

Clinical trial results:

A randomized, double-blind, placebo-controlled phase 2 study of paclitaxel in combination with reparixin compared to paclitaxel alone as front-line therapy for Metastatic Triple-Negative Breast Cancer (FRIDA).

Summary

EudraCT number	2014-004796-23
Trial protocol	BE CZ IT ES PL FR
Global end of trial date	23 March 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 February 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 February 2019
Global end of trial reached?	Yes
Global end of trial date	23 March 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate Progression Free Survival (PFS), defined as the number of days between the date of randomization and the date of clinical disease progression (PD) according to RECIST criteria version 1.1, as assessed by Independent Radiology Review, or death for any cause, whichever occurs first, in patients with metastatic triple-negative breast cancer (TNBC) treated with the combination of paclitaxel and orally administered reparixin compared to paclitaxel alone.

Protection of trial subjects:

The study was conducted in full compliance with the principles of the "Declaration of Helsinki" and subsequent revisions, International Conference on Harmonisation (ICH) guidelines, and all of the applicable US Code of Federal Regulations (CFR), 21 CFR Part 50 & 312. In addition, this study adhered to all local regulatory requirements and requirements for data protection.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 July 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

EEA total number of subjects	87

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	90
From 65 to 84 years	33
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

195 patients were enrolled in the study; one was enrolled into the study and was a screen failure but was not counted in the analysis due to the fact that the screen failure page was not completed. Of the 194 enrolled patients, 123 were randomized and included in the ITT Population: 62 patients in Group 1 and 61 patients in Group 2.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

Reparixin tablets and placebo tablets were packaged in white PVDC/PE//PVC/aluminum blisters in the form of patient kits and were numbered to maintain blinding.

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1

Arm description:

Paclitaxel 80 mg/m² intravenous (i.v.) (Days 1, 8, and 15 of 28-day cycle) + reparixin oral tablets 1200 mg three times a day (t.i.d.) continuing from Day 1 to Day 21.

Duration of Treatment: 28-day cycles of combination therapy reparixin oral tablets + paclitaxel intravenous weekly three weeks on and one week off until disease progression according to RECIST criteria version 1.1, withdrawal of consent or unacceptable toxicity, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Reparixin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1200 mg three times a day (t.i.d.) continuing from Day 1 to Day 21 of 28-day cycle.

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

80 mg/m² intravenous (i.v.) (Days 1, 8, and 15 of 28-day cycle).

Arm title	Group 2
------------------	---------

Arm description:

Paclitaxel 80 mg/m² i.v. (Days 1, 8, and 15 of 28-day cycle) + placebo oral tablets 1200 mg t.i.d. continuing from Day 1 to Day 21.

Duration of Treatment: 28-day cycles of combination therapy placebo oral tablets + paclitaxel intravenous weekly three weeks on and one week off until PD according to RECIST criteria version 1.1, withdrawal of consent or unacceptable toxicity, whichever occurred first.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

1200 mg three times a day (t.i.d.) continuing from Day 1 to Day 21 of 28-day cycle..

Investigational medicinal product name	Paclitaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

80 mg/m² intravenous (i.v.) (Days 1, 8, and 15 of 28-day cycle)

Number of subjects in period 1	Group 1	Group 2

Parameter estimate	Hazard ratio (HR)
Point estimate	1.03
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.64
upper limit	1.65

Notes:

[2] - Overall survival was summarized in the ITT Population using Kaplan-Meier curves and compared between treatment groups using a stratified log-rank test.

[3] - p-value based on a log-rank test stratified by randomized sub-populations, newly diagnosed metastatic patients and patients that had relapsed following a prior (neo)adjuvant chemotherapy regimen.

Secondary: Objective response rate (ORR)

End point title	Objective response rate (ORR)
-----------------	-------------------------------

End point description:

The ORR was defined as the percentage of patients achieving CR or PR in the Evaluable Population. The response rate was calculated from the independently reviewed assessment best response. In case of PR or CR, only confirmed cases were considered to be responses.

Complete Response (CR) = Disappearance of all target lesions;

Partial Response (PR) = $\geq 30\%$ decrease in the sum of the longest diameter of target lesions;

Overall Response (OR) = CR + PR.

Patients with unknown or missing response, including response of "not all evaluated" or "unable to determine", were treated as non-responders; i.e., they were included in the denominator when calculating the percentages.

Patients must have completed at least one course of treatment and performed at least one disease assessment to be considered evaluable for response.

End point type	Secondary
----------------	-----------

fatal AE	3	4		

Statistical analyses

No statistical analyses for this end point

Secondary: Best overall response (BOR)

End point title	Best overall response (BOR)
End point description:	
BOR is defined as the best response among all overall responses (in the order complete response [CR], partial response [PR], stable disease [SD], and progressive disease [PD]) recorded as an independent review response from the start of reparixin or placebo until disease progression/recurrence or end of treatment, or death, whichever comes first. The status of BOR of PR or CR needs to be confirmed by repeat tumor assessment within no less than 4 weeks according to RECIST version 1.1. If the status of CR or PR cannot be confirmed by repeat tumor assessment, the best overall response of unconfirmed CR and PR will be PR and SD, respectively. Patients must have completed at least 1 cycle and performed at least 1 disease assessment to be considered evaluable for response.	
End point type	Secondary
End point timeframe:	
From the start of treatment, every 8 weeks.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Throughout the study, until off-treatment visit (performed 14 to 28 days following the last dose of study drug), up to 985 days.

Adverse event reporting additional description:

Incidence and profile of the TEAEs during the study are typical and expected for patients on chemotherapy, and was similar in both groups.

The most common TEAEs in group 1 were nausea, alopecia, anemia, asthenia, and diarrhea. The most common TEAEs in group 2 were fatigue, nausea, alopecia, diarrhea, and asthenia. Here only these are reported.

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Group 1 - Safety population	Group 2- Safety population	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	60 / 61 (98.36%)	57 / 60 (95.00%)	
Blood and lymphatic system disorders			
Anaemia	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
subjects affected / exposed	18 / 61 (29.51%)	8 / 60 (13.33%)	
occurrences (all)	18	8	
General disorders and administration site conditions			
Asthenia	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
subjects affected / exposed	16 / 61 (26.23%)	13 / 60 (21.67%)	
occurrences (all)	16	13	
Fatigue	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
subjects affected / exposed	11 / 61 (18.03%)	26 / 60 (43.33%)	
occurrences (all)	11	26	
Gastrointestinal disorders			
Diarrhoea	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
subjects affected / exposed	16 / 61 (26.23%)	15 / 60 (25.00%)	
occurrences (all)	16	15	
Nausea	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
subjects affected / exposed	23 / 61 (37.70%)	22 / 60 (36.67%)	
occurrences (all)	23	22	
Skin and subcutaneous tissue disorders			

Alopecia	Additional description: For each system organ class and preferred term, patients are counted only once, even if they experienced multiple events in that system organ class or preferred term.		
	subjects affected / exposed	21 / 61 (34.43%)	21 / 60 (35.00%)
	occurrences (all)	21	21

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 July 2015	Primary endpoint, ECG at pre-study, concomitant therapies, methods of birth control, paclitaxel dose modifications and delays
16 September 2016	Primary endpoint and inclusion of newly diagnosed metastatic patients.
01 December 2017	Patients' follow up.
09 April 2019	Patients' follow up.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No limitations or caveats are applicable to this summary of the results.

Notes:
