

## Clinical trial results:

### An Open Label Extension of Study HGT-HIT-094 Evaluating Long Term Safety and Clinical Outcomes of Intrathecal Idursulfase Administered in Conjunction with ELAPRASE® in Patients with Hunter Syndrome and Cognitive Impairment

#### Summary

EudraCT number	2014-004143-13
Trial protocol	GB ES FR
Global end of trial date	18 April 2024

#### Results information

Result version number	v1 (current)
This version publication date	02 November 2024
First version publication date	02 November 2024

#### Trial information

##### Trial identification

Sponsor protocol code	SHP609-302
-----------------------	------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02412787
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Shire Human Genetic Therapies, Inc.
Sponsor organisation address	300 Shire Way, Lexington, Massachusetts, United States, 02421
Public contact	Study Director, Takeda, N/A N/A, TrialDisclosures@takeda.com
Scientific contact	Study Director, Takeda, N/A N/A, TrialDisclosures@takeda.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 April 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 April 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main purpose of this study was to evaluate the long-term safety of intrathecal (IT) idursulfase-IT along with standard-of-care therapy with elaprase in participants with Hunter Syndrome who completed Study HGT-HIT-094 (NCT02055118).

Protection of trial subjects:

Each participant signed an informed consent form (ICF) before participating in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 April 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Mexico: 4
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 35
Worldwide total number of subjects	56
EEA total number of subjects	9

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1
Children (2-11 years)	54

Adolescents (12-17 years)	1
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants took part in the study at 22 investigative sites in Australia, Canada, France, Mexico, Spain, the United Kingdom, and the United States of America (USA) from 14 April 2015 to 18 April 2024.

### Pre-assignment

Screening details:

A total of 56 participants with a diagnosis of Hunter Syndrome who completed the Study HGT-HIT-094 (NCT02055118) received idursulfase-IT in conjunction with elaprase therapy.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Idursulfase-IT
-----------	----------------

Arm description:

Participants received 10 milligrams (mg) of idursulfase-IT intrathecally via intrathecal drug delivery device (IDDD) or lumbar puncture (LP) once every 28 days along with standard-of-care therapy with elaprase for 480 weeks. Participants who were younger than 3 years of age received an adjusted dose of 7.5 mg (>8 months to 30 months of age) or 10 mg (>30 months to 3 years of age) of idursulfase-IT.

Arm type	Experimental
Investigational medicinal product name	Elaprase
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Elaprase as standard-of-care for 480 weeks.

Investigational medicinal product name	Idursulfase-IT
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Idursulfase-IT once every 28 days for 480 weeks.

Number of subjects in period 1	Idursulfase-IT
Started	56
Completed	23
Not completed	33
Termination by Sponsor	21
Termination by Investigator	1
Technical Problems	1

Withdrawal by Subject	9
Reason not Specified	1

## Baseline characteristics

### Reporting groups

Reporting group title	Idursulfase-IT
Reporting group description:	
Participants received 10 milligrams (mg) of idursulfase-IT intrathecally via intrathecal drug delivery device (IDDD) or lumbar puncture (LP) once every 28 days along with standard-of-care therapy with elaprase for 480 weeks. Participants who were younger than 3 years of age received an adjusted dose of 7.5 mg (>8 months to 30 months of age) or 10 mg (>30 months to 3 years of age) of idursulfase-IT.

## End points

### End points reporting groups

Reporting group title	Idursulfase-IT
Reporting group description: Participants received 10 milligrams (mg) of idursulfase-IT intrathecally via intrathecal drug delivery device (IDDD) or lumbar puncture (LP) once every 28 days along with standard-of-care therapy with elaprase for 480 weeks. Participants who were younger than 3 years of age received an adjusted dose of 7.5 mg (>8 months to 30 months of age) or 10 mg (>30 months to 3 years of age) of idursulfase-IT.	
Subject analysis set title	Idursulfase-IT 10 mg, Delayed IT
Subject analysis set type	Full analysis
Subject analysis set description: The Delayed IT group included participants who were randomised to the no IT treatment cohort in Study HGT-HIT-094 and began IT treatment in Study SHP609-302.	
Subject analysis set title	Idursulfase-IT 10 mg, Early IT
Subject analysis set type	Full analysis
Subject analysis set description: The Early IT group included participants who were randomised to the IT treatment cohort in Study HGT-HIT-094 and continued in Study SHP609-302.	
Subject analysis set title	Idursulfase-IT 10 mg, Former Substudy
Subject analysis set type	Full analysis
Subject analysis set description: The Former Substudy group included participants who received IT treatment 5-10 mg in HGT-HIT-094 substudy.	

### Primary: Number of Participants With Adverse Events (AEs)

End point title	Number of Participants With Adverse Events (AEs) <sup>[1]</sup>
End point description: An AE is any noxious, pathologic, or unintended change in anatomical, physiologic, or metabolic function as indicated by physical signs, symptoms, or laboratory changes occurring in any phase of a clinical study, whether or not considered investigational product-related. The Safety Population included all the participants in Study SHP609-302 who underwent IDDD implantation or received at least 1 dose of study drug (full or partial).	
End point type	Primary
End point timeframe: Up to 9 years	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive analysis was planned for this endpoint.	

End point values	Idursulfase-IT			
Subject group type	Reporting group			
Number of subjects analysed	56			
Units: participants	56			

### Statistical analyses

No statistical analyses for this end point

### Primary: Maximum Observed Serum Concentration (C<sub>max</sub>) of Idursulfase

End point title	Maximum Observed Serum Concentration (Cmax) of Idursulfase <sup>[2]</sup>
-----------------	---

End point description:

Idursulfase concentrations in serum were determined using a validated Enzyme -Linked Immunosorbent Assay (ELISA) method. Concentration for Cmax is presented in this endpoint. The Pharmacokinetic Population included all the participants in Study SHP609-302 who received study drug and participated in the scheduled pharmacokinetic studies, and for whom at least 1 postdose pharmacokinetic blood sample was collected. Number of subjects analysed indicates the number of participants with data available for analyses.

End point type	Primary
----------------	---------

End point timeframe:

Predose and multiple time points post-dose at Week 100

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

## Secondary: Change From Baseline in Differential Ability Scales, Second Edition (DAS-II) Standard Cluster Scores at Month 67

End point title	Change From Baseline in Differential Ability Scales, Second Edition (DAS-II) Standard Cluster Scores at Month 67
-----------------	--

End point description:

DAS-II was used to assess all participants of age 2 years, 6 months or older. DAS-II comprises 2 overlapping batteries. Early Years battery (EYB) was designed for children ages 2 years, 6 months through 6 years, 11 months. The School Age Battery (SAB) was designed for children ages 7 years, 0 months through 17 years, 11months. These batteries are fully co-normed for ages 5 years, 0 months, through 8 years, 11 months. The cluster areas include general conceptual ability (GCA), verbal, nonverbal, spatial, and special nonverbal composite (SNC). The cluster area score represents a score (mean=100 and standard deviation=15) on which higher scores=higher level of cognitive ability. Number of subjects analysed indicates the number of participants with data available for analyses. 'n' indicates the number of participants with data available for analyses for specified category.

## Secondary: Change From Baseline in Age Equivalents Score of the VABS-II Sub Domains at Month 67

End point title	Change From Baseline in Age Equivalents Score of the VABS-II Sub Domains at Month 67
-----------------	--

End point description:

The VABS-II test measures adaptive behaviours, including the ability to cope with environmental changes, to learn new everyday skills, and to demonstrate independence. This test measures the following subdomains of 5 key domains: Communication (Receptive, Expressive, Written), Daily Living Skills (Personal, Domestic, Community), Socialisation (Interpersonal Relationships, Play and Leisure Time, Coping Skills), Motor Skills (Gross, Fine). The mean age equivalent score was obtained by averaging out the age-equivalent scores for the all the sub-domains except for Gross and Fine motor skills (range: 0, unbound). The Safety Population included all the participants in Study SHP609-302 who underwent IDDD implantation or received at least 1 dose of study drug (full or partial). Number of subjects analysed indicates the number of participants with data available for analyses.

### Reporting groups

Reporting group title	Idursulfase-IT
-----------------------	----------------

Reporting group description:

Participants received 10 milligrams (mg) of idursulfase-IT intrathecally via intrathecal drug delivery device (IDDD) or lumbar puncture (LP) once every 28 days along with standard-of-care therapy with elaprase for 480 weeks. Participants who were younger than 3 years of age received an adjusted dose of 7.5 mg (>8 months to 30 months of age) or 10 mg (>30 months to 3 years of age) of idursulfase-IT.

Investigations			
Alanine aminotransferase increased			
subjects affected / exposed	11 / 56 (19.64%)		
occurrences (all)	19		
Albumin CSF increased			
subjects affected / exposed	12 / 56 (21.43%)		
occurrences (all)	17		
Aspartate aminotransferase increased			
subjects affected / exposed	5 / 56 (8.93%)		
occurrences (all)	6		
Blood bicarbonate decreased			
subjects affected / exposed	8 / 56 (14.29%)		
occurrences (all)	15		
Blood calcium decreased			
subjects affected / exposed	3 / 56 (5.36%)		
occurrences (all)	3		
Blood pressure diastolic decreased			
subjects affected / exposed	12 / 56 (21.43%)		
occurrences (all)	45		
Blood pressure diastolic increased			
subjects affected / exposed	13 / 56 (23.21%)		
occurrences (all)	24		
Blood pressure increased			
subjects affected / exposed	6 / 56 (10.71%)		
occurrences (all)	7		
Blood pressure systolic decreased			
subjects affected / exposed	14 / 56 (25.00%)		
occurrences (all)	46		
White blood cell count decreased			
subjects affected / exposed	4 / 56 (7.14%)		
occurrences (all)	6		
Red blood cells CSF positive			

