

Clinical trial results:

Multi-center, Open-label, Uncontrolled Clinical Study of Palivizumab in Japanese Newborns, Infants and Young Children at the Age of 24 Months or Less with Immunocompromised Medical Conditions

Summary

EudraCT number	2014-004491-31
Trial protocol	Outside EU/EEA
Global end of trial date	25 April 2012

Results information

Result version number	v1 (current)
This version publication date	20 April 2016
First version publication date	14 June 2015

Trial information

Trial identification

Sponsor protocol code	M12-420
-----------------------	---------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01466062
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 April 2012
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 April 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate safety, efficacy and pharmacokinetics of palivizumab in children at the age of 24 months or less with immunocompromised medical conditions.

Protection of trial subjects:

Participant's parent or legal guardian read and understood information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 August 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 28
Worldwide total number of subjects	28
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	28
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study included a screening period of 4 weeks.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Palivizumab
------------------	-------------

Arm description:

15 mg/kg at 30-day intervals; at least 4 intramuscular injections up to a maximum of 7 intramuscular injections as appropriate for prophylaxis of respiratory syncytial virus (RSV) during the RSV season.

Arm type	Experimental
Investigational medicinal product name	Palivizumab
Investigational medicinal product code	
Other name	ABT-315, Synagis
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Palivizumab administered by intramuscular injection

Number of subjects in period 1	Palivizumab
Started	28
Completed	26
Not completed	2
Consent withdrawn by subject	1
Adverse event	1

Baseline characteristics

Reporting groups

Reporting group title	Palivizumab
-----------------------	-------------

Reporting group description:

15 mg/kg at 30-day intervals; at least 4 intramuscular injections up to a maximum of 7 intramuscular injections as appropriate for prophylaxis of respiratory syncytial virus (RSV) during the RSV season.

Reporting group values	Palivizumab	Total	
Number of subjects	28	28	
Age categorical			
Units: Subjects			
Age Continuous			
Units: months			
arithmetic mean	14.2		
standard deviation	± 6.2	-	
Gender, Male/Female			
Units: participants			
Female	11	11	
Male	17	17	

End points

End points reporting groups

Reporting group title	Palivizumab
Reporting group description: 15 mg/kg at 30-day intervals; at least 4 intramuscular injections up to a maximum of 7 intramuscular injections as appropriate for prophylaxis of respiratory syncytial virus (RSV) during the RSV season.	

Primary: Serum Palivizumab Trough Concentrations at Day 1, Day 31, and Day 121

End point title	Serum Palivizumab Trough Concentrations at Day 1, Day 31, and Day 121 ^[1]
End point description: Serum trough concentrations of palivizumab were assessed at Screening, at Day 31 (30 days after the 1st dose) and Day 121 (30 days after the 4th dose). N=number of non-missing observations.	
End point type	Primary
End point timeframe: Day 1 (Screening), Day 31, Day 121	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data are summarized for this end point per protocol.

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	28 ^[2]			
Units: µg/mL				
arithmetic mean (standard deviation)				
Day 1 (Screening); n=28	0 (± 0)			
Day 31; n=28	59 (± 12.9)			
Day 121; n=26	91.8 (± 40.6)			

Notes:

[2] - All participants

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants Requiring Hospitalization For Respiratory Syncytial Virus (RSV) Infection

End point title	Percentage of Participants Requiring Hospitalization For Respiratory Syncytial Virus (RSV) Infection
End point description:	
End point type	Secondary
End point timeframe: From the first administration of palivizumab to 30 days after the last administration of palivizumab. Mean (SD) duration of treatment was 183 (37.29) days.	

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	28 ^[3]			
Units: percentage of participants				
number (confidence interval 95%)	0 (0 to 12.3)			

Notes:

[3] - All participants

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants Who Required Treatment for Respiratory Syncytial Virus (RSV) Infection

End point title	Percentage of Participants Who Required Treatment for Respiratory Syncytial Virus (RSV) Infection
-----------------	---

End point description:

Percentage of participants who required any of the investigated treatments (admission in the intensive care unit [ICU], oxygen supplementation, mechanical ventilation, extracorporeal membrane oxygenation, continuous positive airway pressure and other mechanical respiratory support) for disease caused by RSV infection after the initial dose to 30 days after the last dose of the study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first administration of palivizumab to 30 days after the last administration of palivizumab. Mean (SD) duration of treatment was 183 (37.29) days.

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	28 ^[4]			
Units: percentage of participants				
number (confidence interval 95%)				
Intensive-care unit	0 (0 to 12.3)			
Oxygen supplementation	0 (0 to 12.3)			
Mechanical ventilation	0 (0 to 12.3)			
Extracorporeal membrane oxygenation	0 (0 to 12.3)			
Continuous positive airway pressure	0 (0 to 12.3)			
Other mechanical respiratory support	0 (0 to 12.3)			

Notes:

[4] - All participants

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Hospitalization Caused by Respiratory Syncytial Virus (RSV)

Infection

End point title	Duration of Hospitalization Caused by Respiratory Syncytial Virus (RSV) Infection
-----------------	---

End point description:

Number of days of hospitalization caused by RSV infection.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first administration of palivizumab to 30 days after the last administration of palivizumab.

Mean (SD) duration of treatment was 183 (37.29) days.

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[5]			
Units: days				
number (not applicable)				

Notes:

[5] - No subject had RSV infection from first dose of palivizumab to 30 days after administration

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Required Treatment for Respiratory Syncytial Virus (RSV) Infection

End point title	Duration of Required Treatment for Respiratory Syncytial Virus (RSV) Infection
-----------------	--

End point description:

Duration (days) of requirement for any of the investigated treatments (admission in the intensive care unit [ICU], oxygen supplementation, mechanical ventilation, extracorporeal membrane oxygenation, continuous positive airway pressure and other mechanical respiratory support) for disease caused by RSV infection after the initial dose to 30 days after the last dose of the study drug.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first administration of palivizumab to 30 days after the last administration of palivizumab.

Mean (SD) duration of treatment was 183 (37.29) days.

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[6]			
Units: days				
number (not applicable)				

Notes:

[6] - No subject had RSV infection from first dose of palivizumab to 30 days after administration

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Adverse Events (AEs), Serious Adverse Events (SAEs), and Discontinuations Due to AEs

End point title	Number of Participants with Adverse Events (AEs), Serious Adverse Events (SAEs), and Discontinuations Due to AEs
-----------------	--

End point description:

An adverse event (AE) is defined as any untoward medical occurrence in a participant, which does not necessarily have a causal relationship with treatment. If an adverse event meets any of the following criteria, it is considered a serious adverse event (SAE): results in death or is life-threatening, results in admission or prolongation of hospitalization, results in congenital anomaly or persistent or significant disability/incapacity, or is an important medical event requiring medical or surgical intervention to prevent serious outcome. AEs were categorized by severity (mild, moderate, severe) and relationship to treatment (probably, possibly, probably not, not related). Please see Adverse Events section below for more details.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first administration of palivizumab to 100 days after the last administration of palivizumab. Mean (SD) duration of treatment was 183 (37.29) days.

End point values	Palivizumab			
Subject group type	Reporting group			
Number of subjects analysed	28 ^[7]			
Units: participants				
number (not applicable)				
Any AE	27			
Any AE at least "possibly" drug related	0			
Any AE at least "probably not" drug related	7			
Any "severe" AE	2			
Any SAE	7			
Any AE leading to discontinuation of study drug	1			
Any AE leading to death	0			
Death	0

Influenza			
subjects affected / exposed	6 / 28 (21.43%)		
occurrences (all)	7		
Molluscum contagiosum			
subjects affected / exposed	1 / 28 (3.57%)		
occurrences (all)	1		
Nasopharyngitis			
subjects affected / exposed	4 / 28 (14.29%)		
occurrences (all)	4		
Otitis media acute			
subjects affected / exposed	1 / 28 (3.57%)		
occurrences (all)	1		
Otitis media			
subjects affected / exposed	2 / 28 (7.14%)		
occurrences (all)	2		
Pharyngitis			
subjects affected / exposed	3 / 28 (10.71%)		
occurrences (all)	4		

Pseudomonas infection subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Respiratory tract infection subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 2		
Rotavirus infection subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Rhinitis subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Sinusitis subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Tinea cruris subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Tonsillitis subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	7 / 28 (25.00%) 16		
Upper respiratory tract infection bacterial subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Viral infection subjects affected / exposed occurrences (all)	1 / 28 (3.57%) 1		
Metabolism and nutrition disorders Hypoalbuminaemia subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
