Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 February 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of the study was to assess the efficacy of intranasal esketamine + oral antidepressant compared with an oral antidepressant + intranasal placebo in delaying relapse of depressive symptoms in subjects with treatment-resistant depression (TRD) who were in stable remission after an induction and optimization course of intranasal esketamine + oral antidepressant.

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. The safety assessments included clinical laboratory tests (hematology, serum chemistry, and urinalysis), vital sign measurements (temperature, pulse/heart rate, respiratory rate, and blood pressure), physical examinations, height, body weight, and neck circumference, electrocardiograms (ECGs), pulse oximetry, nasal examination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 October 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 14
Country: Number of subjects enrolled	Brazil: 64
Country: Number of subjects enrolled	Canada: 5

Country: Number of subjects enrolled	Turkey: 53
Country: Number of subjects enrolled	United States: 190

Worldwide total number of subjects	705
EEA total number of subjects	358

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	705
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total of 705 subjects were enrolled. Out of which 437 (direct entry [DE] subjects) entered in induction (IND) phase and 268 subjects (150 transferred-entry [TE] subjects from study ESKETINTRD3001 [NCT02417064] and 118 subjects from study ESKETINTRD3002 [NCT02418585]) entered in this study in optimization (OP) phase.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	No
Arm title	IND: Intranasal Esketamine + Oral AD (DE Subjects)

Arm description:

Subjects in open-label induction (IND) phase received 56 or 84 milligram intranasal esketamine solution twice weekly with open-label oral antidepressant (AD) (one of: duloxetine/escitalopram/sertraline/venlafaxine extended release [XR]) once daily for 4 weeks. Subjects who completed IND phase and met predefined response criteria entered optimization (OP) phase.

Arm type	Experimental
Investigational medicinal product name	Esketamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray, solution
Routes of administration	Nasal use

Dosage and administration details:

Subjects received 56 or 84 mg intranasal esketamine solution twice weekly.

Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.

Arm title	OP: Intranasal Esketamine + Oral AD (DE+TE Subjects)
------------------	--

Arm description:

Subjects received intranasal esketamine (same dose) solution once per week for first 4 weeks, then once per week/once every other week based on severity of depressive symptoms, and continued same oral AD from IND phase for 12 weeks. Subjects who completed and met the predefined remission/response criteria entered maintenance (MA) phase.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Esketamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray, solution
Routes of administration	Nasal use

Dosage and administration details:

Subjects received 56 or 84 mg intranasal esketamine solution once per week for first 4 weeks, then once per week/once every other week.

Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.

Arm title	OP: Oral AD + Intranasal Placebo (TE Subjects)
------------------	--

Arm description:

Optimization phase (transferred-entry subjects): Subjects received intranasal esketamine matching placebo solution once per week for the first 4 weeks, then once per week or once every other week depending on severity of depressive symptoms with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine XR), once daily for 12 weeks. Subjects who completed and met the predefined remission/response criteria entered MA phase.

Arm type	Placebo
Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray, solution
Routes of administration	Nasal use

Dosage and administration details:

Subjects received intranasal esketamine matching placebo solution once per week for the first 4 weeks, then once per week or once every other week.

Arm title	MA: Intranasal Esketamine + Oral AD (DE+TE Subjects)
------------------	--

Arm description:

MA phase (DE+TE): subjects were randomized (at end of OP phase) to receive intranasal esketamine (same dose) once weekly/once every other week based on severity of depressive symptoms and continued same oral AD from IND phase.

Arm type	Experimental
Investigational medicinal product name	Esketamine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray, solution
Routes of administration	Nasal use

Dosage and administration details:

Subjects received 56 or 84 mg intranasal esketamine solution once weekly or once every other week.

Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily	
Arm title	MA: Oral AD + Intranasal Placebo (DE+TE Subjects)
Arm description:	
Maintenance phase (DE+TE subjects): Subjects (including randomized subjects from intranasal esketamine arm after OP phase and TE subjects who continued from previous phase in this group) to receive intranasal esketamine placebo with oral AD.	
Arm type	Placebo
Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.	
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray, solution
Routes of administration	Nasal use
Dosage and administration details:	
Subjects received intranasal esketamine placebo once weekly or once every other week.	
Arm title	FU: Intranasal Esketamine + Oral AD
Arm description:	
Follow-up (FU) phase: subjects received no intranasal esketamine but continued oral AD for 2 weeks unless determined to not be clinically appropriate. Subjects who were non-responders at the end of IND phase or who were early terminated at any phase proceeded directly to FU phase.	
Arm type	Experimental
Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.	
Arm title	FU: Oral AD + Intranasal Placebo
Arm description:	
FU Phase: subjects received oral AD for 2 weeks of the follow-up phase unless it was determined to not be clinically appropriate. Subjects who were non-responders in IND phase and who were in OP and MA phase at study termination proceeded directly to FU phase.	
Arm type	Placebo

Investigational medicinal product name	Oral Antidepressant
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received one of duloxetine/escitalopram/sertraline/venlafaxine XR oral antidepressant once daily.

Primary: Time to Relapse in Subjects with Stable Remission (Maintenance Phase)

End point title	Time to Relapse in Subjects with Stable Remission (Maintenance Phase)
-----------------	---

End point description:

Relapse (any of following): MADRS total score ≥ 22 for 2 consecutive assessments separated by 5-15 days and/or hospitalization for worsening depression/any clinical event suggestive of relapse of depressive illness such as suicide attempt/completed suicide/hospitalization to prevent suicide; If hospitalized, start date of hospitalization will be date of relapse, if not then date of event will be used. Stable remission: MADRS total score ≤ 12 for at least 3 of last 4 weeks of OP phase, with 1 excursion total score > 12 or 1 missing assessment at OP week 13/14. FAS (stable remitters) = all randomized subjects who were in stable remission at end of OP phase and received at least 1 dose of study drug and oral AD in MA phase. '99999' = for esketamine arm that median time to relapse (time point at which cumulative survival function equals 0.5 or 50%) was not estimable, as group never reached 50%; 99999 (placebo arm) = upper limit of CI could not be estimated due to insufficient data.

End point type	Primary

CGI-S: clinician-determined summary measure of severity of subject's illness that considers information, including knowledge of subject's history, psychosocial circumstances, symptoms, behavior, impact of symptoms on ability to function. CGI-S evaluates severity of psychopathology on a scale of 0-7. Subject is assessed on severity of mental illness at time of rating as: 0=not assessed; 1=normal (not at all ill); 2=borderline mentally ill; 3=mildly ill; 4=moderately ill; 5=markedly ill; 6=severely ill; 7=among most extremely ill patients. Change from baseline in CGI-S score, (LOCF data) at endpoint was reported. Last post baseline observation was carried forward as endpoint. FAS (Stable responders): all randomized subjects who were stable responders (but not stable remitters) at end of OP phase and who received at least 1 dose of intranasal study drug and oral AD in MA phase. 'N' (number of subjects analyzed) signifies number of subjects who were evaluable for this endpoint.

Secondary: Change from Baseline in Generalized Anxiety Disorder-7 Items (GAD-7) Total Score at Endpoint in Subjects with Stable Remission (Maintenance Phase)

End point title	Change from Baseline in Generalized Anxiety Disorder-7 Items (GAD-7) Total Score at Endpoint in Subjects with Stable Remission (Maintenance Phase)
-----------------	--

End point description:

GAD-7 is brief and validated 7-item self-report assessment of overall anxiety. Subjects respond to each item using a 4-point scale with response categories: 0=not at all, 1=several days, 2=more than half the days, 3=nearly every day. Item responses are summed to yield total score with range of 0-21, higher scores indicate more anxiety. Severity of GAD-7 is categorized as: None (0-4), Mild (5-9), Moderate (10-14) and Severe (15 -21). Item responses are summed for total score (range of 0-21), higher scores indicating more anxiety. Change from baseline in GAD-7 total score, (LOCF data), at endpoint was reported. Last post baseline observation was carried forward as endpoint. FAS (Stable remitters) included all randomized subjects who were in stable remission at end of OP phase and received at least 1 dose of study drug and oral AD in MA phase. Here 'N' (number of subjects analyzed) signifies number of subjects who were evaluable for this endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Approximately 2.4 years

Adverse event reporting additional description:

Safety analysis set included all subjects who received at least 1 dose of intranasal study medication or 1 dose of oral antidepressant in respective phase (Induction, Optimization, Maintenance). Follow-up analysis set included all subjects who entered the follow-up phase.

