#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 August 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 August 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate that farletuzumab has superior efficacy compared with placebo in improving Progression-free survival (PFS), as determined by Response Evaluation Criteria In Solid Tumors (RECIST) 1.1, when added to the standard chemotherapy regimens of carboplatin plus paclitaxel or carboplatin plus PLD, in subjects with platinum-sensitive ovarian cancer in first relapse who have a cancer antigen 125 (CA125) greater than or equal to ( $\geq$ ) 3 x upper limit of normal (ULN) (105 units per milliliter [U/mL]) at study entry.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2013) - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use - Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312 - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states. - Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 March 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 21
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Italy: 35
Country: Number of subjects enrolled	Japan: 22
Country: Number of subjects enrolled	Spain: 33
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 92
Worldwide total number of subjects	214
EEA total number of subjects	96

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	117
From 65 to 84 years	95
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details:

Subjects took part in the study at 60 investigative sites in the United states, Belgium, Germany, Italy, Spain, United Kingdom and Japan from 19 March 2015 to 13 August 2020.

### Pre-assignment

Screening details:

A total of 332 subjects were screened, of which 118 were screen failures and 214 were randomized out of which 211 were treated.

### Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Farletuzumab 5 mg/kg+Carboplatin/Paclitaxel or Carboplatin/PLD

Arm description:

Subjects received either carboplatin (area under the concentration-time curve [AUC] 5) plus paclitaxel 175 milligrams per square meter (mg/m<sup>2</sup>) intravenously (IV) every 3 weeks or carboplatin (AUC 5) plus PLD 30 mg/m<sup>2</sup> IV every 4 weeks in combination with farletuzumab loading dose of 10 milligram per kilogram (mg/kg) for the first 2 weeks, followed by 5 mg/kg every week thereafter administered up to maximum of 8 cycles at the investigator's discretion. Subjects who completed combination treatment phase and subjects who experienced intolerable toxicity to chemotherapy in combination treatment phase continued to receive maintenance treatment with farletuzumab 5 mg/kg every week alone up to maximum of 64 cycles or until disease progression was confirmed by radiographic assessment, or subject discontinued treatment for any other reason.

Arm type	Experimental
Investigational medicinal product name	Farletuzumab
Investigational medicinal product code	
Other name	MORAb-003
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Farletuzumab loading dose of 10 mg/kg for the first 2 weeks, followed by 5 mg/kg every week thereafter administered up to maximum of 64 cycles or disease progression.

<b>Arm title</b>	Placebo + Carboplatin/Paclitaxel or Carboplatin/PLD
------------------	---

Arm description:

Subjects received either carboplatin (AUC 5) plus paclitaxel 175 mg/m<sup>2</sup> IV every 3 weeks or carboplatin (AUC 5) plus PLD 30 mg/m<sup>2</sup> IV every 4 weeks in combination with placebo loading dose of 10 mg/kg for the first 2 weeks, followed by 5 mg/kg every week thereafter administered up to maximum of 8 cycles at the investigator's discretion. Subjects who completed combination treatment phase and subjects who experienced intolerable toxicity to chemotherapy in combination treatment phase continued to receive maintenance treatment with placebo 5 mg/kg every week alone up to maximum of 64 cycles or until disease progression was confirmed by radiographic assessment, or subject discontinued treatment for any other reason.

Arm type	Placebo

### Primary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS) <sup>[1]</sup>
End point description:	
PFS was defined as the time (in months) from the date of randomization of a subject to the date of first observation of progression or date of death, whatever the cause. PFS was assessed based on the investigators' assessments utilizing Response Evaluation Criteria In Solid Tumors (RECIST) 1.1. Disease progression (PD) was defined as at least a 20 percent (%) increase or 5 millimeter (mm) increase in the sum of diameters of target lesions (taking as reference the smallest sum on study) recorded since the treatment started or the appearance of 1 or more new lesions. PFS was estimated and analyzed using Kaplan-Meier method. The intent to treat (ITT) Population (Full Analysis Set) included all randomized subjects according to the assigned treatment by interactive response technology (IRT) system.	
End point type	Primary
End point timeframe:	
From the date of randomization to the date of first documentation of PD, or date of death, whichever occurs first up to approximately 5 years 5 months	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: Only descriptive data was planned to be analyzed for this endpoint.	

