

Clinical trial results:

An open label, multicenter, parallel-group, two-arm study comparing the pharmacokinetics of Keppra XR in children (aged 12-16 years old) with epilepsy and in adults (aged 18-55 years old) with epilepsy

Summary

EudraCT number	2014-004376-39
Trial protocol	Outside EU/EEA
Global end of trial date	16 March 2010

Results information

Result version number	v1 (current)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 May 2010
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 March 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the PK of Keppra XR in children (12 to 16 years old) and adults (18 to 55 years old) with epilepsy.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy:

Concomitant antiepileptic drugs/ vagus nerve stimulation

Evidence for comparator:

Not applicable

Actual start date of recruitment	01 September 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 25
Worldwide total number of subjects	25
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	12
Adults (18-64 years)	13
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Intent-to-treat (ITT) population includes all enrolled patients who received at least one dose of study medication. Pharmacokinetic Per-Protocol (PK-PP) population is a subset of the ITT population, consisting of those patients who had no major protocol deviations affecting the pharmacokinetic parameters.

Pre-assignment

Screening details:

Participant Flow and Baseline characteristics refer to the Intention-to-treat (ITT) population. Two subjects were excluded from the PK-PP due to study medication noncompliance, one due to wrong dosing regimen.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Keppra XR in Children (12-16 years old)

Arm description:

Drug: Keppra XR Keppra XR 500 mg tablets and Keppra XR 750 mg tablets

Dosage: Keppra XR 1000-3000 mg/day taken once daily

Duration: 4-7 days

Arm type	Experimental
Investigational medicinal product name	Levetiracetam
Investigational medicinal product code	Levetiracetam (LEV)
Other name	Keppra
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Keppra XR 500 mg tablets and Keppra XR 750 mg tablets.

Dosage: Keppra XR 1000-3000 mg/day taken once daily.

Arm title	Keppra XR in Adults (18-55 years old)
------------------	---------------------------------------

Arm description:

Drug: Keppra XR Keppra XR 500 mg tablets and Keppra XR 750 mg tablets

Dosage: Keppra XR 1000-3000 mg/day taken once daily

Duration: 4-7 days

Arm type	Experimental
Investigational medicinal product name	Levetiracetam
Investigational medicinal product code	Levetiracetam (LEV)
Other name	Keppra
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Keppra XR 500 mg tablets and Keppra XR 750 mg tablets.

Dosage: Keppra XR 1000-3000 mg/day taken once daily.

Number of subjects in period 1	Keppra XR in Children (12-16 years old)	Keppra XR in Adults (18-55 years old)
Started	12	13
Pharmacokinetic (PK-PP) population	12	10 ^[1]
Completed	12	13

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Two subjects were excluded due to study medication noncompliance, one due to wrong dosing Regimen.

Duration: 4-7 days	

Primary: Maximum Concentration at Steady State (Cmax) of Keppra XR normalized by dose, and by body weight and dose during up to 7 days of administration

End point title	Maximum Concentration at Steady State (Cmax) of Keppra XR normalized by dose, and by body weight and dose during up to 7 days of administration
End point description:	
The Cmax is the maximum plasma concentration normalized by dose and by body weight and dose.	
Cmax normalized by 1000 mg dose was calculated as:	
Cmax/(mg dose taken/ 1000 mg Keppra XR).	
Cmax normalized by body weight and dose (1 mg Keppra XR/kg) was calculated as:	
Cmax/(bodyweight (kg)/ mg dose Keppra XR taken).	
Pharmacokinetic (PK) samples were taken predose and 1h, 2.5h, 4h, 6h and 10h after study medication at day 4, 5, 6 or 7 of Keppra XR administration.	
End point type	Primary
End point timeframe:	
6 pharmacokinetic samples were taken pre-dose, 1, 2.5, 4, 6 and 10 hours after administration, at Day 4, 5, 6, or 7 of Keppra XR administration.	

End point values	Keppra XR in Children (12-16 years old)	Keppra XR in Adults (18-55 years old)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	12	10		
Units: µg/mL				
geometric mean (confidence interval 95%)				
Dose norm. (Keppra XR 1000mg)	17.3 (14.3 to 21)	14.9 (12.1 to 18.5)		
Dose and weight norm. (Keppra XR 1 mg/kg)	1.27 (1.12 to 1.44)	1.24 (1.08 to 1.42)		

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description: An ANOVA for log-transformed values has been used as the basis for calculation of point estimates and Confidence Intervals (CIs). Point estimates for the geometric means ratios children/adults for Cmax normalized by dose and Body weight and 90% CIs have been calculated.	
Comparison groups	Keppra XR in Children (12-16 years old) v Keppra XR in Adults (18-55 years old)
Number of subjects included in analysis	22
Analysis specification	Pre-specified
Analysis type	equivalence
Method	ANOVA
Parameter estimate	Point estimate for ratio
Point estimate	1.0271
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.8817
upper limit	1.1964

Primary: Area Under the Plasma Concentration Curve over a dosing interval of 24 hours (AUCtau) of Keppra XR normalized by dose, and by body weight and dose during up to 7 days of administration

End point title	Area Under the Plasma Concentration Curve over a dosing interval of 24 hours (AUCtau) of Keppra XR normalized by dose, and by body weight and dose during up to 7 days of administration
-----------------	--

End point description:

AUCtau normalized by 1000 mg dose was calculated as:

$AUC_{\tau}/(mg \text{ dose taken} / 1000 \text{ mg Keppra XR})$.

AUCtau normalized by body weight and dose (1 mg Keppra XR/kg) was calculated as:

$AUC_{\tau}/(\text{bodyweight (kg)} / \text{mg dose Keppra XR taken})$.

6 PK samples were taken pre-dose, 1, 2.5, 4, 6 and 10 hours after administration, at Day 4, 5, 6, or 7 of Keppra XR administration. At steady state, reached after 2 days of administration of Keppra XR, the concentrations at 24h postdose is equal to the predose concentration. The predose concentration was used as the 24h concentration to calculate AUCtau.

End point type	Primary
----------------	---------

End point timeframe:

6 pharmacokinetic samples were taken pre-dose, 1, 2.5, 4, 6 and 10 hours after administration, at Day 4, 5, 6, or 7 of Keppra XR administration.

End point values	Keppra XR in Children (12-16 years old)	Keppra XR in Adults (18-55 years old)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Starting Study Drug Treatment (Day 1) to up to 14 days.

Adverse event reporting additional description:

Treatment-Emergent AEs were collected and refer to the Safety Set. Safety Set includes all subjects who took at least one dose of study medication. Treatment emergent means that an Adverse Event has begun or got worse after start of Keppra XR administration.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 May 2009	<p>Protocol Amendment 1 (dated 19 May 2009) was primarily issued to update the Minimum amount of blood to be taken for PK sampling from 1mL to 4mL to ensure that there was enough plasma volume to perform accurate PK analyses. Furthermore, it was clarified that the Final Visit was to take place 7(+3) days after the Evaluation Visit (ie, 7 [+3] days after the final blood sampling) or, if applicable, 7 (+3) days after the Early Discontinuation Visit (EDV) (ie, 7[+3] days after the final administration of Keppra XR).</p> <p>In addition, footnotes in the schedule of study assessments were updated, and clarification was provided regarding the daily record card (DRC), drug accountability, and laboratory measurements.</p> <p>Protocol Amendment 1 was issued prior to any subject being enrolled in N01340 (Listing 13.1).</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
