

Clinical trial results:

A randomized, parallel-group, double-blind placebo-controlled and open label active-controlled, multi-center study to assess the efficacy and safety of vilaprisan in patients with uterine fibroids

Summary

EudraCT number	2014-004221-41
Trial protocol	SE DE PT NL GB FI AT CZ HU LT BE ES PL IT
Global end of trial date	26 October 2016

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 October 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 October 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the efficacy of vilaprisan in subjects with uterine fibroids compared to placebo.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent form was read by and explained to all subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Norway: 8

Country: Number of subjects enrolled	Lithuania: 10
Country: Number of subjects enrolled	Italy: 13

Worldwide total number of subjects	172
EEA total number of subjects	172

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	172
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study was conducted at 47 study centers in Austria, Belgium, Bulgaria, Czech Republic, Finland, Germany, Hungary, Italy, Lithuania, Netherlands, Norway, Poland, Portugal, Spain, Sweden, and United Kingdom, between 01 June 2015 (first subject first visit) and 26 October 2016 (last subject last visit).

Pre-assignment

Screening details:

Overall, 244 subjects were screened, of them 72 subjects did not complete screening. A total of 172 subjects were randomized, of them 164 subjects received treatment in one of the 7 treatment arms and total 145 subjects completed the study.

Period 1

Period 1 title	Treatment period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The study included both double-blind, placebo-controlled and open label active-controlled parts. A double-blind placebo-controlled design was considered necessary to differentiate drug effects from the natural course of disease and background findings. An active comparator was considered appropriate to examine comparative efficacy and safety.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment A1: 2mg Vilaprisan + 2mg Vilaprisan

Arm description:

Subjects received 2 milligram (mg) oral dose of vilaprisan (BAY1002670) immediate release (IR) tablet once daily for 12 weeks during both the treatment periods 1 (TP1) and 2 (TP2). Treatment period 2 started on the day following the end of treatment period 1.

Arm type	Experimental
Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during both TP1 and TP2.

Arm title	Treatment A2: Placebo + 2mg Vilaprisan
------------------	--

Arm description:

Subjects received placebo matched to 2 mg vilaprisan IR tablet once daily for 12 weeks during TP1; followed by 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP2. Treatment period 2 started on the day following the end of TP1.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matched to 2 mg vilaprisan IR tablet once daily for 12 weeks during TP1.

Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP2.	
Arm title	Treatment B1: 2mg Vilaprisan+1 Bleeding Episode+2mg Vilaprisan
Arm description:	
Subjects received 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP1; followed by 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP2. Treatment period 2 started within the first 3 days of the first bleeding episode following the end of TP1.	
Arm type	Experimental
Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during both TP1 and TP2.	
Arm title	Treatment B2: Placebo + 1 Bleeding Episode + 2mg Vilaprisan
Arm description:	
Subjects received placebo matched to 2 mg vilaprisan IR tablet once daily for 12 weeks during TP1; followed by 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP2. Treatment period 2 started within the first 3 days of the first bleeding episode following the end of TP1.	
Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received placebo matched to 2 mg vilaprisan IR tablet once daily for 12 weeks during TP1.	
Investigational medicinal product name	Vilaprisan
Investigational medicinal product code	BAY1002670
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 2 mg oral dose of vilaprisan IR tablet once daily for 12 weeks during TP2.	
Arm title	Treatment C1:5mg Ulipristal+2 Bleeding Episodes+5mg Ulipristal
Arm description:	
Subjects received 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP1; followed by 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP2. Treatment period 2 started within the first 3 days of the second bleeding episode following the end of TP1.	
Arm type	Experimental
Investigational medicinal product name	Ulipristal
Investigational medicinal product code	
Other name	Esmya 5 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during both TP1 and TP2.

Arm title	Treatment C2: Placebo + 2 Bleeding Episodes + 5mg Ulipristal
------------------	--

Arm description:

Subjects received placebo matched to 5 mg ulipristal IR tablet once daily for 12 weeks during TP1; followed by 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP2. Treatment period 2 started within the first 3 days of the second bleeding episode following the end of TP1.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matched to 5 mg ulipristal IR tablet once daily for 12 weeks during TP1.

Investigational medicinal product name	Ulipristal
Investigational medicinal product code	
Other name	Esmya 5 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP2.

Arm title	Treatment C3: 5mg Ulipristal + 2 Bleeding Episodes + Placebo
------------------	--

Arm description:

Subjects received 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP1; followed by placebo matched to 5 mg ulipristal IR tablet once daily for 12 weeks during TP2. Treatment period 2 started within the first 3 days of the second bleeding episode following the end of TP1.

Arm type	Experimental
Investigational medicinal product name	Ulipristal
Investigational medicinal product code	
Other name	Esmya 5 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 5 mg oral dose of ulipristal IR tablet once daily for 12 weeks during TP1.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matched to 5 mg ulipristal IR tablet once daily for 12 weeks during TP2.

Statistical analyses

Statistical analysis title	Vilaprisan 12 weeks vs Placebo 12 weeks
----------------------------	---

Statistical analysis description:

Amenorrhea (yes or no) was defined as no scheduled or unscheduled bleeding/spotting after end of the initial bleeding episode until the end of the respective treatment period. The amenorrhea rates of vilaprisan vs placebo was analyzed using Fisher's exact tests at a 5% two sided significance level. A hierarchical (fixed sequence) testing procedure was used and 95% confidence intervals were calculated. P-value calculated with respect to Placebo 12 weeks.

Comparison groups	Vilaprisan 12 weeks-B1 (TP1) v Placebo: Pooled A2, B2 and C2 (TP1)
-------------------	--

Number of subjects included in analysis	70
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Fisher's exact tests
Confidence interval	
level	95 %

Statistical analysis title	Vilaprisan 24 weeks vs Placebo 12 weeks
-----------------------------------	---

Statistical analysis description:

Secondary: Time to Onset of Controlled Bleeding

End point title	Time to Onset of Controlled Bleeding
-----------------	--------------------------------------

End point description:

Onset of controlled bleeding was defined based on the menstrual blood loss of all constructed moving evaluation time windows (METW) starting from the first day of treatment up to the end of treatment. Each completed METW was 28 days in length and each incomplete METW was less than 28 days. Onset of controlled bleeding was defined by the first day, for which the menstrual blood loss (MBL) assessed by menstrual pictogram for all subsequent 28-day periods up to the end of the treatment period was less than 80 mL. Kaplan-Meier estimated time to onset of controlled bleeding (days) was calculated and reported. In the below table, '99999' refers to data was not calculated as most subjects did not show controlled bleeding.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 August 2015	After the European Union label of the active reference drug Esmya (ulipristal acetate 5 mg tablets) had been changed, the former labelled indication of short-term use of Esmya before surgical treatment of uterine fibroids was extended to repeated intermittent use. Consequently, the inclusion criterion "Eligible to undergo surgical treatment for uterine fibroids at the end of study treatment" and related protocol sections could be deleted.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Occurrence of "±" in relation with geometric CV is auto-generated and cannot be deleted. Decimal places were automatically truncated if last decimal equals zero.
