Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 August 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 August 2016
Global end of trial reached?	Yes
Global end of trial date	29 August 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the change from baseline in hemoglobin A1c (HbA1c) achieved with exenatide once weekly (EQW) added to titrated basal insulin glargine to placebo added to titrated basal insulin glargine, with or without metformin, after 28 weeks of double-blind treatment.

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with International Council for Harmonisation/Good Clinical Practice and applicable regulatory requirements and the AstraZeneca policy on Bioethics.

Background therapy:

Insulin glargine titrated to achieve a target glucose of 4.0 to 5.5 millimoles per liter [72 to 99 milligram per deciliter (mg/dL)]; metformin as prescribed by the Investigator.

Evidence for comparator: -

Actual start date of recruitment	06 September 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 59
Country: Number of subjects enrolled	Poland: 47
Country: Number of subjects enrolled	Romania: 45
Country: Number of subjects enrolled	Slovakia: 38
Country: Number of subjects enrolled	United States: 250
Country: Number of subjects enrolled	South Africa: 22
Worldwide total number of subjects	461
EEA total number of subjects	189

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	353
From 65 to 84 years	108
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in 107 centers globally between 06 September 2014 and 29 August 2016.

Pre-assignment

Screening details:

The study had a Screening Visit, an 8-week insulin dose optimization phase, followed by a 28-week randomized, double-blind treatment phase. A total of 464 participants were randomized and entered the double-blind Treatment Period. Of which, 3 participants from 1 center in the United States have been excluded from analyses.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Exenatide

Arm description:

Exenatide 2 milligram (mg) 1 time per week + titrated basal insulin glargine with or without metformin.

Arm type	Experimental
Investigational medicinal product name	Exenatide
Investigational medicinal product code	
Other name	Bydureon
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

2 mg one time per week, injection

Arm title	Placebo
------------------	---------

Arm description:

Placebo (matching with exenatide) 1 time per week + titrated basal insulin glargine with or without metformin.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching with exenatide one time per week, injection

Number of subjects in period 1	Exenatide	Placebo
Started	232	229
Received treatment	231	229
Safety analysis set	231	229
Intent-to-treat (ITT) analysis set	230	228
Completed	212	207
Not completed	20	22
Adverse event, serious fatal	-	1
Consent withdrawn by subject	4	6
Adverse event, non-fatal	7	4
Unspecified	3	8
Lost to follow-up	5	3
Did not receive treatment	1	-

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Baseline (Day 1) up to Week 28

Adverse event reporting additional description:

Safety analysis set included all participants who received at least 1 dose of randomized study medication. Total number of Deaths is reported for the overall study period, including the off-treatment period; Serious and Non-serious adverse event data is reported for the on-treatment period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 October 2014	Outcome measure of secondary objective was modified to specify "major" hypoglycemia. Insulin glargine, metformin, and rescue therapy would be sourced locally. Exclusion criterion #25 was included as inclusion criterion #9. Cut off for serum calcitonin concentration was decreased to 40 picogram per milliliter. Tobacco, caffeine, and strenuous exercise were added to list of restrictions 24 hours prior to each visit. Discontinuation procedures were amended to include a review when Investigator deemed it necessary to temporarily stop and re-start study medication. Discontinued participants were required to complete Follow-up visit (Visit 15), and who had symptoms of hypoglycemia were to record glucose measurements and episode details in participant diary. Study Plan updated to clarify when study diary was given out, procedures for collecting study diary, when study medication was dispensed and used/unused medication was collected. Text added to differentiate procedures for Early Termination and Rescue Visits, to indicate IVRS should be called on day of consent, to clarify that participants undergoing rescue therapy were to perform 6 point self-monitored blood glucose profile before returning for Rescue Visit, to indicate that staff monitored study medication administration at study visits, and to indicate when MTTs should be performed. Text regarding MTT updated to include instruction on MTT timing and for how MTT should have been performed. Blood pressure measurement instructions were modified. Investigators should contact medical monitor if a participant developed a liver function test abnormality. Hy's Law text updated to state that cases meeting any of identification criteria required an unscheduled laboratory draw. Hypoglycemia assessment updated with criteria for classification. Sponsor should have been contacted regarding hypoglycemia events. Added use of SU as a stratification factor for exploratory analyses. Clarified assessment of causality for adverse events.
20 February 2015	The proportion of participants rescued or discontinued for lack of glycemic control at Week 28 was added as an exploratory outcome measure. Inclusion criterion #7 was clarified to state that participants may only take basal insulin glargine once daily. Exclusion criterion #32 was amended to include participation in an interventional clinical trial and to clarify that only administration of an investigational drug would have rendered a participant as ineligible. The Study Plan and Timing of Procedures was updated. This update clarified study visit windows, when used/unused study medication was to be collected, when training for study drug administration was to be received by the participant, and visits when rescue medication could have been dispensed. Review of potential cardiovascular (CV) event triggers was added to all visits where adverse events and concomitant medication were reviewed. Text was added to indicate that metformin should be taken with the next meal, and does not need to be taken at the study center, and that urine should be collected right before time 0 of the MTT. Text was added to indicate that study medication may be dispensed at a Rescue Visit. Text was added to clarify that potential CV event triggers would be reviewed at specified study visits. Text was added to indicate that urine was collected right before time 0 of the MTT. Text was amended to indicate that antibody results would be presented in the CSR. Text was added to clarify that the baseline physical examination data are collection at Visit 1. Text was added to clarify that there is no restriction on fathering children during the study. Text was added to describe the adjudication of CV events.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Please note that the data from 4 subjects enrolled at one site were omitted due to potential scientific misconduct at that site. Study conclusions remain unchanged.

Notes:
