

Clinical trial results:

Effect of ACE-Inhibition on Microvascular Function in Women with Assessed Microvascular Dysfunction and No Obstructive Coronary Artery Disease.

Summary

EudraCT number	2014-004490-17
Trial protocol	DK
Global end of trial date	20 February 2017

Results information

Result version number	v1 (current)
This version publication date	13 May 2021
First version publication date	13 May 2021

Trial information

Trial identification

Sponsor protocol code	72

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 February 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 February 2017
Global end of trial reached?	Yes
Global end of trial date	20 February 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to explore effects of long term treatment with ACE-inhibitor on the microvasculature assessed by coronary flow reserve by transthoracic echocardiography in normotensive patients with microvascular dysfunction (CFR<2.2) and Angina Pectoris but no coronary artery disease

Protection of trial subjects:

Patients who were bothered by potential side effects and did not want to continue in the study were able to withdraw from the study.

If patients could not complete main examination (stress echocardiography with adenosine infusion) due to discomfort we stopped the infusion.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 January 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 63
Worldwide total number of subjects	63
EEA total number of subjects	63

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	42

From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from July 2015 to December 2015

Pre-assignment

Screening details:

A total of 201 patients from the iPOWER cohort met inclusion and exclusion criteria. Further, 138 patients were excluded as per protocol. We included 63 patients. A total of 55 patients completed the study (ACE inhibitor group, 28, and placebo, 27).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Ramipril

Arm description:

Interventional

Arm type	Experimental
Investigational medicinal product name	Ramipril
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Between 2.5 to 10 mg per day (up titrated according to systolic blood pressure)

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Between 2.5 to 10 mg per day (up titrated according to blood pressure)

Number of subjects in period 1	Ramipril	Placebo
Started	32	31
Completed	28	27
Not completed	4	4
Consent withdrawn by subject	2	4
Adverse event, non-fatal	2	-

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

29th of July 2015 to the 28th of April 2016.

Assessment type	Non-systematic
-----------------	----------------

Dictionary used

Dictionary name	No dictionary
-----------------	---------------

Dictionary version	0
--------------------	---

Frequency threshold for reporting non-serious adverse events: 5 %

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: A standard dictionary was not used for collection of adverse events and therefore the reporting does not fit into this reporting system.

Overall, the proportion of participants experiencing an event categorized as either an adverse event, adverse reaction (common side effects) or serious adverse event was not significantly different between treatment groups: 20% vs. 18% ($p = 0.74$), 22% vs. 28% ($p = 0.33$) and 5% vs. 5% ($p = 0.80$), respectively.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
