

## Clinical trial results:

### A Four-Year Open-Label Multi-Center Randomized Two-Arm Study Of Genotropin In Idiopathic Short Stature Patients: Comparing An Individualized, Target-Driven Treatment Regimen To Standard Dosing Of Genotropin

#### Summary

EudraCT number	2014-004172-32
Trial protocol	Outside EU/EEA
Global end of trial date	30 August 2012

#### Results information

Result version number	v1 (current)
This version publication date	27 April 2016
First version publication date	01 August 2015

#### Trial information

##### Trial identification

Sponsor protocol code	A6281280
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00396097
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	08 February 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 August 2012
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

To demonstrate that an individualized, formula-based Genotropin regimen for children with Idiopathic Short Stature (ISS) will lead to a targeted height gain (to reach the target of 10th percentile (%), or - 1.3 Standard Deviation Score (SDS)) during 24 months of treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 December 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	United States: 316
Worldwide total number of subjects	316
EEA total number of subjects	0

Notes:

---

**Subjects enrolled per age group**

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	292
Adolescents (12-17 years)	24
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This was a 4-year, open-label, randomized study conducted at 40 centers across United States of America (USA). The first 2-years of the study constituted core phase and the last 2 years constituted the maintenance phase.

### Pre-assignment

Screening details:

The subjects were randomized in 2:1 manner to formula-based dosing arm and standard dosing arm for initial 2 years of treatment, following which the subjects in formula-based dosing arm were re-randomized in a 1:1 manner to one of two physiological doses, for next 2 years, to identify the minimum genotropin dosage to maintain the growth.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Standard Dose Arm

Arm description:

The subjects received subcutaneous genotropin throughout the four years.

Arm type	Active comparator
Investigational medicinal product name	Genotropin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection in cartridge
Routes of administration	Subcutaneous use

Dosage and administration details:

The subjects received subcutaneous genotropin daily, at maintained standard dose of 0.37 milligram per kilogram per week (mg/kg/week), throughout the four years.

<b>Arm title</b>	Individualized Dose Arm
------------------	-------------------------

Arm description:

The subjects received subcutaneous genotropin daily, at formula-calculated dose for the initial 2 years and then lowered to physiological doses for the remaining 2 years.

Arm type	Active comparator
Investigational medicinal product name	Genotropin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The subjects received subcutaneous genotropin daily, at formula-calculated dose (up to maximum dose of 0.7 mg/kg/week) for the initial 2 years and then lowered to one of two approximately physiological doses (0.18 mg/kg/week or 0.24 mg/kg/week) for the remaining 2 years.

<b>Number of subjects in period 1</b>	Standard Dose Arm	Individualized Dose Arm
Started	114	202
Completed	88	156
Not completed	26	46
Consent withdrawn by subject	17	17
Adverse event, non-fatal	1	5
Not specified	3	5
Insufficient Clinical Response	1	4
Lost to follow-up	4	9
Protocol deviation	-	6

## Baseline characteristics

### Reporting groups

Reporting group title	Standard Dose Arm
-----------------------	-------------------

Reporting group description:

The subjects received subcutaneous genotropin throughout the four years.

Reporting group title	Individualized Dose Arm
-----------------------	-------------------------

Reporting group description:

The subjects received subcutaneous genotropin daily, at formula-calculated dose for the initial 2 years and then lowered to physiological doses for the remaining 2 years.

Reporting group values	Standard Dose Arm	Individualized Dose Arm	Total
Number of subjects	114	202	316
Age, Customized Units: Participants			
<= 7 years	37	70	107
>=7 years	77	132	209
Age Continuous Units: years			
arithmetic mean	8.3	8.4	
standard deviation	± 2.1	± 2.3	-
Gender, Male/Female Units: Participants			
Female	31	58	89
Male	83	144	227

## End points

### End points reporting groups

Reporting group title	Standard Dose Arm
Reporting group description: The subjects received subcutaneous genotropin throughout the four years.	
Reporting group title	Individualized Dose Arm
Reporting group description: The subjects received subcutaneous genotropin daily, at formula-calculated dose for the initial 2 years and then lowered to physiological doses for the remaining 2 years.	
Subject analysis set title	Individualized Dose Arm Overall
Subject analysis set type	Full analysis
Subject analysis set description: The subjects received subcutaneous genotropin daily, at formula-calculated dose (up to maximum dose of 0.7 mg/kg/week) for the initial 2 years and then lowered to one of two approximately physiological doses (0.18 mg/kg/week or 0.24 mg/kg/week) for the remaining 2 years.	
Subject analysis set title	Individualized Dose Arm 0.18 mg/kg/Week
Subject analysis set type	Full analysis
Subject analysis set description: The subjects received subcutaneous genotropin daily, at formula-calculated dose (up to maximum dose of 0.7 mg/kg/week) for the initial 2 years and then lowered to one of two approximately physiological doses 0.18 mg/kg/week for the remaining 2 years.	
Subject analysis set title	Individualized Dose Arm 0.24 mg/kg/Week
Subject analysis set type	Full analysis
Subject analysis set description: The subjects received subcutaneous genotropin daily, at formula-calculated dose (up to maximum dose of 0.7 mg/kg/week) for the initial 2 years and then lowered to one of two approximately physiological doses 0.24 mg/kg/week for the remaining 2 years.	

### Primary: Absolute on-target Difference (AOTD) at 24 Months

End point title	Absolute on-target Difference (AOTD) at 24 Months
End point description: This was defined as an absolute difference between the 24-month height standard deviation score (SDS) and targeted 24-month height SDS (10th percentile (%), or -1.3 SDS). SDS indicates how similar the subjects was to the reference population. These were calculated using 2000 Center for the Disease Control (CDC) growth reference tables (by age and gender). The Full Analysis Set (FAS) included all randomized subjects who received at least 1 dose of study treatment and had at least 1 post-baseline height SDS value available. Last observation carried forward (LOCF) rule was applied to impute Month 24 missing height SDS data.	
End point type	Primary
End point timeframe: 2 years	

End point values	Standard Dose Arm	Individualized Dose Arm		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	202		
Units: Standard Deviation Score (SDS)				
arithmetic mean (standard deviation)	0.603 ( $\pm$ 0.2948)	0.625 ( $\pm$ 0.3003)		

## Statistical analyses

Statistical analysis title	Absolute On-target Difference (AOTD) at 24 Months
Comparison groups	Standard Dose Arm v Individualized Dose Arm
Number of subjects included in analysis	316
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.5762
Method	ANCOVA
Parameter estimate	Mean difference (final values)
Point estimate	-0.006
Confidence interval	
level	Other: 97.5 %
sides	1-sided
lower limit	-0.071
Variability estimate	Standard error of the mean
Dispersion value	0.033

## Secondary: Variability of Height SDS at 24 Months

End point title	Variability of Height SDS at 24 Months
End point description:	
The continuous endpoint of variability of height SDS at 24 months was defined as the SD of the 24 month height SDS. FAS included all randomized subjects who received at least 1 dose of study treatment and had at least 1 post-baseline height SDS value available. LOCF rule was applied to impute Month 24 missing height SDS data.	
End point type	Secondary
End point timeframe:	
2 years	

End point values	Standard Dose Arm	Individualized Dose Arm		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	202		
Units: Standard Deviation Score (SDS)				
arithmetic mean (standard deviation)				
Change from baseline at 24 months (n=101,184)	1.12 ( $\pm$ 0.408)	1.11 ( $\pm$ 0.518)		

Change from baseline at 24 months LOCF (n=114,202)	1.03 ( $\pm$ 0.475)	1.04 ( $\pm$ 0.544)		
-------------------------------------------------------	---------------------	---------------------	--	--

### Statistical analyses

<b>Statistical analysis title</b>	Variability of Height SDS at 24 Months
Comparison groups	Standard Dose Arm v Individualized Dose Arm
Number of subjects included in analysis	316
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.627
Method	ANOVA (Levene's Test)

### Secondary: Time Cost (Months Until greater than or equal to ( $\geq$ ) -2 SDS)

End point title	Time Cost (Months Until greater than or equal to ( $\geq$ ) -2 SDS)
End point description: Time cost was defined as the number of months needed until height SDS was within the normal limit (ie, greater than or equal to ( $\geq$ ) -2 SDS). FAS included all randomized subjects who received at least 1 dose of study treatment and had at least 1 post-baseline height SDS value available.	
End point type	Secondary
End point timeframe: 2 years	

<b>End point values</b>	Standard Dose Arm	Individualized Dose Arm		
Subject group type	Reporting group	Reporting group

Units: Months				
median (confidence interval 95%)	12 (8 to 12)	12 (8 to 12)		

### Statistical analyses

<b>Statistical analysis title</b>	Time Cost (Months Until $\geq$ -2 SDS)
Comparison groups	Standard Dose Arm v Individualized Dose Arm
Number of subjects included in analysis	316
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.8016
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.033

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.802
upper limit	1.33

## Secondary: Computed Cost of Height Gain at 48 Months

End point title	Computed Cost of Height Gain at 48 Months <sup>[1]</sup>
End point description:	
The computed cost of height gain was defined as the amount of drug used relative to the observed height-gain, in terms of milligram per centimeter (mg/cm) , this was calculated at Month 48.	
End point type	Secondary
End point timeframe:	
4 years	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.  
Justification: Data was not collected at the end of study visit for Individual Dose Arm as comparison between the groups was not planned.

End point values	Standard Dose Arm	Individualized Dose Arm Overall	Individualized Dose Arm 0.18 mg/kg/Week	Individualized Dose Arm 0.24 mg/kg/Week
Subject group type	Reporting group	Subject analysis set	Subject analysis set	Subject analysis set
Number of subjects analysed	114	202	91	88
Units: mg/cm				
arithmetic mean (standard deviation)	72.77 (± 17.914)	67.3 (± 24.382)	63.07 (± 21.656)	69.62 (± 21.903)

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

4 years

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as nonserious in another subject, or one subject may have experienced both a serious and nonserious event during the study.

Assessment type	Non-systematic
-----------------	----------------

occurrences (all)	12	9	
Gastrointestinal disorders			

Abdominal discomfort subjects affected / exposed occurrences (all)	2 / 118 (1.69%) 2	10 / 198 (5.05%) 15	
Abdominal pain subjects affected / exposed occurrences (all)	6 / 118 (5.08%) 7	6 / 198 (3.03%) 9	
Abdominal pain upper subjects affected / exposed occurrences (all)	9 / 118 (7.63%) 11	17 / 198 (8.59%) 19	
Diarrhoea subjects affected / exposed occurrences (all)	7 / 118 (5.93%) 7	12 / 198 (6.06%) 12	
Nausea subjects affected / exposed occurrences (all)	5 / 118 (4.24%) 5	11 / 198 (5.56%) 13	
Vomiting subjects affected / exposed occurrences (all)	15 / 118 (12.71%) 20	21 / 198 (10.61%) 30	
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)	8 / 118 (6.78%) 10	26 / 198 (13.13%) 36	
Nasal congestion subjects affected / exposed occurrences (all)	10 / 118 (8.47%) 14	17 / 198 (8.59%) 26	
Oropharyngeal pain subjects affected / exposed occurrences (all)	6 / 118 (5.08%) 11	19 / 198 (9.60%) 26	
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	15 / 118 (12.71%) 24	24 / 198 (12.12%) 33	
Pain in extremity subjects affected / exposed occurrences (all)	14 / 118 (11.86%) 19	17 / 198 (8.59%) 42	
Scoliosis			

subjects affected / exposed occurrences (all)	11 / 118 (9.32%) 11	19 / 198 (9.60%) 20	
Infections and infestations			
Ear infection			
subjects affected / exposed	1 / 118 (0.85%)	11 / 198 (5.56%)	
occurrences (all)	1	17	
Gastroenteritis			
subjects affected / exposed	10 / 118 (8.47%)	11 / 198 (5.56%)	
occurrences (all)	13	18	
Gastroenteritis viral			
subjects affected / exposed	7 / 118 (5.93%)	15 / 198 (7.58%)	
occurrences (all)	7	17	
Influenza			
subjects affected / exposed	16 / 118 (13.56%)	22 / 198 (11.11%)	
occurrences (all)	18	30	
Nasopharyngitis			
subjects affected / exposed	8 / 118 (6.78%)	25 / 198 (12.63%)	
occurrences (all)	25	54	
Otitis externa			
subjects affected / exposed	2 / 118 (1.69%)	10 / 198 (5.05%)	
occurrences (all)	2	13	
Otitis media			
subjects affected / exposed	11 / 118 (9.32%)	23 / 198 (11.62%)	
occurrences (all)	12	29	
Pharyngitis streptococcal			
subjects affected / exposed	15 / 118 (12.71%)	30 / 198 (15.15%)	
occurrences (all)	23	47	
Sinusitis			
subjects affected / exposed	9 / 118 (7.63%)	23 / 198 (11.62%)	
occurrences (all)	20	47	
Upper respiratory tract infection			
subjects affected / exposed	28 / 118 (23.73%)	45 / 198 (22.73%)	
occurrences (all)	52	73	
Viral infection			
subjects affected / exposed	9 / 118 (7.63%)	11 / 198 (5.56%)	
occurrences (all)	11	13	

## **More information**

### **Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? No

---

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

None reported
