

Clinical trial results:

A single blinded, randomized, controlled study to evaluate the safety and effectiveness of EVICEL® Fibrin sealant (Human) compared to a Hydrogel

sealant as an adjunct to sutured dural repair

Summary

EudraCT number	2014-003954-15
Trial protocol	GB BE
Global end of trial date	12 October 2017

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 November 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 October 2017
Global end of trial reached?	Yes
Global end of trial date	12 October 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this study was to evaluate the safety and efficacy of EVICEL® Fibrin Sealant (Human) for use as an adjunct to sutured dural repair in cranial surgery

Protection of trial subjects:

The protocol and consent form were provided to the appropriate ethics committee for review and approval.

Background therapy:

Not applicable.

Evidence for comparator:

The comparator for this trial was DuraSeal™ Dural Sealant System. The efficacy and safety of DuraSeal™ Dural Sealant System as an adjunct to sutured dural repair to obtain watertight closure during cranial surgery was demonstrated in a prospective multicenter study of 111 patients. DuraSeal™ was 100% effective in obtaining watertight closure. Efficacy was also demonstrated in another multicenter single-blind prospective randomized trial in 237 patients exhibiting non-watertight dural closure during cranial surgery which showed the safety profile of DuraSeal™ to be similar to other commonly used dural closure techniques.

DuraSeal™ Dural Sealant System is a commercially available synthetic sealant intended for use as an adjunct to sutured dural repair during cranial surgery to provide watertight closure. The product is a synthetic absorbable sealant composed of a polyethylene glycol (PEG) ester solution and a rilysine amine solution.

DuraSeal™ Dural Sealant is approved in the US (since 2005), in EU (since 2003) and in numerous countries world-wide.

Actual start date of recruitment	01 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 71
Country: Number of subjects enrolled	Belgium: 44
Country: Number of subjects enrolled	Australia: 21
Country: Number of subjects enrolled	New Zealand: 23
Country: Number of subjects enrolled	United States: 75
Worldwide total number of subjects	234
EEA total number of subjects	115

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	171
From 65 to 84 years	60
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

The first patient was recruited on 7th July 2015 and the last patient, last visit was 12th October 2017.

Pre-assignment

Screening details:

Prospective patients were screened within 30 days prior to surgery. Prior to any study specific procedures, subjects were fully informed of all aspects of the study, and the consenting process was documented.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Blinding implementation details:

This was a single-blinded study where the subject was blinded to treatment. Subjects remained blinded throughout the trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	EVICEL® Fibrin Sealant (Human)

Arm description:

EVICEL® is a human plasma-derived fibrin sealant consisting of two components: Human Fibrinogen (also named Biologically Active Component 2 (BAC2), and Human Thrombin containing Calcium (EVICEL® Fibrin Sealant (Human).

Arm type	Experimental
Investigational medicinal product name	DuraSeal™ Dural Sealant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Sealant
Routes of administration	Topical use

Dosage and administration details:

For subjects randomized to DuraSeal™, the assigned product was applied to the entire length of the suture line, including all suture holes, according to the manufacturer's instruction for use. No patient received more than 10ml.

Investigational medicinal product name	EVICEL® Fibrin Sealant (Human)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Sealant
Routes of administration	Topical use

Dosage and administration details:

For each subject, at least one kit of EVICEL® (2ml each of BAC2 and Thrombin [total 4ml]) was pre-prepared in the applicator kit prior to randomization. EVICEL® was to be applied to the surgical site by either spraying or dripping onto the dural suture line. If necessary, a second layer of EVICEL® could be applied. No patient received more than 2 kits (8ml)

Arm title	DuraSeal™ Dural Sealant
------------------	-------------------------

Arm description:

DuraSeal™ Dural Sealant System is a synthetic absorbable sealant composed of a polyethylene glycol (PEG) ester solution and a lysine amine solution used as an adjunct to sutured dural repair during cranial surgery to provide watertight closure.

Arm type	Synthetic Sealant
No investigational medicinal product assigned in this arm

Statistical analyses

Statistical analysis title	Primary Endpoint
Statistical analysis description:	
The statistical hypothesis for testing the treatment difference is presented as follows:	
H0: $\Delta \leq 0.10$ tested against the alternative hypothesis	
Ha: $\Delta > 0.10$.	
where:	
Δ is the difference between the success rates of Experimental and Control (Experimental minus Control)	
0.10 is the noninferiority difference	
The assumed proportion of successes for Control is 0.95	
Comparison groups	EVICEL® Fibrin Sealant (Human) v DuraSeal™ Dural Sealant
Number of subjects included in analysis	208
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[3]
Method	Wald CI
Parameter estimate	non-inferiority
Point estimate	0.063
Confidence interval	
level	Other: 97.5 %
sides	1-sided
lower limit	-0.018
Variability estimate	Standard deviation

Notes:

[3] - The study is one-sided, non-inferiority, using the 97.5% level (one sided significance level of 0.025). The primary endpoint is CSF leak to 30 days post-surgery.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were recorded as they were reported, whether spontaneously, volunteered, or in response to questioning about well-being. AEs were collected from the start of randomization during the procedure, through the hospital admission, and until completion

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 February 2015	<p>Up-dated to clarify inclusion/exclusion criteria.</p> <p>Craniotomy edge up-dated to be based on surgeon's standard practice.</p> <p>Exclusion of radio therapy within 2 years of procedure was removed.</p> <p>Clarified signs/symptoms of systemic infection.</p> <p>Additional text add to provide clarity on subjects with hydrocephalus. Occlusive hydrocephalus patients were originally excluded. Up-dated to "Hydrocephalus, except occlusive hydrocephalus caused by posterior fossa pathology or incompletely open cerebrospinal fluid pathways, to be treated during surgical procedure.</p> <p>Cuff of native dura along craniotomy edge was defined as ≥ 10mm wide was up-dated to remove width and be based on surgeon's standard practice.</p> <p>Typographical error regarding tip size. Corrected from 6cm to 4cm.</p> <p>Laboratory/Coagulation/Pregnancy evaluations moved from screening to baseline.</p> <p>Up-dated to clarify must be conducted within 24 hours of surgery.</p> <p>Up-date to contact list</p>
17 November 2015	<p>Introduction</p> <p>Clarify that the referenced clinical studies were multicentre, prospective, controlled, randomized</p> <p>Clarify that the potential neurotoxic effects have been demonstrated in experimental in-vivo studies for QUIXIL/CROSSEAL. Information from clinical studies indicated no particular safety concerns</p> <p>Reference to "Dural repair site" added to paragraph for clarity</p> <p>Introduction stated "for use in tissue adhesion/sealing and suture support in neurosurgery". The word "adhesion" was removed as this is a sealing study only</p> <p>Procedure Section</p> <p>Clarify EVICEL® application + to be more consistent with standard surgical practice. Removal of text defining 5mm margin was required. Cure time between layers was up-dated from allowing polymerization to "allow for the EVICEL® clot formation + stabilization"</p> <p>Clarify that patients treated with EVICEL® could not receive DuraSeal™ or any other PEG based or fibrin sealants</p> <p>Add "cranial" before dural lesion for clarity</p> <p>Refer to OR/theatre rather sterile field</p> <p>Confirm that DuraSeal™ must be removed from OR/theatre (originally referred to as sterile field)</p> <p>Incl/Excl</p> <p>No chemotherapy or radiation therapy within 30 days prior to enrollment. Time frame added to be more consistent with surgical practice</p> <p>Traumatic head injuries up-dated to include "penetrating" traumatic injuries to the head with damage to the dura</p> <p>Included "cranial". Two or more separate "cranial" dural defects</p> <p>Other</p> <p>Up-dated contact list(s)</p> <p>Typographical up-date. Added word "maneuver" after valsalva</p> <p>Reference to unopened vials being stored at 25 days in EU/ANZ removed</p> <p>Lab evaluations up-dated to be within 7 days of procedure</p> <p>Removal of coagulation sample</p> <p>Data analysis up-dated to include two-sided 5% significance</p> <p>Definition of inpatient hospitalization up-dated</p> <p>Source for assessing SUSARs up-dated to include product labelling</p>

16 May 2016	<p>Incl/Excl</p> <p>Up-dated to state that approved fibrin sealants may be used for haemostasis if not in contact with dura</p> <p>Two or more separate cranial dural defects up-dated to include the text “including defects from ventricular cannulation and ventriculo-peritoneal shunting”</p> <p>Procedure</p> <p>Up-dated to confirm that the use of onlays is not allowed if watertight closure is achieved for EVICEL®/DuraSeal™</p> <p>Up-dated to confirm DuraSeal™ patients should not receive EVICEL® in the study treatment area.</p> <p>Other</p> <p>Number of sites increased from 25 to 30</p> <p>Up-dates to contact list</p>
-------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Limitations : None

Caveats : As lower limit of two-sided 95% CI for difference in proportions of success (Evicel® minus Duraseal™) (-0.018) is greater than non-inferiority margin (-0.10), the non-inferiority of Evicel® to Duraseal™ is demonstrated.

Notes:
