Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 January 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objectives of this study were to evaluate the efficacy of guselkumab in subjects with active psoriatic arthritis (PsA) by assessing the reduction in signs and symptoms of PsA and to assess the safety and tolerability of guselkumab in subjects with active PsA.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki that are consistent with Good Clinical Practices and applicable regulatory requirements. The study protocol and amendment were reviewed by an Independent Ethics Committee (IEC) and Institutional Review Board (IRB). Subjects or their legally acceptable representatives provided their written consent to participate in the study after having been informed about the nature and purpose of the study, participation/termination conditions, and risks and benefits of treatment. Safety was evaluated throughout the study and included adverse events (AEs), including injection-site and allergic reactions, clinical laboratory tests, vital signs, physical examinations, concomitant medication review and early detection of active tuberculosis (TB). An independent data monitoring committee was commissioned for this study to review unblinded data at regularly scheduled intervals.

Background therapy:

Stable dose of methotrexate [less than or equal to (\leq) 25 milligram per week (mg/week)], oral corticosteroids [\leq 10 milligram (mg) of prednisone/day or equivalent], or nonsteroidal anti-inflammatory drugs (NSAIDs) or other analgesics were permitted but not required.

Evidence for comparator: -

Actual start date of recruitment	27 March 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	Poland: 25
Country: Number of subjects enrolled	Romania: 5
Country: Number of subjects enrolled	Russian Federation: 89
Country: Number of subjects enrolled	United States: 11
Worldwide total number of subjects	149
EEA total number of subjects	43

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	136
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

251 were screened; 149 were randomized into placebo (n=49) and guselkumab (n=100) treatment groups. Eligible Subjects had PsA for at least 6 months who met CIASSification criteria for Psoriatic Arthritis (CASPAR) criteria, ≥ 3 swollen and 3 tender joints, with C-reactive protein (CRP) level of ≥ 0.3 mg/dL, and $\geq 3\%$ body surface area of psoriasis.

Period 1

Period 1 title	W0 - W16: placebo-controlled
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects were randomized to receive subcutaneous (SC) injection of placebo for guselkumab at Weeks (W) 0, 4, 12, and 20, and guselkumab 100 mg at Weeks 24, 28, 36, and 44. Subjects who met the early escape (EE) criterion at week 16 switched to open-label therapy with ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the psoriatic arthritis (PsA) indication.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received matching placebo at Weeks 0, 4, 12, and 20.

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	CNT01275
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Early escaped subjects received ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the PsA indication.

Investigational medicinal product name	Guselkumab
Investigational medicinal product code	CNT01959
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects in the placebo group crossed over and received 100 mg guselkumab at Weeks 24, 28, 36, and 44.

Arm title	Guselkumab
------------------	------------

Arm description:

Subjects were randomized to receive SC injection of guselkumab 100 milligram (mg) at Weeks 0, 4, 12,

20, 28, 36, and 44, and placebo at Week 24. Subjects who met the EE criterion at week 16 switched to open-label therapy with ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the PsA indication.

Arm type	Experimental
Investigational medicinal product name	Guselkumab
Investigational medicinal product code	CNT01959
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 100 mg guselkumab at Weeks 0, 4, 12, 20, 28, 36, and 44.

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	CNT01275
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Early escaped subjects received ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the PsA indication.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received matching placebo at Weeks 24 for maintaining the blind.

Number of subjects in period 1	Placebo	Guselkumab
Started	49	100
Subjects Early escaped (EE) at Week 16	17 ^[1]	10 ^[2]
Completed	48	99
Not completed	1	1
unspecified	-	1
Lack of efficacy	1	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 17 subjects who early escaped from placebo to ustekinumab at Week 16 were considered as completers at Week 16.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 10 subjects who early escaped from guselkumab to ustekinumab at Week 16 were considered as completers at Week 16.

Period 2

Period 2 title	W16 - W24: placebo-controlled
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects were randomized to receive SC injection of placebo at Weeks 0, 4, 12, and 20, and guselkumab 100 mg at Weeks 24, 28, 36, and 44. Subjects who met the EE criterion at week 16 switched to open-label therapy with ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the PsA indication.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received matching placebo at Weeks 0, 4, 12, and 20.

Dosage and administration details:

Subjects received matching placebo at Weeks 24 for maintaining the blind.

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	CNT01275
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Early escaped subjects received ustekinumab 45 mg or 90 mg at Weeks 16, 20, 32, and 44 based on the approved dosage for the PsA indication.

Number of subjects in period 2^[3]	Placebo	Guselkumab
Started	31	89
Subjects EE to Ustekinumab at W16	17 ^[4]	10 ^[5]
Cross-over to/continue Guselkumab at W24	29	86
Completed	29	86
Not completed	2	3
Consent withdrawn by subject	-	2
Lost to follow-up	1	-
Lack of efficacy	1	1

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects who early escaped at Week 16 were included in the completers in the preceding period but were not included in the number of subjects starting this period.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 17 subjects who early escaped from placebo to ustekinumab at Week 16 were counted in the previous period, but not in this period.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 10 subjects who early escaped from guselkumab to ustekinumab at Week 16 were counted in the previous period, but not counted in this period.

