

Clinical trial results:

A Phase II, multi-center, double-blind, placebo-controlled, parallel-group, dose-response study to assess the safety and efficacy of CDP870/Certolizumab pegol, dosed subcutaneously in patients with active crohn's disease

Summary

EudraCT number	2014-004399-42
Trial protocol	Outside EU/EEA
Global end of trial date	08 November 2007

Results information

Result version number	v2 (current)
This version publication date	24 September 2020
First version publication date	11 June 2015
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Alignment with final posting on ClinicalTrials.gov after NIH review.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 August 2008
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 November 2007
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to estimate the dose response in subjects with active Crohn's Disease (CD), and to evaluate the efficacy of certolizumab pegol in these subjects.

Protection of trial subjects:

Not applicable

Background therapy:

Steroids, immunosuppressants, antibacterial agents, 5-ASA derivatives, antidiarrheal drugs, topical ano-rectal treatments, and laxative drugs/enemas were allowed concomitantly with no change in dosage and administration from the start of the observation period to Week 6.

Evidence for comparator:

Not applicable

Actual start date of recruitment	02 March 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	9 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 94
Worldwide total number of subjects	94
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	6
Adults (18-64 years)	88
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study started to enroll subjects in March 2006 and concluded in November 2007.

Pre-assignment

Screening details:

Participant Flow refers to the Safety Set, including all randomized subjects who received at least one dose of study medication (Placebo or Certolizumab Pegol).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received two subcutaneous (sc) injections of Placebo on Weeks 0 (first dose), 2 and 4.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received two subcutaneous (sc) injections of Placebo on Weeks 0 (first dose), 2 and 4.

Arm title	Certolizumab pegol 200 mg
------------------	---------------------------

Arm description:

Subjects received one subcutaneous (sc) injection of 200 mg CZP and one injection of Placebo to maintain the study blind on Weeks 0 (first dose), 2 and 4.

Arm type	Experimental
Investigational medicinal product name	Certolizumab Pegol
Investigational medicinal product code	CZP
Other name	Cimzia
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects in the CZP 200 mg arm received one subcutaneous (sc) injection of 200 mg CZP and one injection of Placebo to maintain the study blind on Weeks 0 (first dose), 2 and 4.

Subjects in the CZP 400 mg arm received two subcutaneous (sc) injections of 200 mg CZP on Weeks 0 (first dose), 2 and 4.

Arm title	Certolizumab pegol 400 mg
------------------	---------------------------

Arm description:

Subjects received two subcutaneous (sc) injections of 200 mg CZP on Weeks 0 (first dose), 2 and 4.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Certolizumab Pegol
Investigational medicinal product code	CZP
Other name	Cimzia
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects in the CZP 200 mg arm received one subcutaneous (sc) injection of 200 mg CZP and one injection of Placebo to maintain the study blind on Weeks 0 (first dose), 2 and 4.

Subjects in the CZP 400 mg arm received two subcutaneous (sc) injections of 200 mg CZP on Weeks 0 (first dose), 2 and 4.

Number of subjects in period 1	Placebo	Certolizumab pegol 200 mg	Certolizumab pegol 400 mg
Started	32	30	32
Completed	28	29	31
Not completed	4	1	1

Primary: Crohn's Disease Activity Index (CDAI) response (clinical response or remission) at Week 6

End point title	Crohn's Disease Activity Index (CDAI) response (clinical response or remission) at Week 6 ^[1]
End point description:	
CDAI Response is presented as the percentage of subjects with clinical response at Week 6 or remission at Week 6. Clinical response is defined as at least a 100-point decrease from the Week 0 CDAI score, where change = (CDAI score at Week 6) – (CDAI score at Week 0). Remission is defined as a CDAI of ≤ 150 at Week 6.	
End point type	Primary
End point timeframe:	
Baseline, Week 6	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized in tables as descriptive statistics only.

Secondary: Crohn's Disease Activity Index (CDAI) score at Week 2

End point title	Crohn's Disease Activity Index (CDAI) score at Week 2
End point description:	The Crohn's Disease Activity Index (CDAI) is used to quantify the symptoms of subjects with Crohn's Disease. The CDAI score can range from 0-600 (600 indicating the worst disease). It is the sum of 8 subscores, only the summary score is used here. A CDAI score of 150 or less is considered as remission and a score above 450 indicates extremely severe disease. A decrease in CDAI over time indicates improvement in disease activity.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were collected from the time of signing the informed consent through the last Observation (up to 28 weeks).

Adverse event reporting additional description:

Adverse Events refer to the Safety Population, including all randomized subjects who received at least one dose of study medication (Placebo or Certolizumab Pegol).

Assessment type	Non-systematic
