Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 March 2018
Global end of trial reached?	Yes
Global end of trial date	29 March 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To compare the anti-tumor efficacy of oral single-agent rociletinib, as measured by investigator assessment of the PFS, with that of single-agent cytotoxic chemotherapy in patients with EGFR-mutated, advanced/metastatic NSCLC after failure of at least 1 previous EGFR-directed TKI and at least 1 line of platinum-containing doublet chemotherapy

Protection of trial subjects:

A data monitoring committee consisting of 3 of the clinical trial investigators and sponsor personnel met every 3 to 6 months to review and assess the safety and efficacy data, and provide recommendations regarding study continuation/discontinuation and protocol modifications.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 December 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Worldwide total number of subjects	149
EEA total number of subjects	55

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	88
From 65 to 84 years	58
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

149 subjects recruited from 83 sites in 10 countries and randomized (1:1) to treatment with rociletinib or single-agent cytotoxic chemotherapy (investigator's choice of pemetrexed, gemcitabine, docetaxel, or paclitaxel). Crossover to rociletinib treatment, permitted for comparator chemotherapy treated subjects but only after eligibility confirmed.

Pre-assignment

Screening details:

Eligible patients were ≥ 18 years of age with advanced/metastatic NSCLC that had evidence of a tumor with 1 or more activating EGFR mutations (excluding exon 20 insertion) and had undergone a biopsy or surgical resection of either primary or metastatic tumor tissue within 60 days of the first day of treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Rociletinib 500 mg BID

Arm description:

Starting dose of 500mg. Taken orally twice daily (continuous 21 day treatment cycle). Treatment duration until radiographically confirmed disease progression.

Arm type	Experimental
Investigational medicinal product name	Rociletinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Starting dose of 500mg. Taken orally twice daily (continuous 21 day treatment cycle).

Arm title	Rociletinib 625 mg BID
------------------	------------------------

Arm description:

Starting dose of 625mg. Taken orally twice daily (continuous 21 day treatment cycle). Treatment duration until radiographically confirmed disease progression.

Arm type	Experimental
Investigational medicinal product name	Rociletinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Starting dose of 625mg. Taken orally twice daily (continuous 21 day treatment cycle).

Arm title	Chemotherapy
------------------	--------------

Arm description:

Investigator's choice -

Pemetrexed 500 mg/m² given intravenously on Day 1 of each 21-day cycle.

Gemcitabine 1250 mg/m² given intravenously on Day 1 and 8 of each 21-day cycle.

Paclitaxel 80 mg/m² given intravenously on a weekly basis as part of a continuous 21-day cycle; i.e. dosing will be on Days 1, 8, and 15 of each 21-day cycle.

Docetaxel 75 mg/m² (60 mg/m² for patients residing in East-Asian territories) given intravenously on Day 1 of each 21-day cycle, OR

35 mg/m² docetaxel given intravenously on a weekly basis as part of a continuous 21-day cycle; i.e. dosing will be on Days 1, 8, and 15 of each 21-day cycle.

Treatment duration until radiographically confirmed disease progression.

Arm type	Active comparator
Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pemetrexed administered at 500 mg/m² intravenously (IV) on Day 1 of each 21-day cycle.

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Gemcitabine administered at 1,250 mg/m² IV on Days 1 and 8 of each 21-day cycle.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Paclitaxel administered at 80 mg/m² IV weekly as part of a continuous 21-day cycle (Days 1, 8, and 15 of each 21-day cycle).

Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel administered at 75 mg/m² (60 mg/m² in Asian patients) IV on Day 1 of each 21-day cycle, or 35 mg/m² docetaxel IV weekly as part of a continuous 21-day cycle (Days 1, 8, and 15 of each 21-day cycle)

Primary: Progression Free Survival (PFS) According to RECIST Version 1.1 as Determined by Investigator Review (invPFS)

End point title	Progression Free Survival (PFS) According to RECIST Version 1.1 as Determined by Investigator Review (invPFS) ^[1]
End point description: Median InvPFS was calculated as 1+ the number of days from the date of randomization to documented radiographic progression as determined by the investigator, or death due to any cause, whichever occurs first. Progression is defined using Response Evaluation Criteria In Solid Tumors Criteria (RECIST v1.1), as at least a 20% increase in the sum of the longest diameter of target lesions, taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. The appearance of one or more new lesions is also considered progression. 1 patient in the Chemotherapy treatment group was not included in the analysis, due to discontinuation of study shortly after randomization and prior to first dose of study drug.	
End point type	Primary
End point timeframe: Cycle 1 Day 1 to End of Treatment, up to approximately 35 months. This Time Frame includes the cross-over period, however, participants who crossed over to rociletinib were not analyzed for PFS.	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Per EMA feedback, the statistical analyses section can not accommodate the end point results for this study. Therefore, for each end point, all statistical analyses details are provided in the End point values sections.

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Patients With Confirmed Response

End point title	Percentage of Patients With Confirmed Response
-----------------	--

End point description:

Percentage of patients with best overall confirmed response of partial response (PR) or complete response (CR) recorded from the start of the treatment until disease progression or recurrence. Per RECIST v1.1 for target lesions: CR is disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to < 10 mm. PR is at least 30% decrease in the sum of the longest diameter of target lesions, taking as reference the baseline sum of longest diameter. Overall Response (OR) is the best response recorded from the start of the treatment until disease progression/recurrence (taking as reference for progressive disease the smallest measurements recorded since the treatment started). The patient's best response assignment was dependent on the achievement of both measurement and confirmation criteria. 1 patient in the Chemotherapy group was not included in analysis due to discontinuation after randomization and prior to 1st dose.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 Day 1 to End of Treatment, up to approximately 35 months. This Time Frame includes the cross-over period, however, participants who crossed over to rociletinib were not analyzed for best overall confirmed response.