subjects affected / exposed	7 / 56 (12.50%)		
occurrences (all)	13		
Red blood cell count decreased			
subjects affected / exposed	9 / 56 (16.07%)		
occurrences (all)	10		
Platelet count decreased			
subjects affected / exposed	7 / 56 (12.50%)		
occurrences (all)	7		
Oxygen saturation decreased			
subjects affected / exposed	11 / 56 (19.64%)		
occurrences (all)	27		
Nuclear magnetic resonance imaging brain abnormal			
subjects affected / exposed	6 / 56 (10.71%)		
occurrences (all)	7		
Neutrophil count increased			
subjects affected / exposed	8 / 56 (14.29%)		
occurrences (all)	9		
Neutrophil count decreased			
subjects affected / exposed	3 / 56 (5.36%)		
occurrences (all)	3		
Heart rate increased			
subjects affected / exposed	15 / 56 (26.79%)		
occurrences (all)	40		
Heart rate decreased			
subjects affected / exposed	15 / 56 (26.79%)		
occurrences (all)	67		
Haemoglobin decreased			
subjects affected / exposed	9 / 56 (16.07%)		
occurrences (all)	10		
Haematocrit decreased			
subjects affected / exposed	8 / 56 (14.29%)		
occurrences (all)	13		
Eosinophil percentage increased			
subjects affected / exposed	6 / 56 (10.71%)		
occurrences (all)	15		

Eosinophil count increased subjects affected / exposed occurrences (all)	12 / 56 (21.43%) 29		
Electrocardiogram QT prolonged subjects affected / exposed occurrences (all)	5 / 56 (8.93%) 7		
Coronavirus test positive subjects affected / exposed occurrences (all)	3 / 56 (5.36%) 3		
Cardiac murmur subjects affected / exposed occurrences (all)	3 / 56 (5.36%) 4		
Carbon dioxide decreased subjects affected / exposed occurrences (all)	9 / 56 (16.07%) 12		
CSF white blood cell count increased subjects affected / exposed occurrences (all)	12 / 56 (21.43%) 37		
CSF test abnormal subjects affected / exposed occurrences (all)	4 / 56 (7.14%) 4		
CSF protein increased subjects affected / exposed occurrences (all)	20 / 56 (35.71%) 56		
CSF neutrophil count increased subjects affected / exposed occurrences (all)	3 / 56 (5.36%) 3		
CSF glucose decreased subjects affected / exposed occurrences (all)	16 / 56 (28.57%) 45		
CSF cell count increased subjects affected / exposed occurrences (all)	13 / 56 (23.21%) 30		
Body temperature decreased subjects affected / exposed occurrences (all)	12 / 56 (21.43%) 24		

Blood uric acid increased subjects affected / exposed occurrences (all)	3 / 56 (5.36%) 3		
Blood triglycerides increased subjects affected / exposed occurrences (all)	13 / 56 (23.21%) 14		
Blood thyroid stimulating hormone increased subjects affected / exposed occurrences (all)	5 / 56 (8.93%) 7		
Blood pressure systolic increased subjects affected / exposed occurrences (all)	14 / 56 (25.00%) 43		
White blood cell count increased subjects affected / exposed occurrences (all)	4 / 56 (7.14%) 4		
Injury, poisoning and procedural complications			
Arthropod bite subjects affected / exposed occurrences (all)	10 / 56 (17.86%) 12

Decreased appetite			
subjects affected / exposed	10 / 56 (17.86%)		
occurrences (all)	12		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 May 2016	The following changes were made as per Amendment 2: 1. Extended the treatment duration in the study to 5 years. 2. Specified the maximum volume of blood collected from a participant by study visit.
28 February 2017	The following changes were made as per Amendment 3: 1. Added the option of same-day administration of IV ELAPRASE and idursulfase-IT for participants who had already completed at least 12 months of idursulfase-IT treatment in studies HGT-HIT-094 or SHP609-302. 2. Additional pharmacokinetic assessments were implemented to measure any increase in total systemic exposure to idursulfase under the same-day administration regime. 3. A new category of AE relatedness, related to IV ELAPRASE and/or idursulfase-IT, was added to facilitate the collection and analysis of AEs observed with same-day administration.
09 October 2018	The following changes were made as per Amendment 4: 1. Extended the duration of treatment from a maximum of 5 years to a maximum of 10 years. 2. A description of the lower and upper levels of the Early Years battery for DAS-II was added. 3. A strategy for data integration was added. 4. Language was added regarding planned subgroup analyses.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
