

Clinical trial results:

A Phase III, Randomized, Open-Label, Multi Center, Safety and Efficacy Study to Evaluate Nab Paclitaxel (Abraxane®) as Maintenance Treatment after Induction with Nab-Paclitaxel plus Carboplatin in Subjects with Squamous Cell Non-Small Cell Lung Cancer (NSLSC)

Summary

EudraCT number	2014-003804-66
Trial protocol	DE ES GB IT
Global end of trial date	01 August 2019

Results information

Result version number	v1 (current)
This version publication date	16 August 2020
First version publication date	16 August 2020

Trial information

Trial identification

Sponsor protocol code	ABI-007-NSCL-003
-----------------------	------------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02027428
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 August 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 August 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate progression free survival (PFS) with nab-paclitaxel as maintenance treatment after response or stable disease (SD) with nab-paclitaxel plus carboplatin in subjects with squamous cell NSCLC.

Protection of trial subjects:

Patient Confidentiality, Informed Consent, Archival of Essential Documents

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 February 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	18 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 46
Country: Number of subjects enrolled	Italy: 29
Country: Number of subjects enrolled	Spain: 40
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 310
Worldwide total number of subjects	427
EEA total number of subjects	117

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	162
From 65 to 84 years	262
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 87 sites in Germany, Italy, Spain, the United Kingdom and the United States.

Pre-assignment

Screening details:

Participants with a response or stable disease during Induction were randomized 2:1 into investigative treatment (nab-paclitaxel plus best supportive care [BSC] or BSC only) stratified by disease stage, response during induction and Eastern Cooperative Oncology Group (ECOG) performance status.

Period 1

Period 1 title	Baseline Period: Induction
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	All Participants - Induction
-----------	------------------------------

Arm description:

During induction, participants received nab-paclitaxel plus carboplatin as standard of care: nab-paclitaxel 100 mg/m² by intravenous (IV) infusion over 30 minutes on Days 1, 8, and 15 of each 21-day cycle and carboplatin AUC = 6 mg*min/mL by IV infusion on Day 1 of each 21-day cycle. If the participant had radiological or clinical progressive disease (PD), they were discontinued from the study and not followed. If the participant had a complete response (CR), partial response (PR), or stable disease (SD) without PD at the end of 4 cycles, he/she were eligible to be randomised to the maintenance phase.

Arm type	Experimental
Investigational medicinal product name	nab-Paclitaxel
Investigational medicinal product code	
Other name	Abraxane
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

nab-Paclitaxel 100 mg/m² by intravenous (IV) infusion over 30 minutes on Days 1, 8, and 15 of each 21-day cycle

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	Paraplatin,
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carboplatin AUC = 6 mg*min/mL IV on Day 1 of each 21-day cycle

Number of subjects in period 1	All Participants - Induction
Started	427
Received Study Drug	420
Completed	202
Not completed	225
Adverse event, serious fatal	21
Consent withdrawn by subject	22
Adverse event, non-fatal	51
Symptomatic deterioration	16
Progressive Disease	77
Miscellaneous	14
Study terminated by sponsor	12
Induction - Ongoing	4
Never treated	7
Protocol deviation	1

Period 2

Period 2 title	Maintenance
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Nab-Paclitaxel + Best Supportive Care (BSC)

Arm description:

Maintenance Phase: Subjects were administered nab-paclitaxel 100 mg/m² by IV infusion over 30 minutes on Days 1 and 8 of each 21-day cycle, plus best supportive care (BSC) until disease progression.

Arm type	Experimental
Investigational medicinal product name	nab-paclitaxel
Investigational medicinal product code	
Other name	Abraxane
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

nab-paclitaxel 100 mg/m² by intravenous (IV) infusion over 30 minutes on Days 1, 8, and 15 of each 21-day cycle

Arm title	Best Supportive Care (BSC)
------------------	----------------------------

Arm description:

Participants were administered best supportive care (only) until disease progression.

Arm type	Palliative Care
No investigational medicinal product assigned in this arm	

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: The study was not designed for the induction period to be the baseline period. The maintenance period is considered as the baseline period.

Number of subjects in period 2 ^[2]	Nab-Paclitaxel + Best Supportive Care (BSC)	Best Supportive Care (BSC)
Started	136	66
Completed	12	6
Not completed	124	60
Adverse event, serious fatal	3	2
Consent withdrawn by subject	6	5
AE	21	1
Symptomatic deterioration	4	1
Not specified	6	3
Progressive Disease	84	-
Lack of efficacy	-	47
Protocol deviation	-	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The maintenance period is considered the baseline period of the trial as the primary objective was to evaluate PFS with nab-paclitaxel as maintenance treatment after response or stable disease with nab-paclitaxel in the induction period.

Baseline characteristics

Reporting groups

Reporting group title	Nab-Paclitaxel + Best Supportive Care (BSC)
Reporting group description:	
Maintenance Phase: Subjects were administered nab-paclitaxel 100 mg/m ² by IV infusion over 30 minutes on Days 1 and 8 of each 21-day cycle, plus best supportive care (BSC) until disease progression.	
Reporting group title	Best Supportive Care (BSC)
Reporting group description:	
Participants were administered best supportive care (only) until disease progression.	

Reporting group values	Nab-Paclitaxel + Best Supportive Care (BSC)	Best Supportive Care (BSC)	Total
Number of subjects	136	66	202
Age Categorical			
Induction includes participants who were enrolled and treated in the induction phase. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units: participants			
<65 years	48	27	75
≥65 years	88	39	127
Age Continuous			
Continuous age values in Total column represent the 202 participants in the Maintenance Period. Induction includes participants who were enrolled and treated however, baseline characteristics for non-randomized participants is not displayed. The total number represents the ITT population in the maintenance phase.			
Units: years			
arithmetic mean	67.1	66.8	
standard deviation	± 9.02	± 8.06	-
Sex: Female, Male			
Induction includes participants who were enrolled and treated in the induction phase. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units:			
Female	49	23	72
Male	87	43	130
Ethnicity (NIH/OMB)			
Induction includes participants who were enrolled and treated in the induction phase. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
Hispanic or Latino	3	5	8
Not Hispanic or Latino	132	61	193
Missing	1	0	1
Race/Ethnicity, Customized			
Induction includes participants who were enrolled and treated in the induction phase. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
American Indian or Alaska Native	1	0	1
Asian	1	0	1
Black or African American	9	2	11

White	125	62	187
Other	0	2	2
Overall Tumor Response at End of Induction			
Tumor response to Induction part chemotherapy for stratification is the response assessed at the last computed tomography (CT) scan before randomization. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
Complete response	1	2	3
Partial response	92	42	134
Stable disease	41	21	62
Progressive disease	2	0	2
Not evaluable	0	1	1
Confirmed Histology			
The histology categories included those with a tumor histology of squamous versus non-squamous types. Baseline characteristics for non-randomized participants is not displayed. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
Squamous cell carcinoma	136	66	202
Squamous cell carcinoma not confirmed	0	0	0
Disease Stage at Enrollment			
Disease stage = how big the tumor is and how far it has spread. Disease stages range from 0 (not spread) to IV (spread throughout the body). Stage 0: the cancer has not spread beyond the inner lining of the lung. Stage I: the cancer is small and hasn't spread to the lymph nodes (LN). Stage II: the cancer has spread to some LN near the original tumor. Stage III: the cancer has spread to nearby tissue or spread to far away LN. Stage IV: the cancer has spread to other organs such as lung, brain, or liver. BLC are displayed for participants randomized in the maintenance phase.			
Units: Subjects			
Stage IIIB	18	8	26
Stage IV	118	58	176

Subject analysis sets

Subject analysis set title	Nab-Paclitaxel + BSC: Induction + Maintenance
Subject analysis set type	Intention-to-treat
Subject analysis set description:	
Participants randomized to this treatment arm for Maintenance, inclusive of their experience during Induction. During induction, participants received nab-paclitaxel plus carboplatin as standard of care: nab-paclitaxel 100 mg/m ² IV infusion over 30 minutes on Days 1, 8, and 15 of each 21-day cycle and carboplatin AUC = 6 mg*min/mL IV on Day 1 of each 21-day cycle. If the participant had a complete response, partial response, or stable disease without PD at the end of 4 cycles, he/she continued to the maintenance phase. Maintenance: Following randomization, participants in this treatment arm were administered nab-paclitaxel 100 mg/m ² by IV infusion over 30 minutes on Days 1 and 8 of each 21-day cycle, plus best supportive care until disease progression.	
Subject analysis set title	BSC: Induction + Maintenance

White			
Other			
Overall Tumor Response at End of Induction			
Tumor response to Induction part chemotherapy for stratification is the response assessed at the last computed tomography (CT) scan before randomization. Baseline characteristics are displayed only for participants randomized in the maintenance phase. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
Complete response			
Partial response			
Stable disease			
Progressive disease			
Not evaluable			
Confirmed Histology			
The histology categories included those with a tumor histology of squamous versus non-squamous types. Baseline characteristics for non-randomized participants is not displayed. The total number represents the ITT population in the maintenance phase.			
Units: Subjects			
Squamous cell carcinoma			
Squamous cell carcinoma not confirmed			
Disease Stage at Enrollment			
Disease stage = how big the tumor is and how far it has spread. Disease stages range from 0 (not spread) to IV (spread throughout the body). Stage 0: the cancer has not spread beyond the inner lining of the lung. Stage I: the cancer is small and hasn't spread to the lymph nodes (LN). Stage II: the cancer has spread to some LN near the original tumor. Stage III: the cancer has spread to nearby tissue or spread to far away LN. Stage IV: the cancer has spread to other organs such as lung, brain, or liver. BLC are displayed for participants randomized in the maintenance phase.			
Units: Subjects

Primary: Kaplan-Meier Estimate of Progression-Free Survival (PFS) from Randomization into Maintenance

End point title	Kaplan-Meier Estimate of Progression-Free Survival (PFS) from Randomization into Maintenance
-----------------	--

End point description:

PFS is defined as the time in months from the date of randomization to the date of disease progression based on the investigator's assessment according to Response Evaluation Criteria in Solid Tumors (RECIST) Version 1.1 criteria (documented by computerized tomography, not including symptomatic deterioration) or death (any cause) on or prior to 01 Aug 2019. RECIST 1.1 definition: Complete response (CR) disappearance of all target lesions; Partial response (PR) at least a 30% decrease in the sum of diameters of target lesions from baseline; Stable disease (SD) neither sufficient shrinkage to qualify for partial response nor sufficient increase of lesions to qualify for progressive disease (PD); PD = At least a 20% increase in the sum of diameters of target lesions from nadir, and/or the appearance of new lesions. The intent to treat population (ITT) in the maintenance part = all randomized subjects regardless of whether they received study drug or had any efficacy exams collected.

End point type	Primary
----------------	---------

End point timeframe:

From the date of randomization to the date of disease progression or death of any cause; up to August 2019; up to 42 months

Secondary: Kaplan-Meier Estimate for Duration of Response Over the Entire Study

End point title	Kaplan-Meier Estimate for Duration of Response Over the Entire Study
-----------------	--

End point description:

Duration of overall response was measured from the time criteria were first met for CR/PR until the first date the recurrent or progressive disease (PD) was radiologically documented. Participants who did not have PD after the response were censored on the date of last tumor assessment. If a participant died before PD, the participant was censored on the date of death. The ITT population of participants randomized to the maintenance period and had a confirmed partial or complete response.

End point type	Secondary
----------------	-----------

End point timeframe:

Between Day 1 of the Induction Part through to the date of disease progression or death; up to 01 August 2019; maximum treatment duration was 234.1 weeks for entire study.

End point values	Nab-Paclitaxel + BSC: Induction + Maintenance	BSC: Induction + Maintenance		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	94	38		
Units: months				
median (confidence interval 95%)	5.95 (4.60 to 7.06)	4.60 (3.68 to 5.49)		

Statistical analyses

Statistical analysis title	Statistical Analysis 1
----------------------------	------------------------

Statistical analysis description:

Hazard ratio was based on stratified Cox proportional hazards regression model. The following stratification factors were evaluated in the sparse strata elimination algorithm: stage of disease (IIIB or IV) at diagnosis, ECOG performance status (0 or 1) at the end of Induction, and tumor response (CR/PR or SD) at the end of Induction.

Comparison groups	Nab-Paclitaxel + BSC: Induction + Maintenance v BSC: Induction + Maintenance
-------------------	--

Number of subjects included in analysis	132
Analysis specification	Pre-specified
Analysis type	superiority
Parameter estimate	Hazard ratio (HR)
Point estimate	0.93
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.59
upper limit	1.47

Secondary: Participants with Treatment-Emergent Adverse Events (TEAEs) in the Induction Part

End point title	Participants with Treatment-Emergent Adverse Events (TEAEs) in the Induction Part
-----------------	---

End point description:

TEAE in the Induction part is defined as any adverse event (AE) with an onset on or after Day 1 of treatment for the Induction part, and on or before the day of randomization for subjects who entered into the Maintenance part, or, for subjects who did not enter into the Maintenance part, before the treatment discontinuation date plus 28 days or any serious AE which occurred thereafter but was determined to be related to any study drug by the investigator. The severity of AEs was graded based on National Cancer Institute Common Terminology Criteria for Adverse Events (CTCAE), Version 4.0 and the scale: Grade 1 = Mild, Grade 2 = Moderate Grade, 3 = Severe Grade, 4 = Life threatening, Grade 5 = Death. Relation to study drug was determined by the investigator. Safety population of participants treated during induction period.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 of Induction up Week 23 (maximum treatment in Induction plus 4 weeks if not continuing into Maintenance)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

1. Induction: Day 1 up to 23 weeks (maximum treatment in induction plus (+) 4 weeks if not continuing into maintenance) 2. Nab-Paclitaxel + Best Supportive Care Randomization into maintenance up to 154 weeks (maximum treatment in maintenance + 4 weeks)

Adverse event reporting additional description:

3. BSC: Randomization into Maintenance up to 120 weeks (maximum treatment in Maintenance + 4 weeks); TEAEs are reported up to the data cut off date of 01 August 2019.

All-Cause Mortality is reported for the ITT population (received at least 1 dose of study treatment regardless of whether any efficacy exams were collected) up to 01 August 2019.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
Dictionary version	V21.0

Reporting groups

Reporting group title	All Participants - Induction
-----------------------	------------------------------

Reporting group description:

During induction, participants received nab-paclitaxel plus carboplatin as standard of care: nab-paclitaxel 100 mg/m² IV infusion over 30 minutes on Days 1, 8, and 15 of each 21-day cycle and carboplatin AUC = 6 mg*min/mL IV on Day 1 of each 21-day cycle. If the participant had radiological or clinical progressive disease (PD), they were discontinued from the study and not followed. If the participant had a complete response, partial response, or stable disease without PD at the end of 4 cycles, he/she were eligible to be randomised to the maintenance phase.

Reporting group title	Nab-Paclitaxel + Best Supportive Care (Maintenance)
-----------------------	---

Reporting group description:

Maintenance Phase: Following randomization, participants in this treatment arm were administered nab-paclitaxel 100 mg/m² by IV infusion over 30 minutes on Days 1 and 8 of each 21-day cycle, plus best supportive care until disease progression.

Reporting group title	Best Supportive Care (Maintenance)
-----------------------	------------------------------------

Reporting group description:

Maintenance Phase: Following randomization, participants in this treatment arm were administered best supportive care (only) until disease progression.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 October 2014	1. Incorporated the recommendation received from the US FDA to remove the cross-over part of the trial 2. Enabled potential participation of centers outside of the US.
07 May 2015	1. Incorporated the intention to produce and review summaries of the QoL and biomarker data (Induction part only, pre-randomization) while the study was ongoing. 2. Clarified the secondary objectives (DCR over entire study was added) and the definitions of the analysis populations for the Induction and Maintenance parts.
18 April 2016	1. Addendum A clarified protocol details following requests from the United Kingdom regulatory health authority. Addendum A was implemented only in the United Kingdom. 2. Added text regarding true abstinence and periodic abstinence for Inclusion Criterion 17. 3. Added text to Table of Events regarding investigator discussion of possible side effects, peripheral neuropathy assessment, and AE evaluation. 4. Added text to concomitant medications and procedures regarding concurrent carboplatin therapy with nephrotoxic drugs, ototoxic drugs, and warfarin. Added text regarding concomitant administration of paclitaxel with medications known to inhibit or induce either Cytochrome P450 (CYP) 2C8 or CYP3A4. 5. Added text regarding events considered sufficient reasons for discontinuing a subject from IP.
13 March 2017	1. Incorporated changes to the study sample size (reduction of subject population and targeted number of PFS events).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