Period 3

Period 3 title	W24 - W56: Active Treatment & Follow-up
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Primary: Percentage of Subjects who Achieved an American College of Rheumatology (ACR) 20 Response at Week 24

End point title	Percentage of Subjects who Achieved an American College of Rheumatology (ACR) 20 Response at Week 24
End point description: ACR 20 response is defined as $\geq 20\%$ improvement in TJC(68 joints) and SJC(66 joints) and in 3 of following 5 assessments: Subject's assessment of pain (VAS) 0-100mm scale, 0=no pain to 100=worst possible pain),Subject's global assessment of disease activity (VAS)(scale ranges from 0= Excellent to 100= poor), Physician's global assessment of disease activity (VAS) (scale ranges from 0=no arthritis activity to 100=extremely active arthritis),Subject's assessment of physical function as measured by HAQ-DI (scale ranges from 0= no difficulty to 3= inability to do task in that area), Serum CRP. Full analysis set (FAS) for efficacy endpoints through Week 24 include all randomized subjects who received at least 1 dose of study drug and analyzed based on their assigned treatment regardless of their actual treatment received. Subjects set to non-responders if they met treatment failure (TF), early escape (EE) criteria at week 16 or had data missing.

-----------------	---

End point description:

A PASI 75 response is defined as $\geq 75\%$ improvement in PASI score from baseline. The PASI is a system used for assessing and grading the severity of psoriatic lesions and their response to therapy. The PASI produces a numeric score that can range from 0 [best] - 72 [worst]. The combination of redness, scaling, and thickness, as well as overall body involvement determine the PASI score. PASI response through Week 24 is based on the imputed PASI values with last observation carry forward (LOCF) for EE and missing data. Subjects with missing baseline were excluded from the analysis. Here, 'N' number of participants analysed are those who were evaluable for this endpoint.

End point title	Change from Baseline in the Disability Index of the Health Assessment Questionnaire (HAQ-DI) Score at Week 24
-----------------	---

End point description:

The HAQ-DI score is an evaluation of the functional status for a subject. The 20- question instrument assesses the degree of difficulty a person has in accomplishing tasks in 8 functional areas (dressing, arising, eating, walking, hygiene, reaching, gripping, and activities of daily living). Responses in each functional area were scored from 0, indicating no difficulty, to 3, indicating inability to perform a task in that area. Overall score was computed as the sum of domain scores and divided by the number of domains answered. Total possible score range: 0-3 where 0 = least difficulty and 3 = extreme difficulty. Based on the imputed HAQ-DI scores using last observation carry forward for EE and missing data.

Secondary: Percentage of Subjects who Achieved an ACR 50 Response at Week 24

End point title	Percentage of Subjects who Achieved an ACR 50 Response at Week 24
-----------------	---

End point description:

ACR 20 response is defined as $\geq 20\%$ improvement in TJC(68 joints) and SJC(66 joints) and in 3 of following 5 assessments: Subject's assessment of pain (VAS) 0-100mm scale, 0=no pain to 100=worst possible pain), Subject's global assessment of disease activity (VAS)(scale ranges from 0= Excellent to 100= poor), Physician's global assessment of disease activity (VAS)(scale ranges from 0=no arthritis activity to 100=extremely active arthritis), Subject's assessment of physical function as measured by HAQ-DI (scale ranges from 0-no difficulty to 3-inability to perform a task in that area), and Serum C-reactive protein (CRP). Subjects were set to non-responders if they met TF, EE criteria prior to week 16 or had data missing.

End point title	Percent (%) Change from Baseline in Enthesitis Scores at Week 24 Among Subjects with Enthesitis at Baseline
-----------------	---

End point description:

Enthesitis were assessed using the Leeds Enthesitis Index (LEI). The LEI was developed to assess enthesitis in participants with PsA, and evaluates the presence (score of 1) or absence of pain (score of 0) by applying local pressure to Lateral elbow epicondyle, left and right, Medial femoral condyle, left and right, and Achilles tendon insertion, left and right. LEI scores ranging from 0 (0 sites with tenderness) to 6 (worst possible score; 6 sites with tenderness). LOCF method was used to impute missing values. Last Observation at or prior EE was used to replace the data after EE for subjects who met EE criteria. Here, N 'number of subjects analysed' signifies that those subjects who had enthesitis at baseline and were evaluable for this endpoint.

The 20- question instrument assesses the degree of difficulty a person has in accomplishing tasks in 8 functional areas (dressing, arising, eating, walking, hygiene, reaching, gripping, and activities of daily living). Responses in each functional area were scored from 0, indicating no difficulty, to 3, indicating inability to perform a task in that area. Overall score was computed as the sum of domain scores and divided by the number of domains answered. Total possible score range: 0-3 where 0 = least difficulty and 3 = extreme difficulty. HAQ-DI response is defined as at least 0.30 improvement from baseline in HAQ-DI score and is based on observed values in the post week 24 efficacy analysis set. Here, N 'number of subjects analyzed' signifies that these subjects were evaluable for this endpoint and 'n' signifies the number of subjects analyzed at specific timepoints.

End point type	Secondary
End point timeframe:	
Week 24, 28, 32, 36, 44 and 56	

Notes:

[30] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The placebo arm at baseline is not applicable for the endpoints post Week 24, as all remaining placebo subjects crossed over to receive guselkumab at Week 24. Therefore the reporting group is renamed as "Crossover (placebo to Guselkumab)".

End point values	Crossover (Placebo to Guselkumab)	Guselkumab

Secondary: Change from Baseline in mCPDAI Score at Week 24 and Week 44

End point title	Change from Baseline in mCPDAI Score at Week 24 and Week 44 ^[65]
-----------------	---

End point description:

The mCPDAI assesses 4 domains (joints, skin, entheses, and dactylitis) and calculated using the following assessments: joints (66 swollen and 68 tender joint counts), HAQ score, PASI, dactylitis, and enthesitis. Within each domain a score (range 0 [not involved in specific condition] to 3 (severe condition)) is assigned. Higher score range indicates severe condition. Based on observed values in the Post Week 24 Efficacy Analysis Set. Here 'n' signifies the number of subjects analyzed at specific timepoints.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 24 and 44

Notes:

[65] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The placebo arm at baseline is not applicable for the endpoints post Week 24, as all remaining placebo subjects crossed over to receive guselkumab at Week 24. Therefore the reporting group is renamed as "Crossover (placebo to Guselkumab)".

End point values	Crossover (Placebo to Guselkumab)	Guselkumab

The PASI is a system used for assessing and grading severity of psoriatic lesions and their response to therapy. The PASI produces a numeric score that can range from 0 (no disease) to 72 (maximal disease). A PASI 50, 75, 90 and 100 responses is defined as \geq 50, 75, 90 and 100 percent (%) improvement respectively in PASI score from baseline. LOCF method was used for missing PASI values and the last observation at or prior EE was used to replace the data after EE for subjects who met EE criteria. Subjects with missing baseline PASI were excluded in the analysis. here 'n' signifies the number of subjects analyzed at specific timepoints.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to Week 56

Adverse event reporting additional description:

Safety analysis set includes all subjects randomized at Week 0 who received at least (partial or complete) dose of study agent administration and were analyzed according to the actual treatment received (at the time of onset of AE event) after randomization, regardless of treatments they were randomized to.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Week (W) 0 to 24: Placebo
-----------------------	---------------------------

Reporting group description:

Include subjects who were randomized in the placebo group and received at least one injection of placebo. AEs that occurred between Week 0 and Week 24 while subjects were on placebo were included in this group. For subjects who early escaped to ustekinumab at Week 16, AEs that occurred after early escape were excluded.

Reporting group title	W0 to 24: Guselkumab
-----------------------	----------------------

Reporting group description:

Include subjects who were randomized in the guselkumab group and received at least one injection of guselkumab. AEs that occurred between Week 0 and Week 24 while subjects were on guselkumab were included in this group. For subjects who early escaped to ustekinumab at Week 16, AEs that occurred after early escape were excluded.

Reporting group title	W24 to 44: Crossover (Placebo to Guselkumab)
-----------------------	--

Reporting group description:

Include subjects who remained in the placebo group and crossed over to guselkumab 100 mg at Week 24. AEs that occurred between Week 24 and Week 44 while subjects were on guselkumab were included in this group.

Reporting group title	W24 to 44: Guselkumab
-----------------------	-----------------------

Reporting group description:

Include subjects who were randomized in the guselkumab group and received at least one injection of guselkumab. AEs that occurred between Week 24 and Week 44 while subjects were on guselkumab were included in this group. For subjects who early escaped to ustekinumab at Week 16, AEs that occurred after early escape were excluded.

Reporting group title	W44 to 56: Crossover (Placebo to Guselkumab)
-----------------------	--

Reporting group description:

Include subjects who remained in the placebo group and crossed over to guselkumab 100 mg at Week 24. AEs that occurred during the follow-up period (12 weeks from the last study agent administration) were included in this group.

Reporting group title	W44 to 56: Guselkumab
-----------------------	-----------------------

Reporting group description:

Include subjects who were randomized in the guselkumab group and received at least one injection of guselkumab. AEs that occurred during the follow-up period (12 weeks from the last study agent administration) were included in this group. For subjects who early escaped to ustekinumab at Week 16, AEs that occurred after early escape were excluded.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 February 2015	The overall reasons for the amendment is to provide additional treatment options for subjects with ongoing disease activity after Week 24, to collect Ribonucleic acid (RNA) and stool samples to evaluate the mechanism of action of guselkumab, and to add additional results from the CNTO1275ARA2001 study to support the CNTO1959PSA2001 study design.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study results were limited by small sample size, relatively short duration of follow-up to detect rare AEs.
Lack of an active comparator limited comparison with other PsA therapies.

Notes:
