

Clinical trial results:

An Open-label Extension Trial to Determine Safety and Efficacy of Long-term Oral SPM 927 in Patients With Partial Seizures

Summary

EudraCT number	2014-004398-18
Trial protocol	Outside EU/EEA
Global end of trial date	28 October 2009

Results information

Result version number	v1 (current)
This version publication date	30 June 2016
First version publication date	16 May 2015

Trial information

Trial identification

Sponsor protocol code	SP0756
-----------------------	--------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00522275
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 January 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 October 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To obtain information about the safety of Lacosamide (LCM) during long-term exposure
- To obtain data on seizure reduction and the maintenance of efficacy by LCM during long-term exposure
- To allow subjects who had completed an LCM epilepsy study to receive LCM

Protection of trial subjects:

Subject's informed consent was obtained and documented in accordance with local regulations, ICH-GCP requirements, and to the ethical principles that have their origin in the principles of the Declaration of Helsinki.

Prior to obtaining informed consent, information was given in a language and at a level of complexity understandable to the subject in both oral and written form by the investigator or designee. Each subject had the opportunity to discuss the trial and its alternatives with the investigator.

Background therapy:

N/A

Evidence for comparator:

N/A

Actual start date of recruitment	04 October 2004
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 308
Worldwide total number of subjects	308
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	4
Adults (18-64 years)	297
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The SP0756 study began recruitment in October 2004 and concluded in October 2009. Recruitment occurred in the United States.

Pre-assignment

Screening details:

N/A

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Lacosamide
------------------	------------

Arm description:

Up to 800 mg/day lacosamide (flexible dosing)

Arm type	Experimental
Investigational medicinal product name	Lacosamide
Investigational medicinal product code	SPM 927
Other name	Vimpat
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Up to 800 mg/day Lacosamide (flexible dosing).

Number of subjects in period 1	Lacosamide
Started	308
Completed	138
Not completed	170
Other: Site / clinic closed	4
Other: Sponsor request	2
Non-Fatal, Non-Serious AE	25
Other: Subject is pregnant	2
Non-Fatal, Serious AE	8
Other: Subject had surgery for epilepsy	2
Unsatisfactory compliance	11
Other: Subject relocated	2
Subject withdrew consent	16
Other: Subject arrested	1

Fatal, Serious AE	2
Lost to follow-up	8
Other: Subject wants to become pregnant	2
Other: Travel to / from site difficulty	3
Other: Subject ran out of medication	1
Lack of efficacy	80
Protocol deviation	1

Baseline characteristics

Reporting groups

Reporting group title	Lacosamide
-----------------------	------------

Reporting group description:

Up to 800 mg/day lacosamide (flexible dosing)

Reporting group values	Lacosamide	Total	
Number of subjects	308	308	
Age Categorical			
Units: Subjects			
<=18 years	10	10	
Between 18 and 65 years	291	291	
>=65 years	7	7	
Age Continuous			
Units: years			
arithmetic mean	37.7		
standard deviation	± 12.5	-	
Gender categorical			
Units: Subjects			
Female	146	146	
Male	162	162	
Region of Enrollment			
Units: Subjects			
Asian	5	5	
Black	29	29	
White	251	251	
Other/ mixed	23	23	

End points

End points reporting groups

Reporting group title	Lacosamide
Reporting group description:	
Up to 800 mg/day lacosamide (flexible dosing)	

Primary: Number of subjects reporting at least 1 Treatment-Emergent Adverse Event (TEAE) during the treatment period (Maximum 6 years)

End point title	Number of subjects reporting at least 1 Treatment-Emergent Adverse Event (TEAE) during the treatment period (Maximum 6 years) ^[1]
End point description:	
Adverse events are any untoward medical occurrences in a subject administered study treatment, whether or not these events are related to treatment.	
End point type	Primary
End point timeframe:	
During the Treatment Period (Maximum 6 years)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary variables for this study were all aimed at evaluating the long term safety of LCM using descriptive data summaries. Analysis of seizure reduction was considered secondary/ exploratory and was descriptive only. No statistical comparisons were planned based on the nature of the study design (no treatment comparator, open label flexible dosing, etc).

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	308			
Units: subjects				
number	288			

Statistical analyses

No statistical analyses for this end point

Primary: Number of subjects prematurely discontinuing due to a Treatment-Emergent Adverse Event (TEAE) during the treatment period (maximum 6 years)

End point title	Number of subjects prematurely discontinuing due to a Treatment-Emergent Adverse Event (TEAE) during the treatment period (maximum 6 years) ^[2]
End point description:	
Adverse events are any untoward medical occurrences in a subject administered study treatment, whether or not these events are related to treatment.	
End point type	Primary
End point timeframe:	
During the Treatment Period (Maximum 6 years)	

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary variables for this study were all aimed at evaluating the long term safety of LCM using descriptive data summaries. Analysis of seizure reduction was considered secondary/ exploratory and was descriptive only. No statistical comparisons were planned based on the nature of the study design (no treatment comparator, open label flexible dosing, etc).

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	308			
Units: subjects				
number	33			

Statistical analyses

No statistical analyses for this end point

Primary: Number of subjects reporting at least 1 Serious Adverse Event (SAE) during the treatment period (maximum 6 years)

End point title	Number of subjects reporting at least 1 Serious Adverse Event (SAE) during the treatment period (maximum 6 years) ^[3]
-----------------	--

End point description:

Serious adverse events are any untoward serious medical occurrences in a subject administered study treatment, whether or not these events are related to treatment.

End point type	Primary
----------------	---------

End point timeframe:

During the Treatment Period (Maximum 6 years)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary variables for this study were all aimed at evaluating the long term safety of LCM using descriptive data summaries. Analysis of seizure reduction was considered secondary/ exploratory and was descriptive only. No statistical comparisons were planned based on the nature of the study design (no treatment comparator, open label flexible dosing, etc).

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	308			
Units: subjects				
number	71			

Statistical analyses

No statistical analyses for this end point

Secondary: Median percentage change from baseline in 28-day seizure frequency during the treatment period (Maximum 6 years)

End point title	Median percentage change from baseline in 28-day seizure
-----------------	--

End point description:

Negative changes from Baseline indicate an improvement (i.e., a reduction) in 28-day seizure frequency.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (8-week Baseline Period from the parent study SP0754), Treatment Period (Maximum 6 years)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	307			
Units: percentage change				
median (full range (min-max))				
median (full range)	-48.5 (-100 to 567.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of at least 50 % Responders during the treatment period (maximum 6 years)

End point title	Percentage of at least 50 % Responders during the treatment period (maximum 6 years)
-----------------	--

End point description:

At least 50 percent response is based on the percentage reduction in 28-day seizure frequency during the Treatment Period of the open-label extension relative to the Baseline Phase of the prior study.

End point type	Secondary
----------------	-----------

End point timeframe:

Treatment Period (Maximum 6 years)

End point values	Lacosamide			
Subject group type	Reporting group			
Number of subjects analysed	307			
Units: percentage of subjects				
number (not applicable)				
percentage	48.2			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Maximum of 6 years

Assessment type	Non-systematic

Reporting groups

Reporting group title	Lacosamide
-----------------------	------------

Reporting group description:

Up to 800 mg/day lacosamide (flexible dosing)

Serious adverse events	Lacosamide		
Total subjects affected by serious adverse events			
subjects affected / exposed	71 / 308 (23.05%)		
number of deaths (all causes)	2		
number of deaths resulting from adverse events	0		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Testis cancer			
subjects affected / exposed	1 / 308 (0.32%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Basal cell carcinoma			
subjects affected / exposed	1 / 308 (0.32%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Breast cancer			
subjects affected / exposed	1 / 308 (0.32%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Vascular disorders			
Thrombosis			
subjects affected / exposed	1 / 308 (0.32%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Surgical and medical procedures Vagal nerve stimulator implantation subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 1 / 308 (0.32%) 0 / 1 0 / 0		
General disorders and administration site conditions Chest pain subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 5 / 308 (1.62%) 0 / 6 0 / 0		
Asthenia subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 2 / 308 (0.65%) 1 / 2 0 / 0		
Pyrexia subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 1 / 308 (0.32%) 0 / 1 0 / 0		
Immune system disorders Hypersensitivity subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 1 / 308 (0.32%) 0 / 1 0 / 0		
Reproductive system and breast disorders Ovarian cyst subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 2 / 308 (0.65%) 0 / 2 0 / 0		
Priapism subjects affected / exposed occurrences causally related to treatment / all deaths causally related to treatment / all	 1 / 308 (0.32%) 1 / 1 0 / 0		
Respiratory, thoracic and mediastinal disorders			

Pneumothorax			
subjects affected / exposed	2 / 308 (0.65%)		
occurrences causally related to treatment / all	0 / 2		
deaths causally related to treatment / all	0 / 0		
Pulmonary oedema			
subjects affected / exposed	1 / 308 (0.32%)

Bronchitis subjects affected / exposed occurrences (all)	17 / 308 (5.52%) 23		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 April 2005	This amendment provided information regarding an additional study (SP0757) with an iv formulation of LCM in which subjects at selected sites of the SP0756 study were eligible to participate. In addition, the number of subjects allowed to enroll in the prerequisite double-blind study (SP754) was increased, leading to a longer enrollment period for the SP756 study. Therefore, the estimated number of subjects and the duration of this study were increased.
19 May 2006	This amendment provided further specifications concerning the withdrawal criteria regarding cardiac function. Administrative changes were also made.
20 March 2008	This amendment provided information regarding an extension of the study duration by 2 years to ensure that all subjects had access to LCM until it was otherwise (eg, commercially) available.
12 January 2009	This amendment provided additional detail for the procedures to be followed for subjects who discontinued from the study prematurely and for subjects who completed the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