Secondary: Duration of Response (DOR) According to RECIST Version 1.1 as Determined by Investigator Assessment

End point title	Duration of Response (DOR) According to RECIST Version 1.1 as Determined by Investigator Assessment
-----------------	---

End point description:

Median Duration of Response in patients with confirmed response (CR or PR) per investigator. The DOR was measured from date best response is first recorded until first date that progressive disease is objectively documented. For patients who continue treatment post-progression, first date of progression was used for the analysis. Per RECIST v1.1 for target lesions: CR is disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to

<10mm. PR is at least a 30% decrease in sum of the longest diameter of target lesions, taking as reference the baseline sum of longest diameter. Overall Response is the best response from start of the treatment until disease progression/recurrence (taking as reference for progressive disease the smallest measurements recorded since the treatment started). The overall number of patients in the Chemotherapy arm does not include those who crossed over into the Rociletinib treatment groups

No statistical analyses for this end point

Secondary: Plasma PK for Patients Treated with Rociletinib Based on Sparse Sampling

End point title	Plasma PK for Patients Treated with Rociletinib Based on Sparse Sampling ^[14]
-----------------	--

End point description:

Blood samples were drawn for PK analysis at 21 ± 3 day intervals for the first 6 months (Day 1 of Cycles 2 to 7 inclusive). The sample could be taken predose or postdose. Plasma concentrations are presented for Rociletinib and 3 metabolites (M460, M502, M544). Population Description: A small subset of patients treated with rociletinib (ie, patients randomized to receive rociletinib or who crossed over to receive rociletinib following treatment with single agent cytotoxic chemotherapy). Note: 1 sample was analyzed in the 500mg treatment group and 33 samples were analyzed in the 625mg treatment group. 2 patients in the 625mg treatment group had M502 values at upper limit of quantification (ULOQ) which were set as missing values.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycles 2 Day 1 to Cycle 7 Day 1, or approximately 6 months

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per EMA feedback, the statistical analyses section can not accommodate the end point results for this study. Therefore, for each end point, all statistical analyses details are provided in the End point values sections

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were reported from the date of first dose of study drug and until 28 days after last dose of study drug, an average of 6 months.

Adverse event reporting additional description:

If subject experiences the same preferred term (system organ class) multiple times, the subject was counted only once for that preferred term. Treatment Arm/Groups for subjects who crossed over to Rociletinib from Chemotherapy are included. 1 subject in Chemo group was not included due to discontinuation after randomization and prior to first dose.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 October 2014	In global Amendment 1, the planned enrollment was increased to approximately 600 patients, which increased the number of targeted PFS events from 350 to 400 events to strengthen the statistical analyses. Other revisions included clarification/revision of inclusion and exclusion criteria and updates to safety management, such as requiring a follow-up scan to confirm that treated brain metastasis remain controlled without evidence of new lesions, and updated guidance on the management of hyperglycemia.
27 April 2015	Global Amendment 2 included decreasing the starting dose of rociletinib from 625 mg BID to 500 mg BID and specifying that a dose reduction for patients initially treated at 625 mg BID was allowed only if necessitated by unacceptable toxicity. Supportive analysis of Independent radiology review of PFS (irrPFS) and stratification subgroups to the statistical analyses were added. Additional information was provided on the management of prolonged QTC and hyperglycemia, and tumor assessments were revised to minimize scan parameters if not necessary, including exception for scans following discontinuation without progression, to allow for local variations in scan requirements. This global amendment also specified that creatinine clearance ≥ 45 ml/min be used instead of plasma creatinine in the inclusion criteria and single-agent cytotoxic medication sections. Fasting serum glucose within normal ranges was incorporated into the global protocol amendment as an inclusion criterion.
07 September 2016	Extension Phase and Early Termination of the Study -- Clovis announced on 05 May 2016 that enrollment would be terminated due to a decision to halt the clinical development of rociletinib. The purpose of Protocol Amendment 4 was to add a new Extension Phase to allow patients who continued to derive clinical benefit from study treatment to remain on-study, at the discretion of the Principal Investigator, but to avoid unnecessary collection of data that would no longer be analyzed or required for regulatory purposes whilst maintaining an appropriate level of safety monitoring. Patients were administered rociletinib daily at 500 mg BID (or 625 mg BID under Protocol Amendment 1). A new schedule of assessments for the Extension Phase, as well as a complete description of procedures, was provided, which replaced all prior assessment schedules. Treatment could continue until disease progression or intolerable toxicity; for patients who wished to continue rociletinib treatment post-progression or for patients who wished to cross over to rociletinib treatment following progression on chemotherapy, a full exploration of alternative treatment options between patients and their treating physicians took place prior to making that decision.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 May 2016	Due to an internal corporate decision announced on 05 May 2016 to suspend the development of rociletinib, no new patients were permitted to enter screening for enrollment into any ongoing Clovis-sponsored rociletinib clinical study. Patients who were in screening as of that date could enroll on or before 12 May 2016 if they met eligibility requirements. At this time, there were 149 patients randomized.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to early study termination, only 149 of 600 planned patients were randomized.

Notes:
