

Clinical trial results:

Prospective, single-blind, placebo-controlled, three-treatment, three-period, adaptive multi-centre Phase IIa (proof-of-concept) trial to investigate the efficacy, safety, and tolerability of Ketamine HCl PR tablets in patients with chronic non-malignant neuropathic pain

Summary

EudraCT number	2014-004535-40
Trial protocol	HU DE
Global end of trial date	31 January 2017

Results information

Result version number	v1 (current)
This version publication date	10 April 2020
First version publication date	10 April 2020

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 August 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 June 2016
Global end of trial reached?	Yes
Global end of trial date	31 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the effect of Ketamine HCl PR tablets administered twice daily as add-on therapy to the individual standard treatment regimen of each patient in comparison to placebo in the relief of chronic non-malignant neuropathic pain as determined by absolute changes in the "current" pain intensity (PI) score on the visual analogue scale (VAS)

Protection of trial subjects:

Due to the prolonged release formulation used in this study the risks and frequencies of adverse reactions were expected to be remarkably lower and with milder severities as compared to formulations for injection. These risks were further minimised by regular contact between the patient and investigator and by close safety monitoring.

Background therapy:

The patients continued their previous individual standard medication and regimen for the treatment of pain.

Evidence for comparator: -

Actual start date of recruitment	08 May 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 54
Worldwide total number of subjects	54
EEA total number of subjects	54

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	43

From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients ≥ 18 years of age with a documented history of chronic non-malignant neuropathic pain and with inadequate pain control

Pre-assignment

Screening details:

A total of 70 subjects were screened. 16 subjects were screening failures.

Pre-assignment period milestones

Number of subjects started	70 ^[1]
Number of subjects completed	54

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 1
Reason: Number of subjects	Other: 15

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number enrolled in the trial is the number of subjects assigned to treatment.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Overall - Low

Arm description:

Individual standard treatment of pain plus Ketamine HCl PR twice daily

Arm type	Experimental
Investigational medicinal product name	Ketamine HCl PR
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Prolonged-release tablet
Routes of administration	Oral use

Dosage and administration details:

Period 1: Ketamine HCl PR Placebo tablets, one tablet twice daily

Period 2 : Ketamine HCl 40 mg PR tablets, one tablet twice daily (TDD: 80 mg)

Period 3: Ketamine HCl 80 mg PR tablets, one tablet twice daily (TDD: 160 mg)

Arm title	Overall - High
------------------	----------------
