General information about the trial

Main objective of the trial:

To determine a safe and effective dose of P03277 based on a comparison of Contrast to Noise Ratio (CNR) between several doses, 0.025, 0.05, 0.1, 0.2 mmol/kg, of P03277 and gadobenate dimeglumine (MultiHance®) at 0.1 mmol/kg.

Protection of trial subjects:

This trial has been conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, that are consistent with Good Clinical Practice (GCP) according to International Conference on Harmonisation (ICH) guidelines and with the applicable regional/local regulations of the country in which the trial was conducted.
The safety of subjects was assessed over 1 day follow-up period after each MRI visit, for vital signs, ECG, injection site tolerance, clinical laboratory parameters and monitoring of adverse events.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Assessor, Subject

Arms

Arm title	Overall population

Arm description:

All subjects who had received at least one injection of contrast agent, regardless of the quantity.

Arm type	Experimental
Investigational medicinal product name	P03277
Investigational medicinal product code	
Other name	Gadopiclenol
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

One of the four doses (0.025, 0.05, 0.1 or 0.2 mmol/kg body weight) in a single intravenous injection.

Investigational medicinal product name	Gadobenate dimeglumine
Investigational medicinal product code	
Other name	MultiHance
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

0.1 mmol/kg body weight in a single intravenous injection.

Number of subjects in period 1[1]	Overall population
Started	272
Completed	238
Not completed	34
Consent withdrawn by subject	9
Adverse event, non-fatal	2
Other reasons	20
Lost to follow-up	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.
Justification: Among the 312 screened subjects, 32 subjects were screening failure mainly due to not fulfillment of inclusion criteria/ presence of non-inclusion criteria or due to consent withdrawal. Therefore 280 subjects were randomized. Eight randomized subjects were prematurely withdrawn before receiving the first contrast agent administration (2 for withdrawal of subject's consent, 1 for adverse event and 5 for other reason).
