

Clinical trial results:

An open-label extension study to assess the safety and seizure frequency associated with long-term oral lacosamide for uncontrolled primary generalized tonic-clonic seizures in subjects with idiopathic generalized epilepsy
Summary

EudraCT number	2014-004375-23
Trial protocol	Outside EU/EEA
Global end of trial date	25 October 2012

Results information

Result version number	v1 (current)
This version publication date	30 June 2016
First version publication date	04 July 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 December 2012
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	25 October 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objectives of this study were:

- To obtain data on the safety and seizure frequency associated with long-term oral Lacosamide (LCM) for uncontrolled primary generalized tonic-clonic (PGTC) seizures in subjects with idiopathic generalized epilepsy (IGE)
 - To allow subjects who completed SP0961 to continue to receive LCM
-

Protection of trial subjects:

There were no specific protocol measures in place to protect subjects.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	18 August 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	14 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 39
Worldwide total number of subjects	39
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	3

Adults (18-64 years)	36
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study began enrollment in August 2010. The study completed in October 2012. The participant flow consists of the Safety Set (SS).

The Safety Set consists of all subjects that were dosed at least once with Lacosamide (LCM).

Pre-assignment

Screening details:

The participant flow refers to the Safety Set, which consists of all subjects that were dosed at least once with Lacosamide (LCM).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Lacosamide
-----------	------------

Arm description:

Lacosamide was supplied as 50 mg and 100 mg tablets. The starting Lacosamide dose was the same dose reached by a subject at the end of SP0961 (NCT01118949). Lacosamide was administered twice daily (approx. 12 hours apart, once in the morning and once in the evening) in 2 equally divided doses.

Arm type	Experimental
Investigational medicinal product name	Lacosamide
Investigational medicinal product code	Lacosamide LCM
Other name	Vimpat
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Lacosamide was supplied as 50 mg and 100 mg tablets. The starting Lacosamide dose was the same dose reached by a subject at the end of SP0961 (NCT01118949).

Lacosamide was administered twice daily (approx. 12 hours apart, once in the morning and once in the evening) in 2 equally divided doses.

Number of subjects in period 1	Lacosamide
Started	39
Completed	29
Not completed	10
Non-Fatal, Non-Serious AE	1
Consent withdrawn by subject	4
Non-Fatal, Serious AE	1
Pregnancy	1
Non-compliance with Medicinal Product	1
Lack of efficacy	1

Protocol deviation	1
--------------------	---

Baseline characteristics

Reporting groups

Reporting group title	Lacosamide
-----------------------	------------

Reporting group description:

Lacosamide was supplied as 50 mg and 100 mg tablets. The starting Lacosamide dose was the same dose reached by a subject at the end of SP0961 (NCT01118949). Lacosamide was administered twice daily (approx. 12 hours apart, once in the morning and once in the evening) in 2 equally divided doses.

Reporting group values	Lacosamide	Total	
Number of subjects	39	39	
Age Categorical Units: Subjects			
<=18 years	3	3	
Between 18 and 65 years	36	36	
>=65 years	0	0	
Age Continuous Units: years			
arithmetic mean	30.3		
standard deviation	± 10.7	-	
Gender Categorical Units: Subjects			
Female	28	28	
Male	11	11	
Region of Enrollment Units: Subjects			
United States	39	39	
Weight Units: Kilograms			
arithmetic mean	77.66		
standard deviation	± 17.58	-	
Height Units: Centimeters			
arithmetic mean	167.88		
standard deviation	± 8.25	-	

End points

End points reporting groups

Reporting group title	Lacosamide
-----------------------	------------

Reporting group description:

Lacosamide was supplied as 50 mg and 100 mg tablets. The starting Lacosamide dose was the same dose reached by a subject at the end of SP0961 (NCT01118949). Lacosamide was administered twice daily (approx. 12 hours apart, once in the morning and once in the evening) in 2 equally divided doses.

Primary: Number of participants with Treatment-emergent Adverse Events (TEAEs) From Visit 1 to the End of Study (approximately 61 weeks)

End point title	Number of participants with Treatment-emergent Adverse Events (TEAEs) From Visit 1 to the End of Study (approximately 61 weeks) ^[1]
-----------------	--

End point description:

End point type	Primary
----------------	---------

End point timeframe:

From Visit 1 to the end of study (Approximately 61 weeks)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized in tables as descriptive statistics only.

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	39			
Units: participants				
TEAEs	37			

Statistical analyses

No statistical analyses for this end point

Primary: Number of participants withdrawn from the study due to Treatment-emergent Adverse Events (TEAEs) From Visit 1 to the End of Study (approximately 61 weeks)

End point title	Number of participants withdrawn from the study due to Treatment-emergent Adverse Events (TEAEs) From Visit 1 to the End of Study (approximately 61 weeks) ^[2]
-----------------	---

End point description:

End point type	Primary
----------------	---------

End point timeframe:

From Visit 1 to the end of study (Approximately 61 weeks)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized in tables as descriptive statistics only.

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	39			
Units: participants				
Participant withdrawn from study due to TEAE	2			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were collected from August 2010 through October 2012.

Adverse Event reporting consists of the Safety Set (SS). The Safety Set consists of all subjects that were dosed at least once with Lacosamide (LCM).

Assessment type	Non-systematic

Metabolism and nutrition disorders INCREASED APPETITE subjects affected / exposed occurrences (all)	2 / 39 (5.13%) 2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 November 2010	Protocol Amendment 1, dated 02 Nov 2010, provided for the following changes: <ul style="list-style-type: none">- To remove the variable of percent change in PGTC seizure frequency per 28 days from Baseline- To revise withdrawal criteria and follow-up recommendations for abnormal liver function tests (LFTs)- To increase the number of study sites from 10 to 25- To remove the 150mg and 200mg LCM doses of study medication- Minor administrative changes Based on the date of the amendment, 1 subject was enrolled in the study prior to this amendment (Table 1.3.1).
24 August 2011	Protocol Amendment 2, dated 24 Aug 2011, provided for the following changes: <ul style="list-style-type: none">- To add the Columbia-Suicide Severity Rating Scale (C-SSRS) and accompanying necessary revisions- To add the list of anticipated serious adverse events (SAEs)- To change the Sponsor's name to UCB BIOSCIENCES Inc- Minor administrative changes Based on the date of the amendment, an additional 37 subjects were enrolled in the study prior to this amendment (Table 1.3.1).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
