

Clinical trial results:

A Multicenter Extension Study of the Efficacy, Tolerability, and Safety of Immune Globulin Subcutaneous (Human) IgPro20 in Subjects With Primary Immunodeficiency (PID)

Summary

EudraCT number	2014-003605-15
Trial protocol	Outside EU/EEA
Global end of trial date	16 June 2010

Results information

Result version number	v1 (current)
This version publication date	13 July 2016
First version publication date	06 August 2015

Trial information

Trial identification

Sponsor protocol code	IgPro20_3001
-----------------------	--------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00719680
WHO universal trial number (UTN)	-

Scientific contact	Trial Registration Co-ordinator, CSL Behring, clinicaltrials@cslbehring.com

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 May 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 June 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to determine whether a long-term use of a new human immunoglobulin G with proline (IgPro) is safe and effective in the treatment of primary immunodeficiency.

Protection of trial subjects:

This study was conducted in accordance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) guidelines, the Declaration of Helsinki (version of 1996), and standard operating procedures for clinical research and development at CSL Behring and the Clinical Research Organizations (CROs) involved. Compliance with these requirements also constitutes conformity with the ethical principles of the Declaration of Helsinki. The study was conducted under a protocol reviewed and approved by an IRB; the study was conducted by scientifically and medically qualified persons; the benefits of the study were in proportion to the risks; the rights and welfare of the subjects were respected; the physicians conducting the study did not find the hazards to outweigh the potential benefits; the results reported are accurate; and each subject or subject's parent or legal guardian gave his or her written informed consent before any protocol-driven tests or evaluations were performed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 June 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 21
Worldwide total number of subjects	21
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	1
Adolescents (12-17 years)	1

Adults (18-64 years)	16
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This multicenter study was conducted at 4 sites in the US. The number of subjects treated at each site ranged from 2 to 9.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	IgPro20
-----------	---------

Arm description:

A liquid formulation of normal human IgG at a concentration of 20%. IgPro20 was administered as a subcutaneous infusion weekly or twice weekly, depending on the investigator's judgment and the subject's preference.

Arm type	Experimental
Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	Human Normal Immunoglobulin for Subcutaneous Administration (IGSC), Hizentra, IgG with Proline
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The IgPro20 dose is the same as in the previous pivotal study ZLB04_009CR (EudraCT Number: 2014-003607-30, NCT00419341) infused subcutaneously weekly or twice a week (in the latter case, half of a weekly dose will be used)

Number of subjects in period 1	IgPro20
Started	21
Completed	16
Not completed	5
Consent withdrawn by subject	3
Adverse event, non-fatal	1
Lost to follow-up	1

Baseline characteristics

Reporting groups

Reporting group title	IgPro20
-----------------------	---------

Reporting group description:

A liquid formulation of normal human IgG at a concentration of 20%. IgPro20 was administered as a subcutaneous infusion weekly or twice weekly, depending on the investigator's judgment and the subject's preference.

Reporting group values	IgPro20	Total	
Number of subjects	21	21	
Age categorical			
Units: Subjects			
>=2 to <12 years	1	1	
>=12 to < 16 years	1	1	
>=16 to < 65 years	16	16	
>=65 years	3	3	
Age continuous			
Units: years			
arithmetic mean	42.4		
standard deviation	± 18.53	-

End points

End points reporting groups

Reporting group title	IgPro20
-----------------------	---------

Reporting group description:

A liquid formulation of normal human IgG at a concentration of 20%. IgPro20 was administered as a subcutaneous infusion weekly or twice weekly, depending on the investigator's judgment and the subject's preference.

Subject analysis set title	IgPro20 - ITT
----------------------------	---------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The Intention-to-Treat (ITT) population comprised all subjects treated with study medication during any study period.

Subject analysis set title	IgPro20 - PPE
----------------------------	---------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

The Per-Protocol Efficacy (PPE) population comprised all subjects who completed at least 48 weeks of the efficacy period that started with the first IgPro20 dose in this study.

Subject analysis set title	IgPro20 - AT
----------------------------	--------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

The all-treated (AT) safety population comprised all subjects treated with the study medication during any study period.

Primary: Annualized Rate of Serious Bacterial Infection (Intention-to-Treat Population)

End point title	Annualized Rate of Serious Bacterial Infection (Intention-to-Treat Population) ^[1]
-----------------	---

End point description:

The annualized rate was based on the total number of infections and the total number of subject study days for all subjects in the specified analysis population and adjusted to 365 days.

Acute serious bacterial infections included pneumonia, bacteremia/septicemia, osteomyelitis/septic arthritis, bacterial meningitis, and visceral abscess.

End point type	Primary
----------------	---------

End point timeframe:

For the duration of the study, up to approximately 104 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: End point data analysis consisted of the estimation of the annualized rate and 99% upper confidence interval limit as per protocol; no statistical hypothesis was planned or conducted (in accordance with the US Food and Drug Administration Guidance for Industry on "Safety, efficacy, and pharmacokinetic studies to support marketing of immune globulin intravenous (human) as replacement therapy for primary humoral immunodeficiency" [June 2008]).

End point values	IgPro20 - ITT			
Subject group type	Subject analysis set			
Number of subjects analysed	21 ^[2]			
Units: infections per subject year				
number (not applicable)	0.06			

Notes:

[2] - Subject study days analyzed: 11950

Statistical analyses

No statistical analyses for this end point

Secondary: Annualized Rate of Serious Bacterial Infection (Per-Protocol Efficacy Population)

End point title	Annualized Rate of Serious Bacterial Infection (Per-Protocol Efficacy Population)
-----------------	---

End point description:

The annualized rate was based on the total number of infections and the total number of subject study days for all subjects in the specified analysis population and adjusted to 365 days.

Acute serious bacterial infections included pneumonia, bacteremia/septicemia, osteomyelitis/septic arthritis, bacterial meningitis, and visceral abscess.

End point type	Secondary

occurrences (all)	24		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 June 2008	Additional safety endpoints were specified, including the total number of temporally associated AEs (i.e., AEs that began during infusion or within 24 or 72 hours after infusion) and the number of temporally associated AEs per infusion. The projected number of sites was changed from approximately 10 to approximately 5 and the projected number of subjects was changed from approximately 30 to approximately 20. The transition procedures from the preceding study ZLB04_009CR to this extension study were updated. Additional evaluation procedures in case of hemolytic and/or hepatotoxic events were specified (determination of baseline serum haptoglobin and urine hemosiderin values). This amendment was implemented after 3 subjects had received their first infusion of study medication.
16 October 2008	The trough level ratio (TLR) that was developed in response to a regulatory authority's suggestion for checking adequate dosing was introduced, together with rules for dose adjustments that were to be implemented if the TLR differed from the stipulated range ($1.29 \pm 15\%$ times the latest historic IGIV Ctrough). Furthermore, a specific procedure for reporting AEs associated with infections was introduced (2 new CRF pages for reporting infections and potential SBIs). Additional details on evaluation procedures in case of hemolytic and/or hepatotoxic events were provided (repeat tests for abnormal laboratory results). This amendment was implemented after all subjects had received their first infusion of study medication.
09 September 2009	The rules for IgPro20 dose adjustments that were to be considered if the TLR differed from the stipulated range were updated. Storage and transport temperature requirements for the study medication were updated. This amendment was implemented after all subjects had received their first infusion of study medication.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
