain the rationale for the selected doses of the lamivudine and TDF components of MK-1439A and include text to disallow concomitant use of interferon. Also clarified that sites would receive the calculated creatinine clearance in the laboratory reports from the central laboratory.
28 November 2016	AM4: Added open-label study extension 1 for 2 years to collect long-term efficacy and safety data. Clarified visits during which plasma samples were tested for resistance, and removed rosuvastatin as prohibited medication due to an interaction with DOR. Specified that concomitant medications prohibited due to interactions with EFV/FTC/TDF in the base study were allowed in the study extension.
05 February 2019	AM5: Added open-label study extension 2 to provide continued access to MK-1439A until the drug is available locally in countries participating in the trial or for an additional 2 years (whichever comes first). Added oxcarbazepine and rifapentine as prohibited medications/therapy due to interaction with MK-1439. Clarified that evaluation of Immune Reconstruction Syndrome (IRIS) causality applies only during the base study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