End point values	Farletuzumab 5 mg/kg+Carboplatin/Paclitaxel or Carboplatin/PLD	Placebo + Carboplatin/Paclitaxel or Carboplatin/PLD

### Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
-----------------	-----------------------

End point description:

OS was defined as the time from the date of randomization until the date of death. Subjects were censored at the date of last known to be alive. OS was analyzed using Kaplan-Meier method. The ITT Population (Full Analysis Set) included all randomized subjects according to the assigned treatment by IRT system. Here '99999' means that the upper limit of 95% confidence interval (CI) was not estimable due to insufficient number of events.

End point type	Secondary
----------------	-----------

### Secondary: Number of Subjects With Best Overall Response (BOR)

End point title	Number of Subjects With Best Overall Response (BOR)
-----------------	---

End point description:

BOR was defined as the best response of complete response (CR) or partial response (PR) or stable disease (SD) for  $\geq 6$  months recorded from the start of the treatment until PD or death, whichever occurred first based on investigator assessment per RECIST v1.1. CR: disappearance of all target and non-target lesions. All pathological (whether target or non-target) must have a reduction in their short axis  $< 10$  mm. PR: at least a 30% decrease in the sum of diameter (SOD) of target lesions, taking as reference the baseline sum diameters. SD: neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD, taking as reference the smallest SOD. PD was defined as at least 20% increase (including an absolute increase of at least 5 mm) in the SOD of target lesions, taking as reference the smallest sum and/or unequivocal progression of existing non-target lesions and/or appearance of 1 or more new lesions. Tumor Response Evaluable Analysis Set was used.

End point type	Secondary
End point timeframe:	
From first dose of study drug (Baseline) up to approximately 5 years 5 months

### Secondary: Percentage of Subjects Achieving Each Second Platinum-Free Interval Stratified by First Platinum-Free Interval

End point title	Percentage of Subjects Achieving Each Second Platinum-Free Interval Stratified by First Platinum-Free Interval
-----------------	--

End point description:

Percentage of Subjects achieving each second platinum-free interval (SPFI) (<6 months, 6-12 months, greater than [>] 12-36 months, and >36 months) stratified by first platinum-free interval (FPFI) (6 to 12 months and >12 to 36 months) was reported. First platinum-free interval was defined as the date of

completion of previous platinum-based chemotherapy until the date of first relapse (that is, first observation of progression). The date of first relapse was the progression date. Second platinum-free interval was defined as the date of completion of platinum-based chemotherapy (last dosing date) during the study until the date of progression or death (or censoring, if applicable). The ITT Population (Full Analysis Set) included all randomized subjects according to the assigned treatment by IRT system.

End point type	Secondary
----------------	-----------

End point timeframe:

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 February 2015	The protocol was amended to add method of randomization, updated Inclusion Criteria and exclusion criteria, clarified stopping rules for the study, added urine pregnancy testing (to be conducted locally), specified that the censoring and handling rules on missing values will be detailed in the statistical analysis plan, as well as potential sensitivity analyses with regard to missing values and updated quantities of blood to be drawn for bioanalytical sampling to more closely align with central laboratory blood sample handling practices, statement instructing sites to send images to central imaging laboratory for rapid reads in the case of suspected disease progression was removed and removal of reference to subject initials on the Investigational Product accountability log as only subject number will be captured.
18 December 2017	The protocol was amended to remove the 1:1 target stratification ratio and the associated minimum enrollment of 105 subjects per stratum and the description of the required number PFS events, sample size considerations were no longer based on the effect of farletuzumab on PFS in each of the 2 chemotherapy regimens, changed assumption for median PFS to 11 months in the control arm, changed assumption for median OS to 32 months, removed the description of the secondary efficacy analyses to be conducted in both strata, added that the primary and secondary analyses (PFS, OS, ORR, DR) in each strata were to be considered as exploratory analyses, revised inclusion and exclusion criteria and added that the alpha allocation between the interim and final OS analyses will be determined based on the Lan-DeMets spending function with O'Brien-Fleming boundary.
06 November 2018	The protocol was amended to replace "Morphotek" with "Eisai" to update study ownership.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
