Date of interim/final analysis	16 February 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 February 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a study comparing grazoprevir (MK-5172) plus elbasvir (MK-8742) treatment with sofosbuvir (SOF) plus Pegylated Interferon plus Ribavirin (RBV) [PR] treatment in treatment-naïve and prior PR treatment failure participants with chronic Hepatitis C Virus (HCV) genotype (GT)1, GT4, or GT6 infection. The primary objectives are to compare efficacy (assessed by the percentage of participants achieving sustained virologic response 12 weeks after ending study treatment [SVR12]) and safety between grazoprevir plus elbasvir and SOF plus PR treatment arms. The primary hypothesis is that the percentage of participants achieving SVR12 in the grazoprevir plus elbasvir arm is non-inferior to that in the SOF plus PR arm.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Country: Number of subjects enrolled	Lithuania: 38
Country: Number of subjects enrolled	Norway: 11
Country: Number of subjects enrolled	Poland: 45
Country: Number of subjects enrolled	Romania: 39
Country: Number of subjects enrolled	Spain: 21
Country: Number of subjects enrolled	Turkey: 20
Worldwide total number of subjects	257
EEA total number of subjects	237

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	239
From 65 to 84 years	18
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 257 participants were randomized to treatment: 129 to Grazoprevir + Elbasvir arm and 128 to Sofosbuvir plus Pegylated Interferon/Ribavirin (SOF + PR) arm. Two participants in the SOF + PR arm withdrew from study prior to treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Grazoprevir + Elbasvir

Arm description:

Participants receive a fixed-dose combination (FDC) tablet of 100 mg grazoprevir and 50 mg elbasvir for 12 weeks, followed by 24 weeks of follow-up.

Arm type	Experimental
Investigational medicinal product name	Grazoprevir + Elbasvir (100 mg/50 mg) Fixed Dose Combination (FDC)
Investigational medicinal product code	
Other name	MK-5172A
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

FDC (100 mg/50 mg) taken orally (PO) every day (QD) for 12 weeks.

Arm title	SOF + PR
------------------	----------

Arm description:

Participants receive SOF (400 mg) combined with PegIntron (1.5 mcg/kg) plus RBV (1000-1200 mg weight-based dose) for 12 weeks, followed by 24 weeks of follow-up.

Arm type	Experimental
Investigational medicinal product name	Sofosbuvir
Investigational medicinal product code	
Other name	Sovaldi
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400 mg tablets taken PO QD for 12 weeks.

Investigational medicinal product name	Pegylated interferon alfa-2b
Investigational medicinal product code	
Other name	PegIntron™
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

PegIntron™ administered as a subcutaneous (SC) injection every week (QW) at 1.5 µg/kg for 12 weeks.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	Rebetol™
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Capsule and/or tablet administered PO twice daily (BID) based on weight (1000 - 1200 mg) for 12 weeks.

Number of subjects in period 1	Grazoprevir + Elbasvir	SOF + PR

Reporting group title	SOF + PR
Reporting group description: Participants receive SOF (400 mg) combined with PegIntron (1.5 mcg/kg) plus RBV (1000-1200 mg weight-based dose) for 12 weeks, followed by 24 weeks of follow-up.	

Primary: Primary: Percentage of participants achieving Sustained Virologic Response at 12 Weeks after the end of all treatment (SVR12)

End point title	Primary: Percentage of participants achieving Sustained Virologic Response at 12 Weeks after the end of all treatment (SVR12)
End point description: Hepatitis C Virus ribonucleic acid (HCV-RNA) levels in plasma were measured using the Roche COBAS®AmpliPrep/COBAS® TaqMan® HCV Test, v2.0 on blood samples drawn from each participant. SVR12 was defined as HCV RNA below the lower limit of quantification (<LLOQ) at 12 weeks after the end of all study therapy. The primary efficacy hypothesis for this study was that the percentage of participants achieving SVR12 in the grazoprevir plus elbasvir arm was non-inferior to the percentage in the SOF plus PR arm. A secondary statistical analysis was performed to determine whether the percentage of participants achieving SVR12 in the grazoprevir plus elbasvir arm was superior to the percentage in the SOF plus PR arm.	
End point type	Primary
End point timeframe: 12 weeks after end of all therapy (Study Week 24)

Statistical analyses

Statistical analysis title	Non-Inferiority Efficacy Analyses: SVR12
Statistical analysis description: Primary Analysis Approach: Non-Inferiority Analyses of the percentage of participants achieving SVR12 was conducted using the Miettinen & Nurminen (M&N) method. The analysis was adjusted for genotype (1a vs. non-1a) and fibrosis stage (cirrhotic vs. non-cirrhotic). The adjusted differences (grazoprevir+elbasvir arm minus SOF+PR arm) in percentages along with the corresponding 95% confidence intervals (CIs) and p-values were provided.	
Comparison groups	Grazoprevir + Elbasvir v SOF + PR

Number of subjects included in analysis	255
Analysis specification	Pre-specified

Primary: Percentage of participants experiencing at least one adverse event (AE) during the treatment period plus first 14 follow-up days

End point title	Percentage of participants experiencing at least one adverse event (AE) during the treatment period plus first 14 follow-up days
-----------------	--

End point description:

An AE was defined as any untoward medical occurrence in a participant administered a pharmaceutical product and which did not necessarily have a causal relationship with this treatment. An AE could therefore be any unfavourable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a medicinal product or protocol-specified procedure, whether or not considered related to the medicinal product or protocol-specified procedure. Any worsening of a preexisting condition that was temporally associated with the use of the Sponsor's product, was also an AE. The percentage of participants who experienced at least one AE was reported for each treatment arm.

End point type	Primary

Secondary: Percentage of participants experiencing at least one Tier 1 safety event (key safety parameter) during the treatment period and first 14 follow-up days

End point title	Percentage of participants experiencing at least one Tier 1 safety event (key safety parameter) during the treatment period and first 14 follow-up days
-----------------	---

End point description:

Tier 1 safety events were pre-specified by the protocol to evaluate safety and test the safety superiority hypothesis. Tier 1 safety events were chosen to assess broad tolerability, hematological side effects and liver-related laboratory abnormalities. For this study, Tier 1 safety events included: any serious drug-related AE, any drug-related AE leading to permanent discontinuation (DC) of all study drugs, neutrophil count $<0.75 \times 10^9/L$, hemoglobin $<10 \text{ g/dL}$, severe depression, hepatic events of clinical interest (defined by abnormal increases in alanine aminotransferase [ALT], aspartate aminotransferase [AST], or alkaline phosphatase [ALP]), or events meeting stopping rule criteria for DC from trial (due to abnormal increases of ALT, AST, or ALP with/without pre-specified related AEs). The percentage of participants who experienced each individual event that was defined as a Tier 1 safety event during the study treatment period was reported for each treatment arm.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 June 2015	Protocol amendment 1 (AM1) made several revisions to the Inclusion Criteria, Trial Design, Rationale for Dose Selection/Regimen, Trial Flow Chart footnotes, Future Biomedical Research, Assessing and Recording AEs, and Definition of Overdose sections.
26 November 2015	AM2 added language for reporting pregnancy of a male participant's female partner and clarified a footnote to the Trial Flow Chart regarding dosing.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
