

Clinical trial results:

A randomized, double-blind, placebo-controlled, prospective, multicenter, parallel group study to assess the safety and efficacy of macitentan in patients with portopulmonary hypertension

Summary

EudraCT number	2014-004624-21
Trial protocol	GB DE CZ ES FR
Global end of trial date	31 October 2018

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 October 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of macitentan on pulmonary vascular resistance (PVR) as compared to placebo in patients with portopulmonary hypertension (PoPH).

Protection of trial subjects:

Prior to the start of the study, each study site consulted an Independent Ethics Committee (IEC) or Institutional Review Board (IRB), i.e., a review panel that was responsible for ensuring the protection of the rights, safety and well-being of human subjects involved in a clinical investigation. The study was conducted in compliance with the principles of the 'Declaration of Helsinki', the International Council for Harmonisation (ICH)-Good Clinical Practice (GCP) guidelines, and with the laws and regulations of the country in which the clinical research was conducted. Both Actelion and the investigator had the right to terminate the study at any time, and in such a case, were responsible for protecting the subjects' interests. Written informed consent was obtained from each individual participating in the study prior to any study procedure and after adequate explanation of the aims, methods, objectives, and potential hazards of the study. It was made clear to each patient that he or she was completely free to refuse to enter the study, or to withdraw from it at any time for any reason. A description of any incentives to participate in the study was provided in the informed consent form.

Background therapy:

As per randomization stratification, 63.5% of patients (54 out of 85 patients) were receiving a pulmonary arterial hypertension (PAH)-specific therapy at baseline.

Evidence for comparator: -

Actual start date of recruitment	23 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 5
Country: Number of subjects enrolled	Czech Republic: 4
Country: Number of subjects enrolled	France: 39
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 23
Worldwide total number of subjects	85
EEA total number of subjects	57

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	64
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients at 39 sites in 7 countries were screened and were randomized at 36 sites in these 7 countries (Brazil, Czech Republic, France, Germany, Spain, UK and US).

Pre-assignment

Screening details:

A total of 119 participants were screened and 85 participants were randomized (43 to macitentan 10 mg once daily and 42 to matching placebo) and received double-blind (DB) study treatment. Overall, 80 participants who completed DB treatment period entered the open-label (OL) treatment period and 33 participants in open-label extension (OLE) period.

Period 1

Period 1 title	Double-blind (DB) treatment period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Macitentan 10 mg

Arm description:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period.

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily.

Arm title	Placebo
------------------	---------

Arm description:

Participants received Macitentan matching placebo film-coated tablets orally once daily for 12 weeks in Double-blind treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Macitentan matching placebo film-coated tablets orally once daily.

Number of subjects in period 1	Macitentan 10 mg	Placebo
Started	43	42
Completed	39	41
Not completed	4	1
Physician decision	3	-
Consent withdrawn by subject	-	1
Lack of efficacy	1	-

Period 2

Period 2 title	Open-label (OL) treatment period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Macitentan 10 mg
-----------	------------------

Arm description:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period. Participants who completed DB treatment period continued to receive macitentan 10 mg for 12 weeks (up to Week 24) in OL treatment period.

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily.

Number of subjects in period 2	Macitentan 10 mg
Started	80
Completed	71
Not completed	9
Consent withdrawn by subject	2
Physician decision	3
Death	4

Period 3

Period 3 title	OL Extension Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Macitentan 10 mg
------------------	------------------

Arm description:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period. Participants who completed DB treatment period continued to receive macitentan 10 mg for 12 weeks (up to Week 24) in OL treatment period . Participants (who were randomized at French sites) who completed the core phase of the study as scheduled and opted to continue receiving OL study treatment continued to receive macitentan 10 mg in OLE period.

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily.

Number of subjects in period 3^[1]	Macitentan 10 mg
Started	33
Completed	27
Not completed	6
Consent withdrawn by subject	1
Physician decision	3
Death	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects are different as randomized subjects only at French sites who completed the core phase of study and opted to continue receiving OL study treatment continued to receive macitentan 10 mg in OLE period.

Reporting group title	Macitentan 10 mg
Reporting group description: Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period. Participants who completed DB treatment period continued to receive macitentan 10 mg for 12 weeks (up to Week 24) in OL treatment period . Participants (who were randomized at French sites) who completed the core phase of the study as scheduled and opted to continue receiving OL study treatment continued to receive macitentan 10 mg in OLE period.	
Subject analysis set title	Full analysis set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: The Full Analysis Set (FAS) includes all randomized patients who received at least one dose of study treatment in the DB treatment period and have a baseline value for the primary endpoint (pulmonary vascular resistance). Subjects are evaluated according to the treatment to which they were assigned (which may be different from the treatment they have received).	

Primary: Change from baseline to Week 12 in pulmonary vascular resistance (PVR)

End point title	Change from baseline to Week 12 in pulmonary vascular resistance (PVR)
End point description: The relative change from baseline to Week 12 in PVR is expressed as a ratio of Week 12 to baseline PVR.	
End point type	Primary
End point timeframe: From enrollment/baseline to Week 12 in the DB treatment period	

End point values	Macitentan 10 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	43	42		
Units: ratio of baseline PVR				
geometric mean (confidence interval 95%)	0.63 (0.58 to 0.67)	0.98 (0.91 to 1.05)		

Statistical analyses

Statistical analysis title	Analysis of change in PVR
Statistical analysis description: The null hypothesis (change of PVR at Week 12 as a ratio of baseline PVR in subjects treated with placebo or macitentan is the same) is tested on the primary endpoint by means of an analysis of covariance (ANCOVA) model on the log(e) transformed ratios of PVR at Week 12 to baseline PVR.	
Comparison groups	Macitentan 10 mg v Placebo
Number of subjects included in analysis	85
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	< 0.0001
Method	ANCOVA
Parameter estimate	ratio of geometric means
Point estimate	0.65
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.59
upper limit	0.72

Notes:

[1] - ANCOVA model adjusted by treatment, background PAH-specific therapy at baseline and region as factors, and log-transformed PVR at baseline as a covariate.

