

Clinical trial results:

Treatment With Recombinant Human Growth Hormone Genotonorm (Registered) in Children With Short Stature Secondary to a Long Term Corticoid Therapy. A Study of Efficacy and Safety.

Summary

EudraCT number	2014-004104-30
Trial protocol	Outside EU/EEA
Global end of trial date	23 September 2011

Results information

Result version number	v1
This version publication date	29 March 2016
First version publication date	09 July 2015

Trial information

Trial identification

Sponsor protocol code	307-MET-9002-0009
-----------------------	-------------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00174187
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 March 2012
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	23 September 2011
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the effect of a long-term treatment by Genotonorm on linear growth in children with short stature receiving steroid therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 September 2000
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 30
Worldwide total number of subjects	30
EEA total number of subjects	30

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	17
Adolescents (12-17 years)	13
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This study was conducted in France. The study start date was 21 September 2000 and study end date was 23 September 2011.

Period 1

Period 1 title	Period 1 (up to 3 years)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)

Arm description:

Subjects with juvenile idiopathic arthritis (JIA) received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Arm type	Experimental
Investigational medicinal product name	Somatropin
Investigational medicinal product code	
Other name	Genotonorm, Genotropin
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received somatropin 1.4 International Units per kilogram per week (IU/kg/week), equivalent to 0.46 milligram/kg/week (mg/kg/week), divided in 7 daily doses for up to 3 years.

Arm title	Somatropin- Up To Year 3 (Nephrotic Syndrome)
------------------	---

Arm description:

Subjects with nephrotic syndrome (NeS) received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Arm type	Experimental
Investigational medicinal product name	Somatropin
Investigational medicinal product code	
Other name	Genotonorm, Genotropin
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received somatropin 1.4 IU/kg/week, equivalent to 0.46 mg/kg/week, divided in 7 daily doses for up to 3 years.

Number of subjects in period 1	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)	Somatropin- Up To Year 3 (Nephrotic Syndrome)
Started	15	15
Completed	15	11
Not completed	0	4
Consent withdrawn by subject	-	1
Non compliance	-	1
Unspecified	-	1
Serious adverse event	-	1

Period 2

Period 2 title	Between Period 1 and Period 2
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Somatropin- After Year 3
Arm description: Included subjects with JIA or NeS who received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years in this study.	
Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 2	Somatropin- After Year 3
Started	26
Consented	24
Completed	21
Not completed	5
Did not consent to continue treatment	2
Consented, not assigned to treatment	3

Period 3

Period 3 title	Period 2 (after 3 years)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Somatropin- After Year 3
------------------	--------------------------

Arm description:

Subjects with JIA/NeS, who consented to receive treatment beyond 3 years, received somatropin (Genotropin, Genotonorm) 1.4 IU/kg/week subcutaneously until the additional study drug dose evaluation visit and thereafter received somatropin (Genotropin, Genotonorm) up to 50 microgram per kilogram per day (mcg/kg/day) subcutaneously until the final height (FH) was reached or up to Year 11. Final height was confirmed to have been achieved if the growth velocity was less than or equal to (\leq) 1.5 centimeter (cm) per year during the preceding 12 months and bone age was greater than or equal to (\geq) 17 years for boys and 15 years for girls.

Arm type	Experimental
Investigational medicinal product name	Somatropin
Investigational medicinal product code	
Other name	Genotonorm, Genotropin
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received somatropin 1.4 IU/kg/week equivalent to 0.46 mg/kg/week divided in 7 daily doses until the additional study drug dose evaluation visit and thereafter received somatropin up to 50 mcg/kg/day until the FH was reached or up to Year 11.

Number of subjects in period 3	Somatropin- After Year 3
Started	21
Completed	13
Not completed	8
Consent withdrawn by subject	1
Unspecified	5
Lost to follow-up	2

Baseline characteristics

Reporting groups

Reporting group title	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)
-----------------------	--

Reporting group description:

Subjects with juvenile idiopathic arthritis (JIA) received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Reporting group title	Somatropin- Up To Year 3 (Nephrotic Syndrome)
-----------------------	---

Reporting group description:

Subjects with nephrotic syndrome (NeS) received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Reporting group values	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)	Somatropin- Up To Year 3 (Nephrotic Syndrome)	Total
Number of subjects	15	15	30
Age categorical Units: Subjects			

Age Continuous Units: years arithmetic mean standard deviation	11.14 ± 3.32	11.96 ± 3.8	-
Gender, Male/Female Units: participants			
Female	9	2	11
Male	6	13	19

End points

End points reporting groups

Reporting group title	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)
Reporting group description: Subjects with juvenile idiopathic arthritis (JIA) received somatropin (Genotropin, Genotonorm) subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Primary: Change from Baseline in Height Standard Deviation Score According to Chronological Age (SDS/CA) at Year 3

End point title	Change from Baseline in Height Standard Deviation Score According to Chronological Age (SDS/CA) at Year 3 ^[1]
End point description: Height was measured using a wall mounted device (example, Harpenden stadiometer). Height SDS/CA was obtained by measuring the height, subtracting chronological age- and gender-appropriate mean height and dividing the result by standard deviation of that mean (as obtained from chronological age- and gender-specific population reference data). SDS indicated how many standard deviations higher (in case of positive SDS) or lower (in case of negative SDS) subject's value was relative to the mean of the reference population. Full Analysis Set (FAS) up to Year 3: included all subjects who had at least 1 post-baseline height measurement and were treated with the study drug for at least 1 year.	
End point type	Primary
End point timeframe: Baseline, Year 3	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive data was planned to be reported for this endpoint.	

End point values	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)	Somatropin- Up To Year 3 (Nephrotic Syndrome)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	15		
Units: Standard Deviation Score (SDS)				

median (inter-quartile range (Q1-Q3))				
Baseline	-3.6 (-5.1 to -2.3)	-2.5 (-2.8 to -2.2)		
Change at Year 3	0.2 (-1.5 to 1.8)	1.1 (0.8 to 1.5)		

Statistical analyses

No statistical analyses for this end point

Primary: Change from Baseline in Height Standard Deviation Score According to Chronological Age (SDS/CA) at Final Height

End point title	Change from Baseline in Height Standard Deviation Score According to Chronological Age (SDS/CA) at Final Height ^[2]
-----------------	--

End point description:

Height was measured using a wall mounted device (example, Harpenden stadiometer). Height SDS/CA was obtained by measuring the height, subtracting chronological age- and gender-appropriate mean height and dividing the result by standard deviation of that mean (as obtained from chronological age- and gender-specific population reference data). SDS indicated how many standard deviations higher (in case of positive SDS) or lower (in case of negative SDS) subject's value was relative to the mean of the reference population. FAS- after Year 3: included all subjects who received at least 1 dose of the study treatment and who had at least 1 post-baseline height measurement. Here, 'n' signifies those subjects who were evaluable for this measure at given time points.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, when final height was reached (assessed up to Year 11)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported for this endpoint.

Other pre-specified: Growth Velocity Standard Deviation Score According to Bone Age (GV [SDS/BA])

End point title	Growth Velocity Standard Deviation Score According to Bone Age (GV [SDS/BA])
-----------------	--

End point description:

GV measures the annual rate of increase in height. GV (SDS/BA) was obtained by measuring GV, subtracting the bone age- and gender-appropriate mean GV and dividing the result by standard deviation of that mean (as obtained from bone age- and gender-specific population reference data). SDS indicated how many standard deviations higher (in case of positive SDS) or lower (in case of negative SDS) subject's value was relative to the mean of the reference population. FAS up to Year 3: included all subjects who had at least one post-baseline height measurement and were treated with the study drug for at least 1 year. Here, 'n' signifies those subjects who were evaluable for this measure at the given time point for each group respectively.

End point type	Other pre-specified

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 7 days after last dose of study drug

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as nonserious in another subject, or one subject may have experienced both a serious and nonserious event during the study.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Somatropin- Up To Year 3 (Juvenile Idiopathic Arthritis)
-----------------------	--

Reporting group description:

Subjects with JIA received somatropin (Genotropin, Genotonorm) 1.4 IU/kg/week, equivalent to 0.46 mg/kg/week, divided in 7 daily doses subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Reporting group title	Somatropin- Up To Year 3 (Nephrotic Syndrome)
-----------------------	---

Reporting group description:

Subjects with NeS received somatropin (Genotropin, Genotonorm) 1.4 IU/kg/week, equivalent to 0.46 mg/kg/week, divided in 7 daily doses subcutaneously for up to 3 years. After treatment for 3 years, subjects in this group were assigned to Somatropin- After Year 3 group.

Reporting group title	Somatropin- After Year 3
-----------------------	--------------------------

Reporting group description:

Subjects with JIA/NeS, who consented to receive treatment beyond 3 years, received somatropin (Genotropin, Genotonorm) 1.4 IU/kg/week, equivalent to 0.46 mg/kg/week divided in 7 daily doses subcutaneously until the additional study drug dose evaluation visit and thereafter received somatropin (Genotropin, Genotonorm) up to 50 mcg/kg/day subcutaneously until the FH was reached or up to Year 11. Final height was confirmed to have been achieved if the growth velocity was ≤ 1.5 cm per year during the preceding 12 months and bone age was ≥ 17 years for boys and 15 years for girls.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 August 2001	The study duration was increased from 48 months to 69 months.
20 October 2003	For the children who did not wish to continue the treatment beyond 36 months, it was proposed that they had to undergo an evaluation of body composition by a DEXA scan and glucose tolerance by an oral glucose tolerance test, 1 year after the discontinuation of treatment.
29 November 2007	Treatment with somatropin was adapted according to IGF-1 level. If the level of IGF-1 was greater than ($>$)+2 standard deviation (SD) for the chronological age and sex, the dose of the growth hormone was to be decreased by 20 percent (%).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Results for secondary and other pre-specified endpoints (except IGF-1) are reported for only up to 3 years because data beyond Year 3 was not summarized as the study was terminated due to Good Clinical Practice (GCP) non-compliance issues.

Notes:
