Analysis stage	Final	
Date of interim/final analysis	24 February 2017	
Is this the analysis of the primary completion data?	No	
Global end of trial reached?	Yes	
Global end of trial date	24 February 2017	
Was the trial ended prematurely?	No	

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the effect of MEDI0382 on glucose control (as measured by the standardized mixed-meal test [MMT] glucose data) and body weight from baseline to the end of a 4-week period at a stable dose.

Protection of trial subjects:

The conduct of this clinical study met all local and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and were consistent with International Conference on Harmonization guideline: Good Clinical Practice, and applicable regulatory requirements. Subjects signed an informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Subject disposition

Recruit ment

Recruitment details:

The study was conducted from 09 Dec 2015 to 24 Feb 2017 in Germany.

Pre-assignment

Screening details:

A total of 422 subjects were screened, of which 113 subjects were randomized in the study. One subject was randomized but not treated with study drug.

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Ar ms

Are arms mutually exclusive?	Yes
Armtitle	Placebo

Arm description:

Subjects received placebo (matched to either 100 micrograms [mcg], or 150 mcg or 200 mcg or 300 mcg of MEDI0382) subcutaneously (SC) once daily from Day 1 to Day 7 (Cohort 1); or Day 1 to Day 11 (Cohort 2); or Day 1 to Day 15 (Cohort 3); or Day 1 to Day 41 (Cohort 4); or Day 1 to Day 22 (Cohort 5); or Day 1 to Day 17 (Cohort 6).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Sterile solution
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matched to either 100 mcg, or 150 mcg or 200 mcg or 300 mcg of MEDI0382 was administered subcutaneously (SC) once daily from Day 1 to Day 7 (Cohort 1); or Day 1 to Day 11 (Cohort 2); or Day 1 to Day 15 (Cohort 3); or Day 1 to Day 41 (Cohort 4); or Day 1 to Day 22 (Cohort 5); or Day 1 to Day 17 (Cohort 6).

Armtitle	Cohort 1: MEDI0382 100 mcg

Arm description:

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Total subjects enrolled worldwide were 113; of which 1 subject was randomized but not treated. This 1 subject was not included in As-treated population and data for the subject was not captured for baseline characteristics.

Pri mary: Percent Change From Baseline in Mixed-meal Test (MM Under the Concentration-time Curve From Time Oto 4 hours to t (EOT) (Cohort 4)

End point title	Percent Change From Baseline in Mixed-meal Test (MMT)
	Glucose Area Under the Concentration-time Curve From Time 0
	to 4 hours to the End of Treatment (EOT) (Cohort 4) ^[1]

End point description:

Mixed-meal test involved consumption of a standardized meal (nutritional supplement containing the components of fat, carbohydrate and protein, which make up a standard MMT) within 5 minutes, and timed serial blood samples were obtained for measurement of glucose and parameters related to glucose metabolism just before and 4 hours (hrs) after consumption of the standardized meal (with no additional food intake during this time). Pharmacodynamic (PD) population was analysed for this end point, which included all subjects who received at least 1 dose of study drug and had at least 1 post-MMT PD blood sample.

End point type	Primary

End point timeframe:

0 minutes before; and 15, 30, 45, 60, 90, 120, 180, and 240 minutes post standardized meal intake (SMI) on Baseline (Day -1) and EOT (Day 41)

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Statistical analysis was not applicable since there were no inferential statistics, only descriptive statistics were performed for this end point.

End point title	Number of Subjects With Treatment-Emergent Adverse Events
	(TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs) ^[11]

End point description:

An Adverse Event (AE) is any unfavourable and unintended sign, symptoms, or diseases temporally associated with use of study drug, whether or not considered related to study drug. Serious adverse events (SAE) is any AE that resulted in death, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, life-threatening, a congenital anomaly/birth defect, or an important medical event. TEAEs and TESAEs are defined as AEs and SAEs present at baseline that worsened in intensity after administration of study drug, or events absent at baseline that emerged after administration of study drug, up to 28 days after the last study dose of each

cohort (approximately 60 days). As-treated Population (ATP) was analysed for this end point, which included all subjects who received any study drug and analysed according to the treatment they actually received.

End point title	Number of Subjects With Any Suicidal Ideation as Assessed by
	Columbia-Suicide Severity Rating Scale (C-SSRS) Score
	(Cohorts 4, 5, and 6) ^[15]

End point description:

The C-SSRS is an interview-based rating scale to systematically assess suicidal ideation and suicidal behaviour of subjects. Yes/No responses are mapped to C-SSRS to assess whether subject experienced suicidal behaviour and suicidal ideation. Suicidal behaviour questions includes preparatory acts or behaviour, aborted attempt, interrupted attempt, actual attempt, and completed suicide. Suicidal ideation questions includes wish to be dead, non-specific active suicidal thoughts, active suicidal ideation with any methods (not plan) without intent to act, active suicidal ideation with some intent to act (without specific plan), and active suicidal ideation with specific plan and intent. Subjects with yes response to any category for suicidal ideation were reported. As-treated population was used for analysis. Here, 'n' denotes number of subjects analysed for specified time points. Arbitrary value '99999' signifies data not applicable as no subject was evaluable for specified time point.

Secondary: Terminal Elimination Half Life (t 1/2) of MEDI 0382

End point title	Terminal Elimination Half Life (t1/2) of MEDI0382 (Cohorts 1,
	2, and 3) ^[17]

End point description:

Terminal elimination half Life is the time measured for the plasma concentration of MEDI0382 to decrease by one half. Pharmacokinetic (PK) population was analysed for this end point, which included all subjects who received at least 1 dose of study drug and had at least one PK sample taken that was above the lower limit of quantitation. Here, 'n' denotes number of subjects analysed for specified time points. Arbitrary value '99999' signifies data not applicable as no subject was analysed for the specified time points. 95% confidence interval (CI) data was not applicable as only one subject was evaluable; therefore, lower and upper CI values are presented with arbitrary values of '0.999999' and '99.9999', respectively for the specified time points.

End point type	Secondary

Mixes-meal test involved consumption of a standardized meal (nutritional supplement containing the components of fat, carbohydrate and protein, which make up a standard MMT) within 5 minutes, and timed serial blood samples were obtained for measurement of glucose and parameters related to glucose metabolism just before and 4 hrs after consumption of the standardized meal (with no additional food intake during this time). Incretins included glucagon-like peptide-1 (GLP-1; active and inactive both), glucagon, and gastric inhibitory peptide (GIP). PD population was analysed for this end point. Here, 'n' denotes number of subjects analysed for specified parameters. Arbitrary value '999999' signifies standard deviation not applicable as only one subject was evaluable for the specified parameter.

End point type	Secondary
. ,.	

End point timeframe:

0 minutes before; and 15, 30, 45, 60, 90, 120, 180, and 240 minutes post SMI on Baseline (Day -1) and EOT (Day 7 for Cohort 1; Day 11 for Cohort 2; Day 15 for Cohort 3; Day 41 for Cohort 4)

Notes

[28] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Statistical analysis was not applicable since there were no inferential statistics, only descriptive statistics were performed for this end point.

Reporting groups

Reporting group title	Cohort 1: MEDI0382 100 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily from Day 1 to Day 7.

Reporting group title Cohort 1: Placebo

Reporting group description:

Subjects received placebo matched to (MEDI0382 100 mcg) SC once daily from Day 1 to Day 7.

Reporting group title Cohort 2: Placebo

Reporting group description:

Subjects received placebo (matched to MEDI0382 100 mcg) SC once daily for at least 4 days (Day 1 to Day 4) and thereafter, an up titrated dose of placebo (matched to MEDI0382 150 mcg) SC once daily for 7 days (Day 5 to Day 11).

Reporting group title Cohort 3: Placebo

Reporting group description:

Participants received placebo (matched to MEDI0382 100 mcg) SC once daily for at least 4 days (Day 1 to Day 4); thereafter, an up titrated dose of placebo (matched to MEDI0382 150 mcg) SC once daily for 4 days (Day 5 to Day 8); followed by second up titrated dose of placebo (matched to MEDI0382 200 mcg) SC once daily for 7 days (Day 9 to Day 15).

Reporting group title Cohort 2: MEDI0382 150 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily for at least 4 days (Day 1 to Day 4) and thereafter, an up titrated dose of MEDI0382 150 mcg SC once daily for 7 days (Day 5 to Day 11).

Reporting group title Cohort 3: MEDI0382 200 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily for at least 4 days (Day 1 to Day 4); thereafter, an up titrated dose of MEDI0382 150 mcg SC once daily for 4 days (Day 5 to Day 8); followed by second up titrated dose of MEDI0382 200 mcg SC once daily for 7 days (Day 9 to Day 15).

