

Clinical trial results:

A RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED, PROOF-OF-CONCEPT STUDY TO EVALUATE THE EFFICACY AND SAFETY OF UCB5857 OVER 12 WEEKS IN SUBJECTS WITH PRIMARY SJGREN'S SYNDROME

Summary

EudraCT number	2014-004523-51
Trial protocol	GB ES FR SE GR IT
Global end of trial date	27 September 2017

Results information

Result version number	v1 (current)
This version publication date	13 October 2018
First version publication date	13 October 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 May 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	27 September 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the efficacy on overall disease activity and safety of UCB5857 added to current treatment relative to placebo in subjects with primary Sjögren's Syndrome (pSS).

Protection of trial subjects:

During the conduct of the study all subjects were closely monitored.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	28 October 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	United Kingdom: 9
Worldwide total number of subjects	27
EEA total number of subjects	27

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	18
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll patients in October 2015 and concluded prematurely in September 2017.

Pre-assignment

Screening details:

The Participant Flow refers to the Full Analysis Set (FAS).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Assessor, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received a daily dose of matching placebo for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were administered capsules of matching placebo once daily, for a duration of 12 weeks.

Arm title	UCB5857
------------------	---------

Arm description:

Participants received a daily dose of 45 mg UCB5857 for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	UCB5857
Investigational medicinal product code	UCB5857
Other name	Seletalisib
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects were administered capsules of the investigational medicinal product (IMP) at doses of 5, 10, and 30 milligrams (mg) adding up to a total dose of 45 mg, once daily, for a duration of 12 weeks.

Number of subjects in period 1	Placebo	UCB5857
Started	14	13
Completed	12	8
Not completed	2	5
Adverse event, non-fatal	1	5
Protocol deviation	1	-

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 August 2015	<p>The rationale for this substantial amendment dated 17-Aug-2015 was to consolidate feedback from Competent Authorities in United Kingdom (UK), France, and Spain, resulting in a new core protocol. The country-specific amendments (France Protocol Amendment 0.1 and 0.2 and UK Protocol Amendment 0.2) were incorporated into Global Protocol Amendment 1.</p> <p>In addition, the Spanish Competent Authority recommended the inclusion of electrocardiogram (ECG) assessments within the study design; this was also implemented within Global Protocol Amendment 1.</p>
04 March 2016	<p>The protocol dated 04-Mar-2016 was amended to provide further information regarding prohibited P-glycoprotein substrate (PGP) inhibitors. Rather than specify "strong" inhibitors, all known inhibitors were excluded until further information was obtained regarding UCB5857's PGP substrate status. To facilitate identification of known PGP inhibitors, a sample, but nonexhaustive, list of PGP inhibitors was added as a table to the protocol. In addition, the definition of the Pharmacokinetic Set (PKS) was amended to correct an error.</p> <p>Previously the PK Set was incorrectly defined as a subset of the Full Analysis Set (FAS) when it should have been a subset of the Safety Set where subjects were assigned to the actual treatment received rather than their randomized treatment.</p>
24 July 2016	<p>The protocol dated 24-Jul-2016 was amended as an urgent safety measure to include potential drug-induced liver injury (PDILI)-related exclusion criteria, withdrawal criteria, and guidance for the management of such cases. Cases of elevated alanine aminotransferase (ALT) and aspartate aminotransferase (AST) had been observed in 3 subjects receiving UCB5857 in ongoing studies, including 2 subjects in SS0004, and 1 subject in APD001 (open-label study of UCB5857 in subjects with activated phosphoinositide 3 kinase [PI3K] delta syndrome). All available blinded clinical data for these cases were medically assessed and in addition, all available data from other subjects in these ongoing studies were reviewed to identify any other potential cases of interest, but no other clinically relevant elevations in aminotransferases or other hepatobiliary laboratory values were noted. UCB considered that from the currently available information, there was a possible causal association of UCB5857 with increased aminotransferases. Consequently, additional risk minimization and pharmacovigilance measures were implemented in the protocol in order to safeguard study subjects against any possible liver injury caused by UCB5857.</p> <p>Additionally, and unrelated to the main purpose of the amendment, further guidance was provided on suspected transmission of an infectious agent via a medicinal product in alignment with UCB's updated procedures.</p>
05 April 2017	<p>The rationale for this substantial protocol amendment dated 05-Apr-2017 was to modify the restriction regarding PGP inhibitors and remove the table of PGP inhibitors from the protocol based on newly available nonclinical data. In addition, procedures for assessment and management of Tuberculosis (TB) were added in order to comply with the UCB policy applied to all UCB-Sponsored studies (excluding noninterventional studies) that included subjects with immunological diseases, who were at increased risk of TB infection either associated with the investigational drug, underlying disease, concomitant treatments, or other medical or sociological factors. Updates to the interim analysis section were made to include text stating that an interim analysis for futility may be performed.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
27 September 2017	After reviewing the feasibility and projected completion date, the Sponsor has made the decision to stop the study early. The interim analysis which was conducted per protocol indicated that the study was not futile and the safety profile of seletalisib has not changed.	-

Notes:

Limitations and caveats
