

Clinical trial results:

An open-label pilot study to assess the safety of oral lacosamide as adjunctive therapy for uncontrolled primary generalized tonic-clonic seizures in subjects with idiopathic generalized epilepsy

Summary

EudraCT number	2014-004379-22
Trial protocol	Outside EU/EEA
Global end of trial date	30 August 2011

Results information

Result version number	v1 (current)
This version publication date	30 June 2016
First version publication date	27 June 2015

Trial information

Trial identification

Sponsor protocol code	SP0961

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 November 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 August 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the safety of Lacosamide (LCM) in subjects with uncontrolled primary generalized tonic-clonic (PGTC) seizures with idiopathic generalized epilepsy (IGE).

Protection of trial subjects:

No specific measures in the protocol to minimize pain and distress.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	17 May 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	14 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 49
Worldwide total number of subjects	49
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	3
Adults (18-64 years)	46
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Safety Set (SS) includes all enrolled subjects who took at least 1 dose of Lacosamide (LCM).

Pre-assignment

Screening details:

Participant Flow and Baseline Characteristics refer to the Safety Set (SS).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Lacosamide
-----------	------------

Arm description:

Lacosamide is supplied as 50 mg, 100 mg, 150 mg, and 200 mg tablets. Subjects will begin a Dose-Titration Phase of Lacosamide at 100 mg/day (50 mg bid, approx. 12 hours apart, once in the morning and once in the evening) for 1 week. Three (3) weekly increases will follow until the subject reaches a dosage of 200 mg/day, 300 mg/day, or 400 mg/day, as deemed clinically appropriate. The final titration will be followed by a 6-week Maintenance Phase. Subjects who complete the Maintenance Phase have the opportunity to enroll in an open-label extension study; those who do not enroll will begin a 3-week End-of-Study Phase when Lacosamide will be tapered off gradually at a recommended rate of 200 mg/day/week.

Arm type	Experimental
Investigational medicinal product name	Lacosamide
Investigational medicinal product code	Lacosamide LCM
Other name	Vimpat
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Lacosamide is supplied as 50 mg, 100 mg, 150 mg, and 200 mg tablets. Subjects will begin a Dose-Titration Phase of Lacosamide at 100 mg/day (50 mg bid, approx. 12 hours apart, once in the morning and once in the evening) for 1 week. Three (3) weekly increases will follow until the subject reaches a dosage of 200 mg/day, 300 mg/day, or 400 mg/day, as deemed clinically appropriate. The final titration will be followed by a 6-week Maintenance Phase. Subjects who complete the Maintenance Phase have the opportunity to enroll in an open-label extension study; those who do not enroll will begin a 3-week End-of-Study Phase when Lacosamide will be tapered off gradually at a recommended rate of 200 mg/day/week.

Number of subjects in period 1	Lacosamide
Started	49
Completed	40
Not completed	9
Consent withdrawn by subject	4
Non-Fatal, Serious AE(s)	1
Non-Fatal, Non-Serious AE(s)	4

Primary: Change in the number of seizure days with absence seizures from the Baseline Phase to the Maintenance Phase

End point title	Change in the number of seizure days with absence seizures from the Baseline Phase to the Maintenance Phase ^[1]
-----------------	--

End point description:

During the study subjects kept a diary to record daily seizure activity from Visit 1 until the end of study participation. The following information has been recorded:

- Seizure type
- Seizure frequency

A negative value in change of seizure days with absence seizures shows a decrease in seizure days with absence seizures.

End point type	Primary
----------------	---------

End point timeframe:

From Baseline Phase (Weeks 0 to 4) to Maintenance Phase (Weeks 8 to 13)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized in tables as descriptive statistics only.

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: number of seizure days				
arithmetic mean (standard deviation)				
mean (standard deviation)	-0.37 (± 4.8)			

Statistical analyses

No statistical analyses for this end point

Primary: Change in the number of seizure days with myoclonic seizures from the Baseline Phase to the Maintenance Phase

End point title	Change in the number of seizure days with myoclonic seizures from the Baseline Phase to the Maintenance Phase ^[2]
-----------------	--

End point description:

During the study subjects kept a diary to record daily seizure activity from Visit 1 until the end of study participation. The following information has been recorded:

- Seizure type
- Seizure frequency

A negative value in change of seizure days with myoclonic seizures shows a decrease in seizure days with myoclonic seizures.

End point type	Primary
----------------	---------

End point timeframe:

From Baseline Phase (Weeks 0 to 4) to Maintenance Phase (Weeks 8 to 13)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized in tables as descriptive statistics only.

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: number of seizure days				
arithmetic mean (standard deviation)				
mean (standard deviation)	-2.19 (\pm 5.8)			

Statistical analyses

No statistical analyses for this end point

Secondary: Changes in count of generalized spike-wave discharges on 24-hour ambulatory electroencephalogram (EEG) from Visit 2 (Baseline Phase) to Visit 6 (Maintenance Phase)

End point title	Changes in count of generalized spike-wave discharges on 24-hour ambulatory electroencephalogram (EEG) from Visit 2 (Baseline Phase) to Visit 6 (Maintenance Phase)
-----------------	---

End point description:

Subjects were asked to return to the clinic on the morning of the day prior to Visit 2 and Visit 6 to begin 24-hour ambulatory EEG recordings for evaluation of spike-wave discharges. Only subjects with an evaluable EEG measurement with > 19 interpretable hours at Visit 2 and Visit 6 are included in this analysis. The general spike-wave discharges are calculated per interpretable hours.

End point type	Secondary
----------------	-----------

End point timeframe:

From Visit 2 (Week 4) to Visit 6 (Week 8)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	40			
Units: 1/hour				
arithmetic mean (standard deviation)				
mean (standard deviation)	-3.47 (\pm 55.85)			

Statistical analyses

No statistical analyses for this end point

Secondary: Changes in count of 3 Hertz (Hz) spike-wave discharges (during waking hours) on 24-hour ambulatory Electroencephalogram (EEG) from Visit 2 (Baseline Phase) to Visit 6 (Maintenance Phase)

End point title	Changes in count of 3 Hertz (Hz) spike-wave discharges (during waking hours) on 24-hour ambulatory Electroencephalogram (EEG) from Visit 2 (Baseline Phase) to Visit 6 (Maintenance Phase)
-----------------	--

End point description:

Subjects were asked to return to the clinic on the morning of the day prior to Visit 2 and Visit 6 to begin 24-hour ambulatory EEG recordings for evaluation of spike-wave discharges. Only subjects with an evaluable EEG measurement with > 19 interpretable hours at Visit 2 and Visit 6 are included in this analysis. The 3 Hertz (Hz) spike-wave discharges are calculated per awake hours.

End point type	Secondary
----------------	-----------

End point timeframe:

From Visit 2 (Week 4) to Visit 6 (Week 8)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	40			
Units: 1/hour				
arithmetic mean (standard deviation)				
mean (standard deviation)	0.13 (± 2.17)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with treatment emergent adverse events (TEAEs) during the 10-week Treatment Period

End point title	Number of subjects with treatment emergent adverse events (TEAEs) during the 10-week Treatment Period
-----------------	---

End point description:

An Adverse Event (AE) is any untoward medical occurrence in a patient or clinical investigation subject administered a pharmaceutical product, which does not necessarily have a causal relationship with this treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

From Visit 2 (Week 4) to Visit 7 (Week 13)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	49			
Units: participants				
TEAEs	43			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects withdrawn from the study due to Treatment Emergent Adverse Events (TEAEs) during the 10-week Treatment Period

End point title	Number of subjects withdrawn from the study due to Treatment Emergent Adverse Events (TEAEs) during the 10-week Treatment Period
-----------------	--

End point description:

An Adverse Event (AE) is any untoward medical occurrence in a patient or clinical investigation subject administered a pharmaceutical product, which does not necessarily have a causal relationship with this treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

From Visit 2 (Week 4) to Visit 7 (Week 13)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	49			
Units: participants				
Subject Withdrawal due to TEAE	5			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were collected up to 16 weeks from Baseline (Week 0 - Week 4) over the 3-weeks Titration Period (Week 4 - Week 7) and the 6-weeks Maintenance Period (Week 7 - Week 13) to the Final Clinic Visit at the end of Week 16.

Adverse event reporting additional description:

Adverse Events refer to the Safety Set (SS). SS includes all enrolled subjects who received at least one dose of Lacosamide.

Assessment type	Non-systematic