Reporting group title Cohort 4: Placebo

Reporting group description:

Subjects received placebo (matched to MEDI0382 100 mcg) SC once daily for at least 4 days (Day 1 to Day 4); thereafter, an up titrated dose of placebo (matched to MEDI0382 150 mcg) SC once daily for 4 days (Day 5 to Day 8); followed by second up titrated dose of placebo (matched to MEDI0382 200 mcg) SC once daily for 4 days (Day 9 to Day 12), then a further placebo (matched to MEDI0382 200 mcg) SC once daily for 28 days (Day 13 to Day 40) at home-dosing; followed by placebo (matched to MEDI0382 200 mcg) SC once daily for 1 day in hospital (Day 41).

Reporting group title Cohort 4: MEDI0382 200 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily for at least 4 days (Day 1 to Day 4); thereafter, an up titrated dose of MEDI0382 150 mcg SC once daily for 4 days (Day 5 to Day 8); followed by second up titrated dose of MEDI0382 200 mcg SC once daily for 4 days (Day 9 to Day 12), then a further MEDI0382 200 mcg SC once daily for 28 days (Day 13 to Day 40) at home-dosing; followed by MEDI0382 200 mcg SC once daily for 1 day in hospital (Day 41).

Reporting group title Cohort 5: Placebo

Reporting group description:

Subjects received placebo (matched to MEDI0382 100 mcg) SC once daily for at least 5 days (Day 1 to

Day 5); thereafter, an up titrated dose of placebo (matched to MEDI0382 150 mcg) SC once daily for 5 days (Day 6 to Day 10); then a second up titrated dose of placebo (matched to MEDI0382 200 mcg) SC once daily for 5 days (Day 11 to Day 15); followed by third up titrated dose of placebo (matched to MEDI0382 300 mcg) SC once daily for 7 days (Day 16 to Day 22).

Reporting group title Cohort 5: MEDI0382 300 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily for at least 5 days (Day 1 to Day 5); thereafter, an up titrated dose of MEDI0382 150 mcg SC once daily for 5 days (Day 6 to Day 10); then a second up titrated dose of MEDI0382 200 mcg SC once daily for 5 days (Day 11 to Day 15); followed by third up titrated dose of MEDI0382 300 mcg SC once daily for 7 days (Day 16 to Day 22).

Reporting group title Cohort 6: Placebo

Reporting group description:

Subjects received placebo (matched to MEDI0382 100 mcg) SC once daily for at least 5 days (Day 1 to Day 5); thereafter, an up titrated dose of placebo (matched to MEDI0382 200 mcg) SC once daily for 5 days (Day 6 to Day 10); followed by a second up titrated dose of placebo (matched to MEDI0382 300 mcg) SC once daily for 7 days (Day 11 to Day 17).

Reporting group title Cohort 6: MEDI0382 300 mcg

Reporting group description:

Subjects received MEDI0382 100 mcg SC once daily for at least 5 days (Day 1 to Day 5); thereafter, an up titrated dose of MEDI0382 200 mcg SC once daily for 5 days (Day 6 to Day 10); followed by a second up titrated dose of MEDI0382 300 mcg SC once daily for 7 days (Day 11 to Day 17).

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Dat e	A me n d me n t
26 February 2015	Number of anticipated study sites was changed from approximately 3 to 5 to "up to 8" (Section 9.1) • Data for progression from single-ascending dose (SAD) study to Cohort 1 of this multiple-ascending dose (MAD) study were updated (Section 9.4.3.1) • Provision that relevant data for progression from SAD study to the MAD study will be summarized and provided to appropriate regulatory body and central ethics committee was added. Additionally, approval to proceed with MAD study will be obtained from the appropriate regulatory body prior to initiating enrollment was added (Section 9.4.3.1) • Text were added for subject safety (Section 9.4.3.1) • The following text was added for clarification: the decision for progression from Cohort 1 to Cohort 2, and from Cohort 2 to Cohort 3 will be made by Dose Escalation Committee (DEC); relevant data will be summarized and provided to appropriate regulatory body and central ethics committee. And, approval to proceed with Cohort 4 will be obtained from the appropriate regulatory body prior to initiating enrollment (Section 9.4.3.1) • DEC recommendations were updated (Section 9.4.3.1) • Significant vomiting was clarified as "3 or more episodes of vomiting on a single day or across 2 consecutive days, despite adjustment to diet having been made" (Section 9.4.5) • Starting dose reported for SAD study was updated from 30 µg/day to 5 µg/day. Dose rationale was updated. A new table was added (Section 9.2) • A note was added to clarify Inclusion Criterion 9 (about contraception) (Section 9.3.1) • The exclusion criterion "Concurrent participation in another study of any kind is prohibited" was added (Section 9.3.2) • Text was modified to add that an individual subject will not receive any further study drug if that subject has more than 2 symptomatic hypoglycemic events; or persistent hyperglycemia, Section 9.3.3).
14 August 2015	Updated and modified text to include a summary of the safety information and statement regarding the current status from the SAD study (D5670C00001) • Changed text to specify change from baseline in glucose and body weight was to be evaluated (Sections 8 and 9.5.1.1) • Objective 1/endpoint 1 were changed to specify change from baseline to be used to evaluate glucose control, blood sample collection parameters at Day 1 were rationalized (Sections 8 and 9.5.1.1) • Clarified that subjects should be treated with a daily dose of statin at baseline. Amended text to include measurement of metformin concentration (Sections 9.5.1.1 and 9.7.1.4) • Analysis of non-esterified fatty acids and beta-hydroxybutyrate were added to the lipid endpoints (Sections 9.5.1.1 and 9.7.1.5) • Number of anticipated clinical sites was increased from 8 to 10. In addition, the inclusion of overweight as well as obese subjects was reflected due to the increased range for body weight eligibility (Section 9.1) • Amended text to clarify that subjects were admitted to the clinic 2 evenings before the receipt of study drug • The Day 1 assessment of MMT and blood samples for glucose metabolism panel were removed from the protocol (Section 9.5.1.2) • Data form SAD study wad added (Section 9.2) • Amended the dose escalation stopping decision and cardiac stopping criteria (Section 9.4.3.1) • Inclusion, exclusion and removal of subjects from therapy or assessment sections were amended (Section 9.3.1, Section 9.3.2, Section 9.3.3) • Schedule of screening procedures (GFR, glucose) and a predose blood sample (Section 9.5.1.2) • Identity of study drug text was modified (Section 9.4.2) • Dose preparation steps were modified • Process of SAE reporting by the Sponsor and the implementation of electronic SAE reporting were modified • Appendix 6 was added • References were updated • Appendix 2 was revised.

10 October 2015

Text was amended to reflect a reduction in the maximum dose that was to administered in this study from 400 to 300 $\mu g/day$ (Section 9.4.3.1) • Amended text to provide the predicted safety margins for the 300 $\mu g/day$ dose (Section 9.2) • An exclusion criterion excluding subjects with a history of lactic acidosis or ketoacidosis was added (Section 9.3.2) • Text was amended to include collection of finger prick glucose samples 15 minutes prior to and 2 hours after breakfast and before going to bed in addition to the measures taken before and after the mid-day and evening meals to increase glucose monitoring (Section 9.5.1.2) • The footnotes describing the timing of ECG capture were corrected to be consistent with the measurements indicated in the tables (Section 9.5.1.2) • The volume of injection was reduced consistent with the reduction in dose from 400 to 300 μg • The needle gauge was amended from 27G to 29G.

18 March 2016

Texts were modified to be consistent with the updated results from SAD study (Section 9.2) • Inclusion criteria related to statin therapy was removed (Sections 9.3.1 and 9.4.7.1) • Exploratory objectives/endpoints and their assessment methods were added (Sections 8.3, 9.5.1.1, 9.5.1.2, 9.7.1.3, and 9.7.1.5) • Study design was changed related to telemetry and return home for subjects in Cohorts 3 and 4 (Sections 9.1 and 9.5.1.2) • Screening window was changed from 42 days to 60 days • Requirement that regulatory approval be obtained "prior to initiating enrollment" in order to proceed with Cohort 4 was changed to "prior to initiating dosing" • Age range for inclusion criteria, upper and lower range of screening HbA1c, and inclusion criterion for HbA1c were changed (Section 9.1 and 9.3.1) • Exclusion criteria for fasting blood glucose was removed; upper range of abnormal systolic and diastolic BP was increased and text was added to note for vital signs criteria and exclusion criteria concerning QRS duration; exclusion criteria regarding subject's use of weight loss diets/agents, and conditions where MRI is contraindicated were added for Cohort 4 only if site has access to an MRI (Section 9.3.2) • Exclusion criterion of "history of cancer, with exception of non-melanoma skin cancer" was changed to "history of cancer within the last 10 years, with the exception of non-melanoma skin cancer (Section 9.3.2).

27 April 2016

The text was changed from "up to 10 study sites" to "approximately 10 study sites" (Section 9.1) • The study design was reverted to state that subjects will be admitted to and remain in the unit for all doses and all dose levels during the uptitration period. Relevant text was modified to reflect the reversion in study design (Section 9.5.1.2) • The age range for inclusion in the study was changed from 18 through <= 69 years to 18 through <= 65 years and relevant text was modified to reflect this change (Sections 9.1 and 9.3.1) • The upper range of screening HbA1c was changed from 9.0% to 8.5% (Sections 9.1 and 9.3.1) • The exclusion criterion of "fasting blood glucose >= 200 mg/dL (11.11 mmol/L)" was reinstated (Section 9.3.2) • The upper range of abnormal systolic BP was decreased by 10 mm Hg for both age groups (< 60 years old, >= 60 years old), and the upper range of abnormal diastolic BP was decreased by 10 mm Hg (Section 9.3.2).

21 July 2016

Exploratory endpoint 7 was updated (Sections 9.5.1.1) Text was changed from "approximately 10 study sites" to "approximately 12 study sites"; "48 subjects" to "approximately 48 subjects" (Section 9.1) Text was revised to clarify maximum dose in the study (Section 9.1); widen window of pre-dose MRI scan (Table 9.5.1.2-4); criteria of MRI scan (Table 9.5.1.1-1 and Table 9.5.1.2-4); clarification for post dose MRI scan (Table 9.5.1.1-1 and Table 9.5.1.2-4); subjects may be rescreened more than once; subjects will wear the accelerometer on the nondominant wrist continuously for approximately 7 days (Section 9.5.1.3); diluent is not required for Cohort 4 and that a 0.3 mL insulin syringe will be utilized during the in clinic and at-home treatment periods summary of SAD Study D5670C00001 was revised and Cohort 1-3 safety data from this MAD study was included Exclusion criteria 35 was revised Serum chemistries panel note, daily diary training, dose preparation steps were updated.

25 August 2016

Text was reverted to specify that subjects may be rescreened only once (Section 9.4.3) • Text was reverted to state that additional subjects may be screened and available to ensure that a sufficient number of subjects are randomized into each cohort (Section 9.4.3).

23 September 2016

Text was added/updated to: include Part C of the study and to describe the details of Cohorts 5 and 6 (Sections 9.1, 9.2, and 9.4.1, and Figure 9.1-1); provide rationale for using the 300 µg dose in Part C; add study endpoints related to the addition of Part C, including Cohorts 5 and 6, to the study (Section 9.5.1.1); describe the inpatient periods and clinic visits for Cohorts 5 and 6; concerning the timing of the MMT procedures for Cohorts 5 and 6; to make clear that, for Cohorts 4, 5, and 6, the last PK sample was collected 24 hours after the last dose; provide details of the sample size calculation resulting in 32 subjects in total in Cohorts 5 and 6 (Section 9.7.2); specify 24-hour ABPM was applicable to Cohorts 5 and 6, in addition to Cohort 4 (Section 9.3.2); add Cohorts 5 and 6 to the measuring of body weight during the outpatient periods, and at the 28-day End of Study Visit; describe the sentinel dosing approach for Cohorts 5 and 6 (Section 9.4.3.1); modify description of hypertension; clarify randomization ratio for Cohorts 5 and 6; include 5-day up-titration periods for Cohorts 5 and 6; • 300 µg results were added to the table, and human PK parameters were updated (Section 9.2 and Table 9.2-1) • Number of subjects was increased from 75 to 107 (Sections 9.1 and 9.2) • 'Cohort 4' was removed from description of analysis of efficacy endpoints • Updated the inclusion and exclusion criteria; and safety criteria related to the addition of Part C, including Cohorts 5 and 6, to the study • Modified the C SSRS assessment Cohort 4 table (Table 9.5.1.2-4) and 24-hour ABPM assessment • Procedures for Cohorts 5 and 6, were added (Table 9.5.1.2-6 and Table 9.5.1.2-7).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Li mi tations and caveats

None reported
