

Clinical trial results:

A 24-week, multicenter, exploratory, two arm study to assess the effect of Dimethyl fumarate on Immune-Modulatory Action on T cells in patients with relapsing remitting Multiple Sclerosis

Summary

EudraCT number	2014-003481-25
Trial protocol	DE
Global end of trial date	07 May 2018

Results information

Result version number	v1 (current)
This version publication date	04 January 2020
First version publication date	04 January 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 May 2018
Global end of trial reached?	Yes
Global end of trial date	07 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is an exploratory study design, which allows analysis of multiple immune parameters derived from peripheral blood mononuclear cells (PBMCs) from patients with relapsing remitting multiple sclerosis before and during immune-modulatory treatment with dimethyl fumarate (Tecfidera) in comparison to PBMCs from healthy subjects.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and the ICH Guidelines in Good Clinical Practice. The study was not started before the competent ethics committee had given a favorable opinion. Written informed consent was obtained from all patients and the study was only conducted as approved by the Ethics committee and the competent authority. Amendments were only implemented after approval.

Background therapy:

A standard course of corticosteroids (methylprednisolone) on an inpatient or outpatient basis was allowed for treatment of relapses at any time during the study as clinically warranted. Steroid treatment should consist of 3-5 days and up to 1,000 mg methylprednisolone/day intravenously.

Evidence for comparator:

Healthy subjects were used as a reference group and were not treated.

Actual start date of recruitment	05 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 67
Worldwide total number of subjects	67
EEA total number of subjects	67

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	67
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The RRMS (relapsing remitting multiple sclerosis) patients were recruited from three university hospitals and one neurological specialist practice throughout Germany. Healthy subjects were only recruited at the Universitätsklinikum Münster. The recruitment period was from June 2015 to January 2018.

Pre-assignment

Screening details:

The study included untreated healthy subjects and patients with RRMS according to the 2010 revised McDonald's criteria who were either treatment-naïve (i.e. no dimethyl fumarate treatment for at least 1 month) or willing to switch from conventional first-line immunomodulatory therapy (beta-interferons, glatiramer acetate) to dimethyl fumarate.

Pre-assignment period milestones

Number of subjects started	67
Number of subjects completed	58

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Not meeting inclusion criteria: 8
Reason: Number of subjects	Consent withdrawn by subject: 1

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Dimethyl fumarate (DMF) (RRMS patients)
------------------	---

Arm description:

RRMS patients treated with dimethyl fumarate.

Arm type	Experimental
Investigational medicinal product name	Tecfidera
Investigational medicinal product code	
Other name	Dimethyl fumarate
Pharmaceutical forms	Gastro-resistant capsule, hard
Routes of administration	Oral use

Dosage and administration details:

RRMS patients received dimethyl fumarate (Tecfidera) from week 0 to week 24. Dimethyl fumarate (Tecfidera®) treatment was initiated by daily administration of 120 mg Tecfidera® p.o. in the morning in week 0. At week 1, the dose was increased to 120 mg Tecfidera® p.o. twice daily, split into a morning and an evening dose. At week 2, the daily dose was further increased to 240 mg Tecfidera® p.o. in the morning and 120 mg Tecfidera® p.o. in the evening. Finally at week 3, the dose was increased to the final daily dose of 240 mg Tecfidera® p.o. in the morning and 240 mg Tecfidera® p.o. in the evening and maintained throughout the study. Study participants were able to perform an optional 24-week follow-up Phase. No study treatment was performed in the follow-up phase. However, RRMS patients were able to continue treatment with dimethyl fumarate (Tecfidera).

Arm title	No treatment (Healthy subjects)
------------------	---------------------------------

Arm description:

Healthy subjects who have not been treated.

Arm type	No intervention
----------	-----------------

Number of subjects in period 1^[1]	Dimethyl fumarate (DMF) (RRMS patients)	No treatment (Healthy subjects)
Started	42	16
End of core study phase (Week 24)	37	14
Completed	33	14
Not completed	9	2
Consent withdrawn by subject	1	1
Relapse	1	-
End of study after core study phase	2	-
Adverse event, non-fatal	2	-
Pregnancy	2	1
Lost to follow-up	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 51 RRMS patients were enrolled in the study and assessed for eligibility. Because 8 patients did not meet the inclusion criteria and one patient withdrew consent before start of treatment, only 42 RRMS patients entered the baseline period.

Baseline characteristics

Reporting groups

Reporting group title	Dimethyl fumarate (DMF) (RRMS patients)
Reporting group description: RRMS patients treated with dimethyl fumarate.	
Reporting group title	No treatment (Healthy subjects)

End points

End points reporting groups

Reporting group title	Dimethyl fumarate (DMF) (RRMS patients)
Reporting group description: RRMS patients treated with dimethyl fumarate.	
Reporting group title	No treatment (Healthy subjects)
Reporting group description: Healthy subjects who have not been treated.	

Primary: Number of lymphocytes in PBMCs

End point title	Number of lymphocytes in PBMCs ^{[1][2]}
End point description: The number of lymphocytes in the PBMC (peripheral blood mononuclear cell) population during DMF treatment.	
End point type	Primary
End point timeframe: Months 0, 2, 4, 6 and 11.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Since this is an explorative study, the endpoints were only evaluated descriptively.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Because there were not enough samples from healthy subjects, this arm was not evaluated.

End point values	Dimethyl fumarate (DMF) (RRMS patients)			
Subject group type	Reporting group			
Number of subjects analysed	34			
Units: Lymphocytes (percent of PBMCs)				
median (inter-quartile range (Q1-Q3))				
Month 0 (n = 34)	79.13 (74.27 to 84.97)			
Month 2 (n = 19)	76.78 (73.23 to 85.05)			
Month 4 (n = 19)	77.14 (72.71 to 81.83)			
Month 6 (n = 34)	72.75 (68.18 to 81.91)			
Month 11 (n = 19)	73.76 (68.59 to 80.86)			

Statistical analyses

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 October 2015	<p>Inclusion and exclusion criteria of the protocol have been amended:</p> <ul style="list-style-type: none">• The time limit for disease-modifying treatment before the start of the trial was reduced from 6 months to one month (the procedure remained unchanged for patients who received IFN β-1 or glatiramer acetate at the time of screening).• Previously, the test for tuberculosis, HIV and hepatitis B and C had to be performed during screening. After the amendment, test results not older than 3 months at the time of screening were also allowed.• Limit values for certain laboratory parameters have been removed. Only clinical significant deviations of the laboratory values lead to the exclusion of the patient (decision of the investigator). <p>In addition, the following has been modified in the protocol:</p> <ul style="list-style-type: none">• In order to exclude pregnancy at the time of screening, a urine pregnancy test should now also be allowed (previously only a blood test was allowed).• The analysis of laboratory parameters (clinical chemistry) which are not recommended or obligatory according to the summary of product characteristics or the Krankheitsbezogenen Kompetenznetzes Multiple Sklerose should no longer be performed.
25 April 2017	<p>Secondary objectives have been modified:</p> <ul style="list-style-type: none">• In order to examine the cytokine production of the cells, only the cytokines GM-CSF, IFNγ, TNF-α, IL-22 und IL-17A should be examined (the analysis of IL-2, IL-4, IL-10 and IL-21 was removed from the protocol). <p>Secondary objectives have been removed:</p> <ul style="list-style-type: none">• Investigating the differentiation capability of T cells and the ability of regulatory T cells to suppress the effector T cell response were removed from the protocol. <p>Secondary objectives have been added:</p> <ul style="list-style-type: none">• Evaluation of changes in mitochondrial energy metabolism was added to the protocol. <p>Sample size / change to the power analyses:</p> <ul style="list-style-type: none">• Initially, it was planned to recruit 60 RRMS patients. Due to new external information concerning the mean change in Th17 cells, the number of RRMS patients was decreased to 50 patients and the power analysis was repeated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
