Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 February 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the efficacy of switching adult subjects with treatment-resistant depression (TRD) from a prior antidepressant treatment (to which they had not responded) to intranasal esketamine (56 milligram [mg] or 84 mg) plus a newly initiated oral antidepressant, compared with switching to a newly initiated oral antidepressant (active comparator) plus intranasal placebo, in improving depressive symptoms, as assessed by the change from baseline in the Montgomery-Asberg Depression Rating Scale (MADRS) total score from Day 1 (pre-randomization) to the end of the 4-week double-blind induction phase.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety evaluations included monitoring of adverse events (AEs), clinical laboratory tests (hematology, serum chemistry, and urinalysis), vital signs (temperature, pulse/heart rate, respiratory rate, blood pressure [BP]), physical examinations (height, body weight, and neck circumference), electrocardiograms (ECG's), pulse oximetry, nasal examinations and nasal symptom questionnaire, columbia-suicide severity rating scale (C-SSRS), clinician administered dissociative states scale (CADSS), four-item positive symptom subscale of the brief psychiatric rating scale (BPRS+), modified observer's assessment of alertness/sedation (MOAA/S), clinical global assessment of discharge readiness (CGADR), physician withdrawal checklist; 20-item (PWC-20), bladder pain/ interstitial cystitis symptom score (BPIC-SS), computerized cognitive battery, hopkins verbal learning test revised (HVLt-R), university of pennsylvania smell identification test (UPSIT), and smell threshold test.

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 30
Country: Number of subjects enrolled	Brazil: 57
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	Estonia: 10
Country: Number of subjects enrolled	France: 31
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Mexico: 45
Country: Number of subjects enrolled	Slovakia: 10
Country: Number of subjects enrolled	United States: 137

Worldwide total number of subjects	346
EEA total number of subjects	87

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	346
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 346 subjects with treatment-resistant depression (TRD) were randomly assigned to receive treatment- intranasal esketamine (Esk) 56 mg+oral AD (117 subjects), intranasal Esk 84 mg+oral AD (116 subjects), or oral AD+intranasal placebo (113 subjects), out of which 111, 97 and 107 subjects completed the double-blind phase respectively.

Period 1

Period 1 title	Double-blind Induction Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Intranasal Esketamine 56 mg Plus Oral Antidepressant

Arm description:

Subjects self-administered 56 mg of intranasal esketamine (Esk) twice per week for 4 weeks in double-blind (DB) induction phase. Also, subjects simultaneously initiated new oral antidepressant (AD) with one of following: duloxetine (60 milligram [mg]/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal Esk 56 mg+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.

Arm type	Experimental
Investigational medicinal product name	Esketamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

Subjects self-administered 56 mg of esketamine, twice per week for 4 Weeks in double-blind induction phase.

Investigational medicinal product name	Duloxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received duloxetine 60 mg/day daily during Weeks 1 to 4 in double-blind induction phase. Subjects that have in the past shown increased sensitivity towards SSRIs/SNRIs could be started on a 30 mg dose and uptitrated into the therapeutic range of 60 mg by the start of Week 2.

Investigational medicinal product name	Escitalopram
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received escitalopram 10 mg/day during Week 1 and 20 mg/day during Weeks 2 to 4 daily in double-blind induction phase.

Investigational medicinal product name	Venlafaxine XR
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received venlafaxine extended release (XR) 75 mg/day during Week 1, 150 mg/day during Week 2, 225 mg/day during Weeks 3 and 4 daily in double-blind induction phase.

Investigational medicinal product name	Sertraline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received sertraline 50 mg/day during Week 1, 100 mg/day during Week 2, 150 mg/day during Week 3 and 200 mg/day during Week 4 daily in double-blind induction phase.

Arm title	Intranasal Esketamine 84 mg Plus Oral AD
------------------	--

Arm description:

Subjects self-administered 56 mg of intranasal esketamine on Day 1 and then 84 mg from Day 4 onwards twice per week for 4 Weeks in DB induction phase. Also, subjects simultaneously initiated new oral AD with one of following: duloxetine (60 mg/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal Esk 84 mg+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.

Arm type	Experimental
Investigational medicinal product name	Esketamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

Subjects self-administered 56 mg of esketamine on Day 1 and then 84 mg of esketamine from Day 4 onwards, twice per week for 4 Weeks in double-blind induction phase.

