

Clinical trial results:

Randomized phase III study: Supplemental parenteral nutrition for patients with locally advanced inoperable tumors of the head and neck, receiving definitive radiotherapy with Cetuximab or Cisplatin

Summary

EudraCT number	2014-003833-24
Trial protocol	AT
Global end of trial date	10 July 2019

Results information

Result version number	v2 (current)
This version publication date	25 July 2020
First version publication date	08 July 2020
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Description of arm A - control is updated.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 May 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 July 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Loss of body weight by more than 5% at the end of radiotherapy, compared with weight at the beginning of therapy, will be scored as an event of critical weight loss

Protection of trial subjects:

Safety assessments were scheduled weekly during treatment and 3 months after end of radiation. Dose modifications in case of toxicity were described in the protocol. Concomitant medications and therapies necessary for supportive care and safety of the patient were allowed. Only patients eligible for definitive curative radio-chemotherapy with Cisplatin or radio-immunotherapy with Cetuximab could have been included. The administration of concurrent other cancer therapy (chemotherapy, immunotherapy, antihormonal or biologic therapy) or concurrent treatment with an investigational drug was not permitted.

Women of childbearing potential must have a negative pregnancy test at screening and must use effective contraception.

Background therapy:

Standard of care (Immunotherapy with cetuximab; chemotherapy with cisplatin; radiation therapy)

Evidence for comparator: -

Actual start date of recruitment	20 April 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 8
Worldwide total number of subjects	8
EEA total number of subjects	8

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	5
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First patient in (FPI): 20-Apr-2017; Last patient in (LPI): 02-Jul-2018; Recruitment was prematurely withdrawn on 10-July-2019 due to low recruitment.

Assessed for eligibility: 21 patients

Eligible and randomized: 8 patients, randomized at 3 different sites in Austria.

Pre-assignment

Screening details:

21 patients with histologically confirmed local advanced squamous cell carcinoma of the larynx, hypopharynx, oropharynx or cavum oris and definitely planned radiotherapy in combination with cisplatin or cetuximab were screened for eligibility. Only 8 patients met inclusion criteria and were willing to participate.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A - control

Arm description:

Standard of care with or without parenteral nutrition

Arm type	No intervention
No investigational medicinal product assigned in this arm	
Arm title	Arm B - intervention group

Arm description:

Parenteral overnight nutrition with ZentroOLIMEL® 5.7% with electrolytes, vitamins (Cernevite®) and micronutrients (Addel Trace® or Nutryelt®) 15 ml/kg body weight/day (weight loss >5% from baseline, parenteral nutrition has to be increased up to 25 ml/kg body weight per day)

Arm type	Experimental
Investigational medicinal product name	ZentroOLIMEL®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Parenteral overnight nutrition with ZentroOLIMEL® 5.7% with electrolytes, vitamins (Cernevite®) and micronutrients (Addel Trace® or Nutryelt®) starting with 15 ml/kg body weight/day. In case of weight loss of more than 5%, dose of ZentroOLIMEL® has to be increased up to 25 ml/kg/body weight/day. During the RTX period of 7 weeks, with a total of 49 days of parenteral nutritional support.

Investigational medicinal product name	Cernevite®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Parenteral overnight nutrition with ZentroOLIMEL® 5.7% with electrolytes, vitamins (Cernevite®) and micronutrients (Addel Trace® or Nutryelt®) starting with 15 ml/kg body weight/day. In case of weight loss of more than 5%, dose of ZentroOLIMEL® has to be increased up to 25 ml/kg/body weight/day. During the RTX period of 7 weeks, with a total of 49 days of parenteral nutritional support.

Investigational medicinal product name	Nutryelt® or Addel Trace®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion

End points

End points reporting groups

Reporting group title	Arm A - control
Reporting group description:	
Standard of care with or without parenteral nutrition	
Reporting group title	Arm B - intervention group
Reporting group description:	
Parenteral overnight nutrition with ZentroOLIMEL® 5.7% with electrolytes, vitamins (Cernevit®) and micronutrients (Addel Trace® or Nutryelt®) 15 ml/kg body weight/day (weight loss >5% from baseline, parenteral nutrition has to be increased up to 25 ml/kg body weight per day)	

Primary: Critical weight loss (>5%)

End point title	Critical weight loss (>5%) ^[1]
End point description:	
Loss of body weight by more than 5% at the end of RTX, compared with weight at the beginning of therapy, is scored as an event of critical weight loss	
End point type	Primary
End point timeframe:	
Difference between baseline and week 8 (after end of radiotherapy)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses have been specified, as recruitment was prematurely withdrawn and to less patients were recruited to perform statistical analyses.

End point values	Arm A - control	Arm B - intervention group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	4	4		
Units: Subjects				
Critical weight loss	3	3		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All patients having received at least one dose of the study medication were followed for adverse events for at least 28 days after discontinuing study treatment or completion of study treatment.

Adverse event reporting additional description:

Progression of disease (including death due to the underlying malignant disease) is not to be regarded as SAE.

Due to the seriousness of the disease in this study, certain conditions defined as SAEs were excluded from expedited reporting on a SAE report Form, i.e.:

Elective hospitalization and surgery for treatment of disease.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 July 2018	Due to low recruitment, procedures and questionnaires were removed to simplify protocol procedures. Many patients refused participation due to long hospital stays during treatment within the study. To increase acceptance of treatment home-care systems are allowed to be used. To get early information about feasibility, tolerability and efficacy of treatment also in case of persisting low recruitment, interim analysis was established after randomization of 40 patients.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Statistical analyses according to protocol could not be performed as trial was stopped prematurely due to low recruitment on 10-Jul-2019.

Notes:
