

Clinical trial results:

A Multi-Center, Randomized, Double-blind, Placebo-controlled Study of Adalimumab for the Maintenance of Clinical Remission in Japanese Subjects with Crohn's Disease

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Summary

EudraCT number	2014-004531-39
Trial protocol	Outside EU/EEA
Global end of trial date	26 November 2010

Results information

Result version number	v2 (current)
This version publication date	17 June 2016
First version publication date	13 June 2015
Version creation reason	• Correction of full data set potential timestamp issues

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 November 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 November 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy and safety of adalimumab for the maintenance of clinical remission in Japanese subjects with Crohn's disease (CD).

Protection of trial subjects:

Prior to any study-related screening procedures being performed on the subject, the informed consent statement was reviewed and signed and dated by the subject and/or parent or legal guardian (if the subject was < 20 years old) and the person who administered the informed consent. If clinical trial support staff gave additional explanations, he/she also signed and date the informed consent statement.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 March 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Japan: 83
Worldwide total number of subjects	83
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	2
Adults (18-64 years)	81
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

All participants who completed lead-in adalimumab induction therapy study (M04-729 [NCT00445939]) were eligible.

Pre-assignment

Screening details:

Participants who rolled over into this study received either double-blind (DB) treatment (adalimumab or placebo; responders (decrease in Crohn's Disease Activity Index [CDAI] ≥ 70 points from lead-in baseline score [CR-70 response] by Week 4 of M14-729) or open-label (OL) treatment (adalimumab; non-responders by Week 4 of M14-729).

Period 1

Period 1 title	Through Week 52 of NCT00445432 (M06-837)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

Participants who had CR-70 response at Week 4 of the induction study (study M04-729 [NCT00445939]) were randomized into 1 of 2 treatment groups (DB adalimumab 40 mg every other week or DB adalimumab placebo every other week) using 2 stratification factors - CDAI category (CDAI less than 150 and CDAI 150 or higher) and presence/absence of fistula at Week 0 of this study.

Arms

Are arms mutually exclusive?	Yes
Arm title	DB Adalimumab 40 mg Eow

Arm description:

Double-blind adalimumab 40 mg every other week

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira, D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of 40 mg adalimumab (0.8 mL/injection) every other week (eow)

Arm title	OL Adalimumab 40 mg Eow
------------------	-------------------------

Arm description:

Open-label adalimumab 40 mg every other week (eow)

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira, D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of 40 mg adalimumab (0.8 mL/injection) every other week (eow)

Arm title	DB Placebo Eow
------------------	----------------

Arm description:

Double-blind adalimumab placebo every other week (eow)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	placebo
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of placebo (0.8 mL/injection) every other week (eow)

Number of subjects in period 1^[1]	DB Adalimumab 40 mg Eow	OL Adalimumab 40 mg Eow	DB Placebo Eow
Started	25	32	25
Completed	10	21	2
Not completed	15	11	23
Consent withdrawn by subject	-	2	-
Not specified	-	2	1
Adverse event	1	7	2
Moved to open-label	14	-	20

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Any Adalimumab includes all subjects who had at least one dose of adalimumab during study M06-837: 32 subjects were randomized to receive OL adalimumab, 25 subjects were randomized to DB adalimumab, and 24 subjects were randomized to receive DB placebo and switched to OL adalimumab (3 subjects discontinued while receiving DB placebo and never received any adalimumab).

Period 2

Period 2 title	148 Weeks of Adalimumab Treatment
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Any Adalimumab
------------------	----------------

Arm description:

All participants in NCT00445432 (Study M06-837) who received at least 1 dose of adalimumab 40 mg every other week (double-blind or open-label).

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira, D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection of 40 mg adalimumab (0.8 mL/injection) every other week (eow)

Number of subjects in period 2^[2]	Any Adalimumab
Started	32
Completed	35
Not completed	44
Consent withdrawn by subject	3
Not specified	9
Adverse event	32
Joined	47
Randomized to DB placebo-switched to OL adalimumab	22
Randomized to DB adalimumab	25

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One subject was randomized but did not receive study drug; the subject was excluded from efficacy analyses.

End points

End points reporting groups

Reporting group title	DB Adalimumab 40 mg Eow
Reporting group description: Double-blind adalimumab 40 mg every other week	
Reporting group title	OL Adalimumab 40 mg Eow
Reporting group description: Open-label adalimumab 40 mg every other week (eow)	
Reporting group title	DB Placebo Eow
Reporting group description: Double-blind adalimumab placebo every other week (eow)	
Reporting group title	Any Adalimumab
Reporting group description: All participants in NCT00445432 (Study M06-837) who received at least 1 dose of adalimumab 40 mg every other week (double-blind or open-label).	

Primary: Number of Participants Who Had Clinical Remission at Week 52 of Double-blind Treatment

End point title	Number of Participants Who Had Clinical Remission at Week 52 of Double-blind Treatment ^{[1][2]}
End point description: Clinical remission=Crohn's Disease Activity Index (CDAI) < 150; number of soft stools, abdominal pain, general well-being, presence of 6 signs (arthritis/arthralgia; iritis/uveitis; erythema nodosum/pyoderma gangrenosum/aphthous stomatitis; fissure, abscess, anal fistula; other cutaneous fistula; fever over 100 degrees), taking medication for diarrhea, abdominal mass, hematocrit, and weight loss are documented during 1-week assessment period. CDAI total score is ≥ 0 and without upper limit. Low score=less severe CD activity. Decrease indicates improvement. Modified Full Analysis Set (mFAS), defined as participants who had received adalimumab (not placebo) during the adalimumab induction study and who received at least 1 dose of DB study drug during this study. Nonresponder imputation (NRI) (clinical remission not achieved) was used for missing data.	
End point type	Primary
End point timeframe: Week 52 of double-blind treatment	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data are summarized for this end point per protocol.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The primary efficacy end point was assessed only in subjects receiving double-blind treatment.

End point values	DB Adalimumab 40 mg Eow	DB Placebo Eow

End point title	Change in Inflammatory Bowel Disease Questionnaire (IBDQ) From Baseline of Lead-in Study (NCT00445939) to Week 52 of Double-blind Treatment ^[6]
-----------------	--

End point description:

IBDQ is a validated disease-specific instrument that assesses the impact of IBD on patient quality of life during a 2-week recall period. It has 32 questions about bowel function and related symptoms, and their social and emotional impact. For each item, participants select 1 of 7 responses. 1=poor quality of life (e.g., feeling of fatigue "all of the time") and 7=good quality (e.g., feeling of fatigue "none of the time"). Scoring range = 32 to 224. Higher scores indicate better quality of life; increases in IBDQ = improved overall quality of life. Modified Full Analysis Set (mFAS), defined as participants who had received adalimumab (not placebo) during the adalimumab induction study and who received at least 1 dose of DB study drug during this study. -----------------	--

End point description:

Crohn's Disease Activity Index (CDAI) documents number of soft stools, abdominal pain, general well-being, presence of 6 signs (arthritis/arthralgia; iritis/uveitis; erythema nodosum/pyoderma gangrenosum/apthous stomatitis; fissure, abscess, anal fistula; other cutaneous fistula; fever over 100 degrees), taking medication for diarrhea, abdominal mass, hematocrit, and weight loss during a 1-week assessment period. CDAI has a total score ≥ 0 and without upper limit. Low score=less severe CD activity. Decrease in score indicates improvement. Data is reported as observed cases. No imputation technique was used.

End point type	Other pre-specified

End point title	Change in International Organization for the Study of Inflammatory Bowel Disease (IOIBD) Score from Baseline of Lead-in Study (NCT00445939) to Week 148
-----------------	---

End point description:

The International Organization for the Study of Inflammatory Bowel Disease (IOIBD) score is an indicator of the activity of Crohn's disease. It measures absence (score of 0) or presence (score of 1) of abdominal pain, diarrhea or bloody stools more than 6 times per day, anal lesion, anal fistula, other complication, abdominal mass, weight loss, fever above 38 degrees Centigrade, abdominal tenderness, and blood pigment below 10 g/dL. Total possible score=0 to 10; low score=less disease activity. Decrease in score indicates alleviation of the disease; increase indicates aggravation of disease. Data is reported as observed cases. No imputation technique was used.

End point type	Other pre-specified

Other pre-specified: Change in Inflammatory Bowel Disease Questionnaire (IBDQ) from Baseline of Lead-in Study (NCT00445939) to Week 148

End point title	Change in Inflammatory Bowel Disease Questionnaire (IBDQ) from Baseline of Lead-in Study (NCT00445939) to Week 148
-----------------	--

End point description:

IBDQ is a validated disease-specific instrument that assesses the impact of IBD on patient quality of life during a 2-week recall period with 32 questions about bowel function and related symptoms & their social/emotional impact. Per item, participants select 1 of 7 responses (1=poor quality of life [e.g., feeling of fatigue "all of the time"]; 7=good quality [e.g., feeling of fatigue "none of the time"]). Scoring range=32 to 224. Higher scores indicate better quality of life; increases in IBDQ=improved overall quality of life. Data is reported as observed cases. No imputation technique was used.

Other pre-specified: Change in Physical Component of the Short Form-36 Health Survey from Baseline of the Lead-in Study (NCT00445939) to Week 148

End point title	Change in Physical Component of the Short Form-36 Health Survey from Baseline of the Lead-in Study (NCT00445939) to Week 148
-----------------	--

End point description:

The Short Form-36 (SF-36) Health Survey is a comprehensive quality of life scale. An increase in SF-36 score indicates alleviation of the disease and a decrease in score indicates aggravation of disease. The physical component reflects activity level, activity limitations, pain, and rating of one's health. Score on the physical component ranges from 0 to 100, with 0=Poorest Health and 100=Best Health. Data is reported as observed cases. No imputation technique was used.

End point type	Other pre-specified

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 March 2007	Allowed to taper and discontinue the concomitant medication, and dose escalation of the concomitant medication after the flare for the subjects with open-label adalimumab treatment after Week 12 of Study M06-837.
09 June 2008	Allowed to have self-injection after Week 52 of Study M06-837.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