Investigational medicinal product name	Duloxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received duloxetine 60 mg/day daily during Weeks 1 to 4 in double-blind induction phase. Subjects that have in the past shown increased sensitivity towards selective serotonin reuptake inhibitors (SSRI)/serotonin and norepinephrine reuptake inhibitors (SNRI) could be started on a 30 mg dose and uptitrated into the therapeutic range of 60 mg by the start of Week 2.

Investigational medicinal product name	Escitalopram
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received escitalopram 10 mg/day during Week 1 and 20 mg/day during Weeks 2 to 4 daily in double-blind induction phase.

Investigational medicinal product name	Sertraline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received sertraline 50 mg/day during Week 1, 100 mg/day during Week 2, 150 mg/day during Week 3 and 200 mg/day during Week 4 daily in double-blind induction phase.

Investigational medicinal product name	Venlafaxine XR
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received venlafaxine XR 75 mg/day during Week 1, 150 mg/day during Week 2, 225 mg/day during Weeks 3 and 4 daily in double-blind induction phase.

Arm title	Oral AD Plus Intranasal Placebo
------------------	---------------------------------

Arm description:

Subjects self-administered intranasal matching placebo, twice per week for 4 weeks in DB induction phase. Also, subjects simultaneously initiated new oral AD with one of following: duloxetine (60 mg/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal placebo+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

Subjects self-administered matching placebo twice per week for 4 Weeks in double-blind Induction Phase.

Investigational medicinal product name	Duloxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received duloxetine 60 mg/day daily during Weeks 1 to 4 in double-blind induction phase. Subjects that have in the past shown increased sensitivity towards SSRIs/SNRIs could be started on a 30 mg dose and uptitrated into the therapeutic range of 60 mg by the start of Week 2.

Investigational medicinal product name	Escitalopram
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received escitalopram 10 mg/day during Week 1 and 20 mg/day during Weeks 2 to 4 daily in double-blind induction phase.

Investigational medicinal product name	Sertraline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received sertraline 50 mg/day during Week 1, 100 mg/day during Week 2, 150 mg/day during Week 3 and 200 mg/day during Week 4 daily in double-blind induction phase.

Investigational medicinal product name	Venlafaxine XR
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received venlafaxine XR 75 mg/day during Week 1, 150 mg/day during Week 2, 225 mg/day during Weeks 3 and 4 daily in double-blind induction phase.

Protocol deviation	-	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects in follow-up phase included subjects who were not eligible or who chose to not participate in the maintenance of effect study(ESKETINTRD3003) and therefore number of subjects starting the period is not consistent with the number completing the preceding period.

-----------------------	--

Reporting group description:

Subjects self-administered 56 mg of intranasal esketamine (Esk) twice per week for 4 weeks in double-blind (DB) induction phase. Also, subjects simultaneously initiated new oral antidepressant (AD) with one of following: duloxetine (60 milligram [mg]/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal Esk 56 mg+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.

Reporting group title	Intranasal Esketamine 84 mg Plus Oral AD
-----------------------	--

Reporting group description:

Subjects self-administered 56 mg of intranasal esketamine on Day 1 and then 84 mg from Day 4 onwards twice per week for 4 Weeks in DB induction phase. Also, subjects simultaneously initiated new oral AD with one of following: duloxetine (60 mg/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal Esk 84 mg+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.

Reporting group title	Oral AD Plus Intranasal Placebo
Reporting group description:	
Subjects self-administered intranasal matching placebo, twice per week for 4 weeks in DB induction phase. Also, subjects simultaneously initiated new oral AD with one of following: duloxetine (60 mg/day- Weeks 1, 2, 3 and 4), escitalopram (10 mg/day- Week 1 and 20 mg/day- Weeks 2 to 4 with minimum therapeutic dose [MTD] of 10 mg/day), sertraline (50 mg/day- Week 1, 100 mg/day- Week 2, 150 mg/day- Week 3 and 200 mg/day- Week 4 with MTD of 50 mg/day) or venlafaxine XR (75 mg/day- Week 1, 150 mg/day- Week 2, 225 mg/day- Weeks 3 and 4 with MTD of 150 mg/day) on Day 1 taken daily in DB induction phase. Subjects who were not eligible or chose to not participate in maintenance of effect study (ESKETINTRD3003) and had received at least 1 dose of intranasal placebo+ Oral AD in DB induction phase were followed in posttreatment follow-up phase for up to 24 weeks to assess safety and tolerability including withdrawal symptoms of study drug.	

Primary: Change From Baseline in Montgomery-Asberg Depression Rating Scale (MADRS) Total Score up to Endpoint Double-blind Induction Phase (Day 28)

End point title	Change From Baseline in Montgomery-Asberg Depression Rating Scale (MADRS) Total Score up to Endpoint Double-blind Induction Phase (Day 28)
End point description:	
MADRS is clinician-rated scale designed to measure depression severity, and to detect changes due to antidepressant treatment. Scale consists of 10 items (apparent sadness, reported sadness, inner tension, sleep, appetite, concentration, lassitude, interest level, pessimistic thoughts, and suicidal thoughts), each of which is scored from 0 (item is not present or is normal) to 6 (severe or continuous presence of symptoms), for total possible score of 0 to 60. Higher scores represent more severe condition. Full analysis set (FAS): all randomized subjects who received at least 1 dose of intranasal study medication and 1 dose of oral antidepressant medication during double-blind induction phase. Here 'N' (number of subjects analysed) signifies number of subjects who were evaluable for this endpoint. Missing data was imputed using Last Observation Carried Forward (LOCF) method and last post baseline observation during phase was carried forward as "End Point (Day 28 LOCF)" for that phase.

Secondary: Percentage of Subjects with Onset of Clinical Response by Day 2 and Day 8

End point title	Percentage of Subjects with Onset of Clinical Response by Day 2 and Day 8
-----------------	---

End point description:

A subject was defined as having a clinical response if there was at least 50% improvement (decrease) from baseline in the MADRS total score with onset by Day 2 and Day 8 that was maintained to Day 28. Subjects were allowed one excursion (non-response) on Days 8, 15 or 22, however the score must show at least 25% improvement. Subjects who did not meet these criteria, or discontinued during the study before Day 28 were considered as non-responders and were assigned the value of 0 (that is no). FAS: all randomized subjects who received at least 1 dose of intranasal study medication and 1 dose of oral antidepressant medication during the double-blind induction phase.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 January 2016	Amendment INT-1 included following changes: Revised exclusion criteria; revised inclusion criteria; removal of prohibition of concomitant medications that prolonged the QT interval/corrected QT (QTc); indicated that the severity of a subject's depressive symptoms was also being confirmed using a Site Independent Qualification Assessment (SIQA), and the required Week 1 Montgomery-Asberg depression rating scale (MADRS) total score was added; allowed option to start at a 30 milligram (mg) dose of duloxetine in the oral antidepressant titration schedule for subjects who had increased sensitivity towards selective serotonin reuptake inhibitors (SSRI)/serotonin and norepinephrine reuptake inhibitors (SNRI); addition of an additional sheehan disability scale (SDS) assessment on Day 15 (Week 2) of the double-blind induction phase; addition of discontinuation criteria related to electrocardiogram (ECG) readings; provided the criterion for non-response at the end of the screening/prospective observational phase; clarification on the (1) mandatory use of oral antidepressant dosing titration schedule, (2) guidance on BP monitoring on intranasal treatment session days, (3) use of prestudy and concomitant therapies, (3) language regarding mandatory discontinuation of subjects who developed treatment emergent ulcerative cystitis, (4) medication(s) that were used for depression had to be discontinued after completion of the 4-week screening/ prospective observational phase, (5) statement that there were no changes to the current oral antidepressant treatment regimen for the duration of the screening/prospective observational phase, (6) definition of clinically significant ECG abnormalities as defined by QT interval corrected according to Fridericia's formula (QTcF).
31 May 2016	Amendment INT-2 included following changes: Revised inclusion; deleted the exclusion for first degree atrioventricular (AV) block; revision was made to the analysis of onset of clinical response (defined as $\geq 50\%$ reduction in the MADRS total score by the day after taking the first dose of double-blind medication [Day 2, 24 hours] that continued through the end of the 4-week double-blind induction phase) to indicate that subjects were allowed 1 excursion; permitted use of prescribed psychostimulants for indications other than major depressive disorder (MDD) with dosing restrictions on intranasal treatment session days; addition of (1) MADRS assessment during the follow-up phase, (2) information about 54135419TRD3008, an open-label safety extension study; maximum dose of sertraline in oral antidepressant titration schedule increased from 150 mg/day to 200 mg/day; clarification of procedure to be followed if subjects withdrew from the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Transient, dissociative effects of esketamine are difficult to blind, site staff who observed treatment sessions could have been biased. To ensure unbiased efficacy evaluations, independent, remote, blinded MADRS raters assessed treatment response.

Notes:
