

Clinical trial results:

Pharmacoepidemiology study to define the long-term safety profile of tenofovir disoproxil fumarate (Tenofovir DF, Viread®) and describe the management of Tenofovir DF-associated renal and bone toxicity in Chronic Hepatitis B (CHB)-infected adolescents aged 12 to <18 years in Europe

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 April 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 February 2018
Global end of trial reached?	Yes
Global end of trial date	11 April 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial was to characterize the long term (i.e., 96 weeks of follow up) bone safety profile of open-label tenofovir disoproxil fumarate (DF) treatment of adolescents with chronic hepatitis B (CHB) infection. This includes prospectively evaluating and comparing the bone mineral density (BMD) change between adolescents with CHB 12 to < 18 years of age treated with tenofovir DF in European treatment centers who are assigned to one of two schedules for renal and bone laboratory monitoring and BMD measurement. Primary study outcome will be the percent changes in BMD from Baseline through study Week 96.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Romania: 8
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Greece: 2
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	France: 3
Worldwide total number of subjects	30
EEA total number of subjects	30

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	30
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in Europe. The first participant was screened on 03 July 2015. The last study visit occurred on 11 April 2018. The study did not achieve targeted enrollment as it was prematurely terminated by the Pharmacovigilance Risk Assessment Committee (PRAC).

Pre-assignment

Screening details:

35 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Tenofovir DF + Increased Bone/Renal Monitoring

Arm description:

One 300 mg tablet given once daily for up to 96 weeks + laboratory bone biomarker testing and lumbar spine and whole-body dual-energy x-ray absorptiometry (DXA) scans every 24 weeks from baseline to Week 96 (5 scans), and monitoring of renal function at 4 and 12 weeks after baseline and every 12 weeks thereafter. With the exception of an enhanced monitoring protocol for bone and renal outcomes, participants will be managed according to local standards of care.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	Viread®, TDF
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

300 mg once daily

Arm title	Tenofovir DF + Prespecified Bone Monitoring
------------------	---

Arm description:

One 300 mg tablet given once daily for up to 96 weeks + laboratory bone biomarker testing and lumbar spine and whole-body DXA scans at baseline, Week 48, and Week 96. With the exception of pre-specified bone monitoring, participants will be managed according to local standards of care.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	Viread®, TDF
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

300 mg once daily

Primary: Percentage of Participants with Bone-Related Adverse Events and/or a \geq 4% Reduction in BMD from Baseline to Week 96

End point title	Percentage of Participants with Bone-Related Adverse Events and/or a \geq 4% Reduction in BMD from Baseline to Week 96 ^[1]
-----------------	---

End point description:

Participants in the Safety Analysis Set (participants who were randomized into the study and received at least one dose of Viread) with available data were analyzed.

End point type	Primary
----------------	---------

End point timeframe:

Week 96

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Because this study did not achieve targeted enrollment as it was prematurely terminated by the PRAC, the statistical analysis for this endpoint was not performed.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 February 2015	Serum renal chemistry (i.e., glucose, creatinine, calculated creatinine clearance): at 4 weeks and 12 weeks from Baseline and every 12 weeks thereafter [changed from every 4 weeks from Baseline to Week 48 and every 12 weeks thereafter]. Urinalysis (i.e., protein, glucose, creatinine, phosphate, bicarbonate, blood): at 4 weeks and 12 weeks from Baseline and every 12 weeks thereafter [changed from every 4 weeks from Baseline to Week 48 and every 12 weeks thereafter]. Clarification of pregnancy screening (after Baseline) as a urine screen wherever referenced. Clarification to recommend a fasted state for collecting serum renal chemistry and urinalysis, serum bone chemistry. Clarification that DXA should be performed +/- 14 days from the scheduled clinic visit.
10 March 2015	Revised reference to the study drug through out the protocol. Changed from 245 mg tenofovir disoproxil to 300 mg tenofovir disoproxil fumarate, tenofovir DF (Viread®), which is equivalent to 245 mg tenofovir disoproxil.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
