Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 November 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study is to evaluate the safety and effectiveness of the study drug known as abemaciclib in participants with hormone receptor positive breast cancer, non-small cell lung cancer (NSCLC), or melanoma that has spread to the brain.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 April 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	1 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Belgium: 18
Country: Number of subjects enrolled	United States: 71
Country: Number of subjects enrolled	Italy: 15
Country: Number of subjects enrolled	Israel: 6
Country: Number of subjects enrolled	Australia: 9
Country: Number of subjects enrolled	France: 32
Country: Number of subjects enrolled	Spain: 7
Worldwide total number of subjects	162
EEA total number of subjects	73

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	123
From 65 to 84 years	39
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

No Text Available

Pre-assignment

Screening details:

Completers include participants who died or discontinued study treatment due to progressive disease and is in follow up.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A Abemaciclib: Hormone Receptor (HR+) HER2+ Breast Cancer

Arm description:

Abemaciclib 200 milligram (mg) was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or in combination with endocrine therapy (ET). Participants with hormone receptor positive (HR+), hormone epidermal growth factor receptor 2 positive (HER2+) breast cancer receiving concurrent trastuzumab, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 milligram (mg) was administered orally once every 12 hours on days 1-21 of a 21-day cycle.

Arm title	Part B Abemaciclib: HR+, HER2- Breast Cancer
------------------	--

Arm description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or in combination with endocrine therapy (ET).

Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	LY2835219
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle

Arm title	Part C Abemaciclib: Surgical Resection
------------------	--

Arm description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or for participants with breast cancer in combination with endocrine

therapy (ET). Participants with HR+, HER2+ breast cancer, NSCLC, or melanoma with intracranial lesions for which surgical resection is clinically indicated receiving concurrent trastuzumab, gemcitabine, or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours for 5-14 days prior to surgical resection. Dosing may resume following wound healing on a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle

Arm title	Part D Abemaciclib: Non-Small Cell Lung Cancer (NSCLC)
------------------	--

Arm description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants with NSCLC receiving concurrent gemcitabine or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	LY2835219
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle

Arm title	Part E Abemaciclib: Melanoma
------------------	------------------------------

Arm description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	LY2835219
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle

Arm title	Part F Abemaciclib: HR+ Breast Cancer, NSCLC, or Melanoma
------------------	---

Arm description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or for participants with breast cancer in combination with endocrine therapy (ET). Participants with HR+ (either HER2+ or HER2-) breast cancer, NSCLC, or melanoma and leptomeningeal metastases received concurrent trastuzumab, gemcitabine, or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Arm type	Experimental
Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	LY2835219
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle

Baseline characteristics

Reporting groups

Reporting group title	Part A Abemaciclib: Hormone Receptor (HR+) HER2+ Breast Cancer
-----------------------	--

Reporting group description:

Abemaciclib 200 milligram (mg) was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or in combination with endocrine therapy (ET). Participants with hormone receptor positive (HR+), hormone epidermal growth factor receptor 2 positive (HER2+) breast cancer receiving concurrent trastuzumab, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part B Abemaciclib: HR+, HER2- Breast Cancer
-----------------------	--

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or in combination with endocrine therapy (ET).

Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part C Abemaciclib: Surgical Resection
-----------------------	--

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or for participants with breast cancer in combination with endocrine therapy (ET). Participants with HR+, HER2+ breast cancer, NSCLC, or melanoma with intracranial lesions for which surgical resection is clinically indicated receiving concurrent trastuzumab, gemcitabine, or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours for 5-14 days prior to surgical resection. Dosing may resume following wound healing on a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part D Abemaciclib: Non-Small Cell Lung Cancer (NSCLC)
-----------------------	--

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants with NSCLC receiving concurrent gemcitabine or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part E Abemaciclib: Melanoma
-----------------------	------------------------------

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part F Abemaciclib: HR+ Breast Cancer, NSCLC, or Melanoma
-----------------------	---

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or for participants with breast cancer in combination with endocrine therapy (ET). Participants with HR+ (either HER2+ or HER2-) breast cancer, NSCLC, or melanoma and leptomeningeal metastases received concurrent trastuzumab, gemcitabine, or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

-----------------------	--

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants with NSCLC receiving concurrent gemcitabine or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part E Abemaciclib: Melanoma
-----------------------	------------------------------

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Reporting group title	Part F Abemaciclib: HR+ Breast Cancer, NSCLC, or Melanoma
-----------------------	---

Reporting group description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or for participants with breast cancer in combination with endocrine therapy (ET). Participants with HR+ (either HER2+ or HER2-) breast cancer, NSCLC, or melanoma and leptomeningeal metastases received concurrent trastuzumab, gemcitabine, or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Subject analysis set title	Part A Abemaciclib: HR+, HER2+ Breast Cancer
----------------------------	--

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle when administered as a single agent or in combination with endocrine therapy (ET). Participants with hormone receptor positive HR+, HER2+ breast cancer receiving concurrent trastuzumab, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive treatment until discontinuation criteria are met.

Subject analysis set title	Part D Abemaciclib: NSCLC
----------------------------	---------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

Abemaciclib 200 mg was administered orally once every 12 hours on days 1-21 of a 21-day cycle. Participants with NSCLC receiving concurrent gemcitabine or pemetrexed, 150 mg abemaciclib was given orally once every 12 hours on days 1-21 of a 21-day cycle. Participants may continue to receive

treatment until discontinuation criteria are met.

Subject analysis set title	Part A 150 mg Abemaciclib: HR+, HER2+ Breast Cancer
Subject analysis set type	Per protocol
Subject analysis set description: Participants with HR+, HER2+ breast cancer received 150 mg abemaciclib orally once every 12 hours on days 1-21 of a 21-day cycle.	
Subject analysis set title	Part B 200 mg Abemaciclib: HR+, HER2- Breast Cancer
Subject analysis set type	Per protocol
Subject analysis set description: Participants with HR+, HER2- breast cancer received 200 mg abemaciclib given orally once every 12 hours on days 1-21 of a 21-day cycle.	
Subject analysis set title	Part C 200 mg Abemaciclib: Surgical Resection
Subject analysis set type	Per protocol
Subject analysis set description: Participants with HR+ breast cancer, NSCLC, or melanoma with intracranial lesions for which surgical resection is clinically indicated received 200 mg abemaciclib given orally once every 12 hours for 5-14 days prior to surgical resection.	
Subject analysis set title	Part D 200 mg Abemaciclib: NSCLC
Subject analysis set type	Per protocol
Subject analysis set description: Participants with NSCLC received 200 mg abemaciclib given orally once every 12 hours on days 1-21 of a 21-day cycle.	
Subject analysis set title	Part E 200 mg Abemaciclib: Melanoma
Subject analysis set type	Per protocol
Subject analysis set description: Participants with melanoma received 200 mg abemaciclib given orally once every 12 hours on days 1-21 of a 21-day cycle.	
Subject analysis set title	Part F 200 mg Abemaciclib: HR+ Breast Cancer, NSCLC, Melanoma
Subject analysis set type	Per protocol
Subject analysis set description: Participants with HR+ (either HER2+ or HER2-) breast cancer, NSCLC, or melanoma and leptomeningeal metastases received 200 mg abemaciclib given orally once every 12 hours on days 1-21 of a 21-day cycle.	

Primary: Percentage of Participants Achieving Complete Response (CR) or Partial Response (PR): Objective Intracranial Response Rate (OIRR)

End point title	Percentage of Participants Achieving Complete Response (CR) or Partial Response (PR): Objective Intracranial Response Rate (OIRR) ^{[1][2]}
End point description: OIRR is the percentage of participants with a (CR) or (PR) based on the Response Assessment in Neuro-Oncology Brain Metastasis (RANO-BM) response criteria. CR is measurable target lesions, the disappearance of all central nervous system (CNS) target lesions for at least 4 weeks; no new lesions; no corticosteroids; stable or improved clinically. PR is at least a 30% decrease in the sum longest duration (LD) of CNS target lesions, taking as reference the baseline sum LD for at least 4 weeks; no new lesions; stable to decreased corticosteroid dose; stable or improved clinically. Nontarget lesions requires disappearance CNS non-target lesions and no new CNS lesions. Stable disease (SD) is less than (<)30% decrease relative to baseline but <20% increase in sum LD relative to nadir. Progressive disease (PD) is greater than or equal to (≥) 20% increase in sum LD relative to nadir and a relative increase of 20%, ≥1 lesion must increase by absolute value of ≥5 millimeter (mm).	
End point type	Primary

End point timeframe:

Baseline to Objective Disease Progression (Up to 36 Months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This is single arm cohort study, no comparison between arms were analyzed.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: All participants who had evaluable OIRR data with at least one measurable brain lesion at baseline (per RANO-BM) and for whom at least one post-baseline overall response assessment for intracranial disease is available. Parts C and F were exploratory per protocol.

End point values	Part A Abemaciclib: Hormone Receptor (HR+) HER2+ Breast Cancer	Part B Abemaciclib: HR+, HER2- Breast Cancer	Part D Abemaciclib: Non-Small Cell Lung Cancer (NSCLC)	Part E Abemaciclib: Melanoma
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	23 ^[3]	52 ^[4]	23 ^[5]	22 ^[6]
Units: percentage of participants				
number (not applicable)	0	5.8	0	0

Notes:

[3] - All participants who had evaluable OIRR data per RANO-BM.

[4] - All participants who had evaluable OIRR data per RANO-BM.

[5] - All participants who had evaluable OIRR data per RANO-BM.

[6] - All participants who had evaluable OIRR data per RANO-BM.

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with CR, PR, Stable Disease (SD), Progressive Disease (PD), or Not Evaluable (NE): Best Overall Intracranial Response (BOIR)

End point title	Percentage of Participants with CR, PR, Stable Disease (SD), Progressive Disease (PD), or Not Evaluable (NE): Best Overall Intracranial Response (BOIR) ^[7]
-----------------	--

End point description:

Percentage of Participants with BOIR was categorized as CR, PR, SD, PD or NE, as defined by RANO-BM, from baseline until the earliest of objective progression according to brain metastases response criteria or start of new anticancer therapy. CR is measurable target lesions, the disappearance of all CNS target lesions for at least 4 weeks; no new lesions; no corticosteroids; stable or improved clinically. PR is at least a 30% decrease in the sum LD of CNS target lesions, taking as reference the baseline sum LD for at least 4 weeks; no new lesions; stable to decreased corticosteroid dose; stable or improved clinically. SD is <30% decrease relative to baseline but <20% increase in sum LD relative to nadir. PD is greater than or equal to (≥) 20% increase in sum LD relative to nadir and a relative increase of 20%, ≥1 lesion must increase by absolute value of ≥5 mm. NE is absent (no abnormality; normal), or non-evaluable (NE).

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline to Earliest Objective Progression or Start of New Anticancer Therapy (Up to 36 Months)

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: All participants who had evaluable OIRR data with at least one measurable brain lesion at baseline (per RANO-BM) and for whom at least one post-baseline overall response assessment for intracranial disease is available. Parts C and F were exploratory per protocol.

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of CR or PR: Duration of Intracranial Response (DOIR)

End point title	Duration of CR or PR: Duration of Intracranial Response
-----------------	---

End point description:

DOIR is measured from the date of first evidence of a confirmed response (CR or PR), as defined by RANO-BM, to the date objective progression or death from any cause. CR is measurable target lesions, the disappearance of all CNS target lesions for at least 4 weeks; no new lesions; no corticosteroids; stable or improved clinically. PR is at least a 30% decrease in the sum LD of CNS target lesions, taking as reference the baseline sum LD for at least 4 weeks; no new lesions; stable to decreased corticosteroid dose; stable or improved clinically. Participants who have neither progressed nor died were censored on the day of their last radiographic tumor assessment or on the date of response. PD is greater than or equal to (\geq) 20% increase in sum LD relative to nadir and a relative increase of 20%, ≥ 1 lesion must increase by absolute value of ≥ 5 mm. DOIR was summarized using Kaplan-Meier estimates.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 August 2015	Protocol amendment (a) Incorporated patients with brain metastases secondary to NSCLC or Replaced CDK 4/6 with CDK4 and CDK6 for clarity Updated accordingly to incorporate NSCLC and melanoma information and clarify breast cancer Included Parts D and E and clarified previously Irradiated progressive lesions; Specified parts for HR+ and HER2+ breast cancer patients, and NSCLC patients with respect to concomitant/concurrent therapies; Clarified use of trastuzumab in HER2+ breast cancer patient parts; Clarified Parts for breast cancer patients Incorporated male birth control and sperm donation language Updated exclusion criteria breast cancer patients; parts for evidence of leptomeningeal metastases; parts for previous treatment with CDK4 and CDK6 inhibitor; deleted criterion Clarified discontinuation of abemaciclib Incorporated NSCLC and melanoma language and updated study design illustration Updated treatment regimens, modified supportive management for diarrhea, permitted combination therapies, surgery/surgical resection, efficacy assessments and measures, drug concentration Incorporated NSCLC and melanoma information in sample size Updated the Parts in secondary outcomes and methodology, trial making tests, drug concentrations in samples, health outcomes analyses, and interim analyses Updated Study Schedule Incorporated RANO-BM and RANO LM information Modified sampling and sampling summary Parts
08 February 2019	Protocol amendment (d) Included TBL and VTE in abbreviations Incorporated rationale for Amendment (d) to update safety monitoring Information for hepatic conditions, renal function, and VTEs. Modified alignment with safety updates. Updated requirements for AE/SAE reporting Incorporated safety monitoring language for hepatic conditions, renal function, and VTEs. CYPs text updated to align with abemaciclib program information

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
