

## Clinical trial results:

### **IMPRESS-AF: IMproved exercise tolerance in patients with PReserved Ejection fraction by Spironolactone on myocardial fibrosiS in Atrial Fibrillation**

#### **Summary**

EudraCT number	2014-003702-33
Trial protocol	GB
Global end of trial date	27 September 2019

#### **Results information**

Result version number	v1 (current)
This version publication date	05 March 2021
First version publication date	05 March 2021

#### **Trial information**

##### **Trial identification**

Sponsor protocol code	RG_14-150
-----------------------	-----------

##### **Additional study identifiers**

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

##### **Sponsors**

Notes:

##### **Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 September 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 September 2019
Global end of trial reached?	Yes
Global end of trial date	27 September 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The IMPRESS-AF trial addressed whether two years of treatment with spironolactone as compared to placebo improves exercise tolerance, quality of life and diastolic function in patients with permanent AF and preserved left ventricular ejection fraction (LVEF).

Protection of trial subjects:

\*The trial will be managed by the Primary Care Clinical Trials Unit (PCCRTU), an NIHR accredited CTU that is experienced in the management of clinical trials. The unit has developed the infrastructure, processes and systems to eliminate potential risks and burdens wherever possible and manage where this is not the case.

\* Spironolactone is a widely used drug and has a large evidence base for the effective treatment in heart failure. Side effects and safety data are therefore well established.

\* Cardiopulmonary exercise test and 6minute walk test: there is a small risk of complications, such as myocardial infarction, left ventricular rupture, ventricular fibrillation or ventricular tachycardia. The study involves low risk patients. Any participant presenting with factors associated with higher risk of complications (eg, symptomatic coronary disease, recent acute coronary events, severe valvular disease, impaired left ventricular systolic function) will be excluded from the study. Protocol specific training will be given to the personnel who will be performing the tests and taking the bloods. The tests will be done on a hospital site and facilities and staff for emergency help will be available at all times.

\* Blood tests may cause minimal discomfort and bruising at the site of the needle going through the skin. All blood sampling will be done by experienced clinical research fellow.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 250
Worldwide total number of subjects	250
EEA total number of subjects	250

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	41
From 65 to 84 years	199
85 years and over	10

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Patients  $\geq 50$  years old, no spironolactone treatment with permanent AF according to ESC criteria as a cardiac arrhythmia with surface ECG 'absolutely' irregular RR intervals, no distinct P waves on surface ECG, atrial cycle length usually variable and  $<300$  bpm, duration of the AF  $>12$  months & no plans for pharmacological/electrical cardioversion

### Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	spironolactone
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	spironolactone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

single 25 milligram tablet taken orally once per day (typically to be taken during the morning, but can be taken regularly at other time of day if preferable) for a 24 month period

<b>Arm title</b>	placebo
Arm description: -	
Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

a single 25 milligram tablet taken orally once per day (typically to be taken during the morning, but can be taken regularly at other time of day if preferable) for a 24 month period

<b>Number of subjects in period 1</b>	spironolactone	placebo
Started	125	125
Completed	125	125

## Period 2

Period 2 title	12 month time point
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer, Assessor

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	spironolactone
Arm description: -	
Arm type	Experimental

standard deviation	± 4.6	± 5.1	-
BMI			
2 patients data missing (reporting group 2)			
Units: kg/m2			
arithmetic mean	30.4	30.5	
standard deviation	± 5.2	± 5.6	-
Alcohol use			
Units: Units per week			
arithmetic mean	7.2	8.8	
standard deviation	± 9.9	± 10.8	-
6 minute walk test			
Units: meters			
arithmetic mean	256.7	270.4	
standard deviation	± 83.4	± 89.5	-
Resting heart rate			
Units: bpm			
arithmetic mean	87.3	86.7	
standard deviation	± 19.4	± 18.7	-
Peak heart rate during CPET			
Units: bpm			
arithmetic mean	128.4	129.9	
standard deviation	± 26.1	± 25.4	-
BNP			
One patient data not recorded (Reporting group 2)			
Units: pg/ml			
arithmetic mean	163.5	183.3	
standard deviation	± 125.4	± 168.5	-
Systolic blood pressure			
One patient data not recorded (Reporting group 2)			
Units: mmHg			
arithmetic mean	129.2	130.1	
standard deviation	± 15.5	± 15.0	-
Diastolic blood pressure			
One patient data not recorded (Reporting group 2)			
Units: mmHg			
arithmetic mean	75.7	75.6	
standard deviation	± 10.9	± 13.9	-
Waist circumference			
Two patients data not recorded (Reporting group 2)			
Units: cm			
arithmetic mean	99.5	100.3	

standard deviation	± 12.5	± 14.4	-
Hip circumference			
Two patients data not recorded (Hip circumference) reporting group 2			
Units: cm			
arithmetic mean	107.4	108.0	
standard deviation	± 10.0	± 13.2	-
Left ventricular ejection fraction			
Units: percent			
arithmetic mean	60.4	60.5	
standard deviation	± 5.4	± 5.7	-
Mitral valve measurement			
Units: E/E' ratio			
arithmetic mean	10.7	10.6	
standard deviation	± 4.4	± 4.2	-
EQ-5D-5L			
9 patient's data not recorded (4 reporting group 1, 5 reporting group 2)			
Units: Score			
arithmetic mean	0.81	0.83	
standard deviation	± 0.19	± 0.16	-
ML WHF			
To score MLWHF (Minnesota Living with Heart Failure) questionnaire, it was allowed that at most 20% of 21 responses missing which was equivalent to 4 data items. If there were less than or equal to 4 data items missing then we used mean substitution to impute the missing responses and then scored the questionnaire by summing the responses to all 21 questions; otherwise, the persons score was left missing.			
12 patients data was not recorded (8 reporting arm 1, 4 reporting arm 2)			
Units: Score			
arithmetic mean	22.9	21.9	
standard deviation	± 20.4	± 22.9	-

### Primary: peak VO2 on cardiopulmonary exercise testing (Primary analysis adjusted for stratification variable)

End point title	peak VO2 on cardiopulmonary exercise testing (Primary analysis adjusted for stratification variable)
End point description: The primary analysis followed intention to treat principles including participants regardless of their compliance with the medication. Participants with missing data for the final assessment were excluded except for those who died before the 24 month follow-up assessment. For these participants, their peak VO2 scores at 24 months were imputed as zero values regardless of cause. Whilst the value of 0 was not actually measured, it allowed inclusion of the patient in the study and it should be a suitable reflection of the health state of the patient. The imputation rules were defined prior to any data analysis and reported in the Statistical Analysis Plan. A value of 0 was assigned to peak VO2 score for those who died before the 24 month follow-up assessment	
End point type	Primary

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 March 2015	Change in blood tests Change in drug manufacturer. Removal of GP checklist. Addition of rebooking tests. Clarification of randomisation and blinding.
01 May 2015	Inclusion in the trial is no longer conditional on the patient having normal BNP levels (<100pg/mL). Clarification of personnel designated as CI and PI. Trial Management Group to meet regularly rather than weekly (section 14.3). Amendment of section 6.3 (Blinding) to clarify that individual sealed code break envelopes will be used, rather than a master list. Change of trial statistician due to retirement of original person. Pharmacy to audit drug storage facility annually, rather than six monthly, in line with internal NHS policy (section 7.1.4). Non-responders to invitation from Primary Care to be sent a reminder letter (Section 4.1 and 8.1). Minor corrections to grammar and spelling.
12 October 2015	A mechanistic sub-analysis of impact of biomarkers of fibrosis and haemostasis in the study population (Appendix 1) To include a timeline for visit windows. The Ability to understand questionnaires being removed as an inclusion criteria and added as an exclusion criteria.(section 4.1)
10 March 2016	IMP dispensing schedule amended to reflect that Drug will be dispensed at different clinic visits for a small number of patients. GP invitation letter amended to reflect that The University of Birmingham will keep the information provided on reply slips on a secure database until they are no longer needed, and they will then be destroyed. Telephone pre-screening added to the protocol. Participants that have expressed an interest will be prescreened by telephone and asked the medical questions outlined in section 3.1. Minor corrections to grammar and spelling.
05 January 2017	Threshold for withdrawal due to hyperkalaemia increased to $K^+ > 6.0$ mmol/L, up from $> 5.5$ mmol/L. Reduced follow-up focussed on trial outcomes permitted for patients that have withdrawn from trial treatment only. Increased flexibility for dispensing of trial medication to ensure continuous supply. Changes to reflect merger of trials units at University of Birmingham. Clarifications to required trial assessments, time window frame permitted for follow up visits at month 6, 12 and 18 changed and to monitoring of concomitant medications. Minor corrections and clarifications.
13 April 2017	Section 6.3: Additional spare bottles of trial medication will be ordered as required as part of the scheduled order has been added. Section 7.2: to ensure consistency of wording throughout the protocol nonlife threatening side effects such as gynaecomastia has been changed to "significant" gynaecomastia. IMP re-up-titration clarification added: "the patient is likely to maintain potassium levels $\leq 5.0$ mmol/L after returning to a full dose" Section 8.4: Participant incentive detailed in the protocol in line with approved PIS v5 dated 30th March 2015. Section 8.5: Definitions of Patient discontinuation in the trial have been added. Section 8.6: The process of informing patients of their treatment allocation after data analysis has been completed stipulated. Section 9: Reference Safety Information (RSI) is specified as undesirable effects of Summary of Medicinal Product Characteristics (SmPC) for spironolactone 25mg (updated 13/04/2016). Assessment of all Adverse Events changed from CI & PI to PI & medically qualified delegate. PI signature page added. Data manager name added.

Notes:

---

## **Interruptions (globally)**

Were there any global interruptions to the trial? No

## **Limitations and caveats**

None reported
