General information about the trial

Main objective of the trial:

The main objective of the study was to estimate the bleeding risk with rivaroxaban, compared with acetyl salicylic acid (ASA), in addition to a single antiplatelet P2Y12 inhibitor agent (clopidogrel or ticagrelor), in subjects with a recent acute coronary syndrome (ACS) (including ST-segment elevation myocardial infarction [STEMI] and non-ST-segment elevation acute coronary syndrome [NSTE-ACS]).

Protection of trial subjects:

The safety evaluations included bleeding events, other adverse events, and clinical laboratory tests (hematology and clinical chemistry) that were relevant and clinically meaningful to a serious adverse event (SAE) or endpoint event. Safety data obtained during the study were reviewed on a routine basis by an unblinded, independent data monitoring committee (IDMC). This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 3,145 subjects were screened for eligibility, of these 108 subjects were screening failures and the remaining 3,037 subjects were randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Rivaroxaban 2.5 mg Twice Daily (BID)

Arm description:

Subjects received oral dose of 2.5 milligram (mg) rivaroxaban BID and Acetylsalicylic acid (ASA) placebo once daily (OD) along with either clopidogrel 75 mg OD or ticagrelor 90 mg BID for a minimum of 180 days, and up to 360 days of treatment.

Arm type	Experimental
Investigational medicinal product name	Rivaroxaban
Investigational medicinal product code	BAY59-7939
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received oral dose of 2.5 mg rivaroxaban BID for a minimum of 180 days, and up to 360 days of treatment.

Investigational medicinal product name	ASA Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received oral dose of placebo matching to 100 mg ASA OD along with either clopidogrel 75 mg OD or ticagrelor 90 mg BID for a minimum of 180 days, and up to 360 days of treatment.

Arm title	Acetylsalicylic acid 100 mg Once Daily (OD)
------------------	---

Arm description:

Arm type	Active comparator
Investigational medicinal product name	Rivaroxaban Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received oral dose of placebo matching to 2.5 mg rivaroxaban BID along with either clopidogrel

75 mg OD or ticagrelor 90 mg BID for a minimum of 180 days, and up to 360 days of treatment.

Investigational medicinal product name	Acetylsalicylic acid
Investigational medicinal product code	
Other name	Aspirin
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received oral dose of 100 mg ASA OD for a minimum of 180 days, and up to 360 days of treatment.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: To provide more clarification for the subjects who were treated and to justify safety analysis population, we have created a milestone in subject disposition as "Treated".

Primary: Number of Subjects with non Coronary Artery Bypass Graft-Related (non CABG-related) Thrombolysis in Myocardial Infarction (TIMI) Clinically Significant Bleeding Events

End point title	Number of Subjects with non Coronary Artery Bypass Graft-Related (non CABG-related) Thrombolysis in Myocardial Infarction (TIMI) Clinically Significant Bleeding Events
End point description: Non CABG-related TIMI clinically significant bleeding events are sum of non CABG-related TIMI major bleeding events, TIMI minor bleeding events and TIMI bleeding events requiring medical attention. Major: any symptomatic intracranial bleeding: clinically overt signs of hemorrhage with hemoglobin (Hb) drop of greater than or equal to (\geq)5 gram per deciliter (g/dl) (or absolute drop in hematocrit of $\geq 15\%$) and fatal bleeding (results in death within 7 days); Minor: clinically overt sign of hemorrhage with Hb drop of 3 - <5 g/dl (or drop in hematocrit of 9 - $<15\%$); requiring medical attention: bleeding event that required medical, surgical treatment/laboratory evaluation and did not meet criteria for major/minor bleeding event. Population analyzed included all randomized subjects who had received at least one dose of study drug and had events between randomization and last dose of study drug +2 days or untreated subjects who had events between randomization to 2 days thereafter.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2014	The following changes were made in this amendment: modified a number of the inclusion criteria to simplify enrollment of subjects into the study; changes were made to clarify: the definition of the primary endpoint as it related to TIMI clinically significant bleeding events, stratification, the composition and conduct of the committees, the data to be used in the analyses, and the planned interim analysis; changes were made to ensure the evaluation of the cytochrome P450 2C19 genotype in all subjects regardless of P2Y12 inhibitor choice and to modify the timing of parenteral anticoagulants during the index hospitalization to the first dose of the study agent for consistency with the guidelines and previous studies conducted in the acute coronary syndrome (ACS) population.
21 April 2015	The following changes were made in this amendment: eligibility criteria was revised and it allowed for the inclusion of subjects with non-ST-segment elevation acute coronary syndrome (NSTEMI-ACS) with positive biomarkers of myocardial necrosis without transient electrocardiogram (ECG) changes if there was a culprit lesion on coronary angiography demonstrating that a recent, active intracoronary atherothrombosis was identified; additionally, subjects with unstable angina without elevated cardiac biomarkers were eligible for enrollment based on ECG changes, a revascularization procedure, or an elevated TIMI risk score; furthermore, the adverse event reporting section was updated to exclude events that were suggestive of and reported as endpoint events from serious adverse event reporting and unblinding procedures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study population was homogenous with limited participation of non-Caucasian subjects. Randomization was not performed for use of P2Y12 inhibitor; strata comparisons between bleeding and efficacy endpoints are confounded and were not planned.