Assessment type	Non-systematic

Reporting groups

Reporting group title	IND: DE Subjects: Intranasal Esketamine + Oral AD
-----------------------	---

Reporting group description:

Subjects in open-label induction (IND) phase received 56 or 84 milligram intranasal esketamine solution twice weekly with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine extended release [XR]) once daily for 4 weeks.

Reporting group title	MA: Intranasal Esketamine + Oral AD (DE+TE Subjects)
-----------------------	--

Reporting group description:

Maintenance (MA) phase (both direct-entry and transferred-entry subjects): received 56 mg or 84 mg intranasal esketamine solution once per week for the first 4 weeks, then once per week or once every other week depending on severity of depressive symptoms with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine XR), once daily until relapse or study termination.

Reporting group title	OP: Intranasal Esketamine + Oral AD (DE+TE Subjects)
-----------------------	--

Reporting group description:

Subjects received intranasal esketamine (same dose) solution once per week for first 4 weeks, then once per week/once every other week based on severity of depressive symptoms, and continued same oral AD from IND phase for 12 weeks.

Reporting group title	MA: Oral AD + Intranasal Placebo (DE+TE Subjects)
-----------------------	---

Reporting group description:

Maintenance phase (both direct-entry and transferred-entry subjects): received intranasal esketamine matching placebo solution once per week for the first 4 weeks, then once per week or once every other week depending on severity of depressive symptoms with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine XR), until relapse or study termination.

Reporting group title	FU: Intranasal Esketamine + Oral AD
-----------------------	-------------------------------------

Reporting group description:

Subjects (who were non-responders in IND phase and who were in OP and MA phase at study termination) who received at least 1 dose of 56 mg or 84 mg intranasal esketamine participated in the follow-up (FU) phase. No intranasal esketamine was administered during FU phase. Subjects received oral AD for 2 weeks of the follow-up phase unless it was determined to not be clinically appropriate.

Reporting group title	FU: Oral AD + Intranasal Placebo
-----------------------	----------------------------------

Reporting group description:

Subjects (who were non-responders in IND phase and who were in OP and MA phase at study termination) who received intranasal esketamine matching placebo with oral AD participated in the FU phase. Subjects received oral AD for 2 weeks of the follow-up phase unless it was determined to not be clinically appropriate.

Reporting group title	OP_TES: Oral AD + Intranasal Placebo
-----------------------	--------------------------------------

Reporting group description:

OP phase (transferred-entry subjects [TES]): received intranasal esketamine matching placebo solution once per week for the first 4 weeks, then once per week or once every other week depending on severity of depressive symptoms with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine XR), once daily for 12 weeks.

Reporting group title	MA_TES: Oral AD + Intranasal Placebo
-----------------------	--------------------------------------

Reporting group description:

Maintenance phase (transferred-entry subjects): Subjects were randomized (at the end of optimization phase) to intranasal esketamine matching placebo solution once per week for the first 4 weeks, then once per week or once every other week depending on severity of depressive symptoms with open-label oral AD (one of: duloxetine/escitalopram/sertraline/venlafaxine XR).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 January 2016	The overall reason for the amendment was to update and clarify the protocol based on ongoing feedback received during study initiation activities.
09 June 2016	The overall reason for the amendment was based on feedback received from investigators involved in the study, the subject entry criteria had been revised to improve recruitment.
04 April 2017	The overall reason for the amendment was to enhance the number of clinically valid subjects proceeding to the maintenance phase as stable remitters, the stable remission criteria had been revised.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Esketamine's known transient dissociative, sedative effect difficult to blind, potential for treatment - emergent symptoms to have biased site staff who observed dosing was mitigated by independent, remote, blinded MADRS raters who assessed response.

Notes:
