

## Clinical trial results:

**A Phase III, multi-center, randomized, double-blind, 48 week study with an initial 12 week placebo-controlled period to evaluate the safety and efficacy of osilodrostat in patients with Cushing's disease**

### Summary

EudraCT number	2014-004092-23
Trial protocol	ES GR BE PL PT
Global end of trial date	31 December 2020

### Results information

Result version number	v1 (current)
This version publication date	21 August 2021
First version publication date	21 August 2021

### Trial information

#### Trial identification

Sponsor protocol code	CLCI699C2302
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02697734
WHO universal trial number (UTN)	-

Notes:

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 December 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 December 2020
Global end of trial reached?	Yes
Global end of trial date	31 December 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Primary objective: To demonstrate the superiority of osilodrostat compared to placebo in achieving a complete response ( $mUFC \leq ULN$ ) at Week 12.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 October 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Brazil: 9
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	China: 12
Country: Number of subjects enrolled	Costa Rica: 3
Country: Number of subjects enrolled	Greece: 2
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Portugal: 1
Country: Number of subjects enrolled	Russian Federation: 6
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Thailand: 5
Country: Number of subjects enrolled	Turkey: 2
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	74
EEA total number of subjects	24

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	72
From 65 to 84 years	2
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Number of subjects - enrolled: 74; analyzed: 73 (One patient was randomized but did not receive any study treatment as the patient experienced an SAE and discontinued the study)

### Pre-assignment

Screening details:

Full Analysis Set: comprises all randomized participants who received at least one dose of study drug (osilodrostat or placebo).

There are 73 participants in the FAS who were randomized and received treatment.

### Period 1

Period 1 title	Core phase - up to week 48
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	osilodrostat Group

Arm description:

Participants in this arm were randomized to receive the study drug, osilodrostat, followed after Week 12 by open-label osilodrostat at the starting dose (with a second dose titration).

Arm type	Experimental
Investigational medicinal product name	Osilodrostat
Investigational medicinal product code	LCI699
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

The starting dose in Period 1 was 2 mg b.i.d. osilodrostat. Osilodrostat dosing regimen included up-titration following a 5 mg b.i.d., 10 mg b.i.d. and 20 mg b.i.d. escalation sequence during Period 1.

<b>Arm title</b>	osilodrostat Placebo Group
------------------	----------------------------

Arm description:

Participants in this arm were randomized to receive osilodrostat placebo followed after Week 12 by open-label osilodrostat at the starting dose (with a dose titration).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablet for oral use

<b>Number of subjects in period 1</b> <sup>[1]</sup>	osilodrostat Group	osilodrostat Placebo Group
Started	48	25
Completed	42	23
Not completed	6	2
Consent withdrawn by subject	4	-
Physician decision	1	-
Adverse event, non-fatal	1	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 5 participants completed core phase and did not enter the optional extension phase.

## Period 2

Period 2 title	Optional Extension phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	osilodrostat Group

Arm description:

Participants in this arm were randomized to receive the study drug, osilodrostat, followed after Week 12 by open-label osilodrostat at the starting dose (with a second dose titration).

Arm type	Experimental
Investigational medicinal product name	Osilodrostat
Investigational medicinal product code	LCI699
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

In Period 2, the maximum starting dose of osilodrostat was 2 mg b.i.d., and could be <2 mg if they were receiving osilodrostat or placebo at a dose <2mg b.i.d. at the end of Period 1. Osilodrostat dosing regimen included up-titration following a 2 mg b.i.d., 5 mg b.i.d., 10 mg b.i.d., 20 mg b.i.d. and 30 mg b.i.d. escalation sequence during Period 2.

<b>Arm title</b>	osilodrostat Placebo Group
------------------	----------------------------

Arm description:

Participants in this arm were randomized to receive osilodrostat placebo followed after Week 12 by open-label osilodrostat at the starting dose (with a dose titration).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo tablet for oral use

Number of subjects in period 2 <sup>[2]</sup>	osilodrostat Group	osilodrostat Placebo Group
Started	38	22
Completed	33	20
Not completed	5	2
Physician decision	-	1
Adverse event, non-fatal	5	1

---

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Number of subjects; enrolled: 74; analyzed: 73 (One patient was randomized but did not receive any study treatment as the patient experienced an SAE and discontinued the study)

## Baseline characteristics

### Reporting groups

### Primary: Percentage of randomized participants with a complete response

End point title	Percentage of randomized participants with a complete response
End point description: A complete responder at week 12 is defined as a participant who had a mean urine free cortisol $\leq$ upper limit of normal (mUFC $\leq$ ULN) at Week 12.  Participants who had a missing mUFC assessment at Week 12 were counted as non-responders for the primary endpoint.	
End point type	Primary

## Secondary: Change from baseline in EQ-5D-5L Utility Index

End point title	Change from baseline in EQ-5D-5L Utility Index
End point description:	
EQ-5D-5L Utility Index:	
The EQ-5D-5L questionnaire is a standardized measure of health status developed by the EuroQol Group in order to provide a simple, generic measure of health for clinical and economic appraisal. The EQ-5D-5L measures 5 items on mobility, self-care, usual activities, pain/discomfort, anxiety/depression, measured on 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. A utility index can be computed from the EQ 5D-5L descriptive system with utility scores ranging from -0.281 (worst imaginable health state) to 1 (best imaginable health state), with -0.281 representing an "unconscious" health state. A single index value is analyzed for the EQ-5D-5L score. An increase from baseline in the EQ-ED-5L utility index is indicative of an improvement.

### Secondary: Change from baseline in EQ-5D VAS

End point title	Change from baseline in EQ-5D VAS
-----------------	-----------------------------------

End point description:

The EQ-5D-5L also includes a 20 cm vertical, VAS (visual analogue scale) with a scale of 0-100, with endpoints labeled 100='the best health you can imagine' and 0='the worst health you can imagine'. A single index value is analyzed for the EQ-5D-5L VAS score. An increase from baseline in the EQ-ED-5L VAS is indicative of an improvement.

End point type	Secondary

### Secondary: Change from baseline in Beck Depression Inventory-II - Total Score Derived

End point title	Change from baseline in Beck Depression Inventory-II - Total Score Derived
-----------------	--

End point description:

The Beck Depression Inventory II (BDI-II) is a patient reported instrument that consists of 21 items designed to assess the intensity of depression in clinical and normal patients in the preceding two weeks. Each item is a list of four statements arranged in increasing severity about a particular symptom of depression. A global score ranges from 0 to 63 and is calculated with a higher score representing a

greater level of depression. The following scoring guidelines for interpretation of BDI-II have been suggested (Smarr, 2011): Minimal range =0-13, Mild depression =14-19, Moderate depression =20-28 and Severe depression = 29-63. A reduction from baseline in BDI-II is indicative of an improvement.

## Secondary: Change from baseline in Standardized Health Related Quality of Life score, using Cushing Disease-specific Quality of Life Patient Reported Outcome (PRO) Assessment

End point title	Change from baseline in Standardized Health Related Quality of Life score, using Cushing Disease-specific Quality of Life Patient Reported Outcome (PRO) Assessment
-----------------	---

End point description:

The CushingQoL is a valid and reliable disease-specific QoL questionnaire which assesses health-related quality of life (HRQoL) in patients with Cushing's syndrome and has been validated in patients with Cushing's disease. The CushingQoL consists of questions reflecting dimensions of HRQoL related to physical aspects (e.g. 'I bruise easily'), psychological aspects (e.g. 'I am more irritable, I have sudden mood swings and angry outbursts'), and social aspects (e.g. 'I have had to give up my social or leisure activities due to my illness').

The questionnaire consists of 12 items measured on a five point Likert-type scale assessing how often or how much each item has been related to the patient's Cushing's disease in the previous week. The raw score is calculated by summing the individual item scores prior to being standardized so that the total score ranges from 0 to 100. Increases from baseline are indicative of an improvement.

End point type	Secondary

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 November 2017	<ul style="list-style-type: none"><li>- Issued when 18 patients had been enrolled in the study. The following key changes were made:</li><li>- The list of prohibited medications was revised to remove "all drugs known to prolong QT". The list of prohibited medications known to cause TdP, or with a possible risk to cause TdP, was reduced. This was based on evidence from the thorough QT study CLCI699C2105.</li><li>- The risks section was updated to include neutropenia.</li><li>- The duration of the optional extension period was increased in order to collect additional long-term safety and efficacy data and allow continued access to the study drug as required.</li><li>- Secondary objective endpoints were added: change from baseline in serum, salivary and hair cortisol levels, actual and percentage change in biomarkers of hypercortisolism.</li></ul>
20 December 2019	<p>Issued when all patients had been enrolled. The following key changes were made:</p> <ul style="list-style-type: none"><li>- Changed the end of study definition</li><li>- Removed Beck Depression Inventory (BDI) from Appendix 3 as Beck's Depression Inventory was not used in the study. For this study, the BDI-II was used</li><li>- Appendix 3 (Patient Quality of Life questionnaires) removed</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