Secondary: Change from baseline to Week 12 in 6-minute walk distance (6MWD)

End point title	Change from baseline to Week 12 in 6-minute walk distance (6MWD)
End point description: The purpose of the six minute walk is to test exercise tolerance and capacity. The test measures the distance an individual is able to walk over a total of six minutes on a hard, flat surface. The goal is for the individual to walk as far as possible in six minutes.	
End point type	Secondary
End point timeframe: From enrollment/baseline to Week 12 in the DB treatment period	

End point values	Macitentan 10 mg	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	43	42		
Units: meter				
arithmetic mean (standard deviation)				
6MWD at baseline	385.8 (± 99.97)	383.2 (± 108.90)		
6MWD at Week 12	392.2 (± 98.46)	380.8 (± 114.98)		
Change of 6MWD from baseline to Week 12	6.4 (± 65.74)	-2.4 (± 43.65)		

Statistical analyses

Statistical analysis title	Analysis of change in 6MWD at Week 12
Comparison groups	Macitentan 10 mg v Placebo
Number of subjects included in analysis	85
Analysis specification	Pre-specified
Analysis type	superiority ^[2]
P-value	= 0.4264 ^[3]
Method	mixed-effect model repeated measure
Parameter estimate	Least squares (LS) mean difference
Point estimate	9.73
Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.5
upper limit	33.95

Notes:

[2] - The main analysis on 6MWD was performed using a mixed-effect model repeated measure (MMRM) adjusted for treatment, visit, region, PAH-specific therapy at baseline, and treatment-by-visit interaction as factors, and baseline 6MWD and WHO functional class (FC) as covariates.

[3] - No adjustment was made for multiplicity for secondary endpoints, therefore all corresponding p-values provided are of an exploratory nature.

Secondary: Change from baseline to Week 12 in WHO functional class (FC)

End point title	Change from baseline to Week 12 in WHO functional class (FC)
-----------------	--

End point description:

Changes from baseline to Week 12 in WHO FC were dichotomized as worsening (i.e., change > 0) versus no change or improvement (i.e., change ≤ 0). Class I: no symptoms with exercise or at rest. No limitation of activity. Class II: No symptoms at rest but slight limitation with ordinary activities causing symptoms (e.g. short of breath with climbing a flight of stairs, grocery shopping, or making the bed). Class III: may not have symptoms at rest but activities greatly limited by shortness of breath, fatigue, or near fainting. Class IV: symptoms at rest (e.g. dyspnea and/or fatigue) and inability to carry out any physical activity without symptoms. Patients in class IV manifest signs of right heart failure.

End point type	Secondary

-----------------------	--

Reporting group description:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period. Participants who completed DB treatment period continued to receive macitentan 10 mg for 12 weeks (up to Week 24) in OL treatment period

Reporting group title	OL Extension Period: Macitentan 10 mg
-----------------------	---------------------------------------

Reporting group description:

Participants received Macitentan 10 milligram (mg) film-coated tablets orally once daily for 12 weeks in Double-blind treatment period. Participants who completed DB treatment period continued to receive macitentan 10 mg for 12 weeks (up to Week 24) in OL treatment period . Participants (who were randomized at French sites) who completed the core phase of the study as scheduled and opted to continue receiving OL study treatment continued to receive macitentan 10 mg in OLE period.

Serious adverse events	Double-Blind (DB) Period: Macitentan 10 mg	DB Period: Placebo	Open-Label (OL) Period: Macitentan 10 mg

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 January 2015	Amendment 1, resulting in Global Protocol Version 2: • Visit window was changed to ± 4 days from ± 7 days to ensure patients had enough study treatment until the next visit. • Reference to hepatic event questionnaire was removed as this form was removed from the electronic Case Report Form (eCRF) • Daclatasvir was added as permitted Hepatitis C medication following its approval • Analysis of urea was removed as it was not needed in addition to blood urea nitrogen. • NT-proBNP storage/shipping text was further clarified • It was clarified that laboratory assessments to be used for eligibility assessment were those performed at Visit 1 / Screening (not Visit 2 / Randomization). • A urine dipstick pregnancy test was added to the assessments at Visit 2 / Randomization in order to have the result prior to treatment assignment. • It was clarified that hepatic vein catheterization (HVC) was not mandatory • It was clarified that PAH or PoPH medications stopped within 3 months prior to randomization were required to be documented in the eCRF.
21 April 2016	Amendment 2, resulting in Global Protocol Version 3: • It was clarified that local laboratory assessments were allowed in order to simplify eligibility assessment and implementation of the stopping rule (i.e., for calculating Model for End-Stage Liver Disease (MELD) score and/or Child-Pugh classification) at Week 12. It was further clarified that the central laboratory kit was required to be used in parallel to the use of local laboratory assessments. • It was clarified that study treatment was allowed to be continued in case of orthotopic liver transplantation (OLT) during the OL period of the study, based on medical consideration. • It was allowed to perform the pharmacokinetic (PK) substudy closer to the patient's home to ease participation • Certain eligibility criteria were modified based on medical considerations, e.g., exclusion criterion 15: transplant expected within 3 months removed; exclusion 21: calcium channel blockers (CCBs) moved to exclusion 20; beta blockers moved to exclusion 10) • The list of allowed and forbidden medications was updated with newly approved antiviral medications • It was clarified that screening started on the day of ICF signature • The definition of the Full Analysis Set was modified to include patients for whom post-baseline PVR was imputed

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
