

Clinical trial results:

A Phase 2b/3, Multi-Center, Extension Study of V72P10 to Assess Antibody Persistence at Eighteen Months After the Completion of the Vaccination Course in Study V72P10.

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Summary

EudraCT number	2014-004992-21
Trial protocol	Outside EU/EEA
Global end of trial date	17 January 2012

Results information

Result version number	v2 (current)
This version publication date	01 June 2016
First version publication date	19 March 2015
Version creation reason	<ul style="list-style-type: none">Correction of full data set re-QC study because of EudraCT system glitch and minor updates to results are required.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 October 2012
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	17 January 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To explore antibody persistence at eighteen months after the completion of the vaccination course in subjects enrolled in the V72P10 study.

Protection of trial subjects:

This trial was performed with the ethical principles that have their origin in the latest version of the Declaration of Helsinki accepted by the local authorities and that are consistent with Good Clinical Practices (GCPs) and the applicable regulatory requirement(s) for the country in which the trial is conducted, GCPs according to International Conference on Harmonization (ICH) guidelines, the applicable regulatory requirements(s) for the country in which the study is conducted, and applicable standard operating procedures (SOPs).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 August 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Chile: 817
Worldwide total number of subjects	817
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	611
Adults (18-64 years)	206

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at 6 study centers in Chile.

Pre-assignment

Screening details:

All enrolled subjects were included in the trial.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	rMenB0
------------------	--------

Arm description:

Subjects received 1 dose of Recombinant Meningococcal B Vaccine with Outer Membrane Vesicle from the New Zealand Strain (rMenB+OMV-NZ) at 0 month and 3 doses of placebo at 1, 2 and 6 months in V72P10.

Arm type	Experimental
Investigational medicinal product name	rMenB+OMV NZ
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single of dose of 0.5mL vaccine or 0.5 mL placebo is administered at each schedule by IM injection into deltoid muscle of non-dominant arm.

Arm title	rMenB06
------------------	---------

Arm description:

Subjects received 2 doses each of rMenB+OMV-NZ at 0 and 6 months and placebo at 1 and 2 months in V72P10.

Arm type	Experimental
Investigational medicinal product name	rMenB+OMV NZ
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single of dose of 0.5mL vaccine or 0.5 mL placebo is administered at each schedule by IM injection into deltoid muscle of non-dominant arm.

Arm title	rMenB01
------------------	---------

Arm description:

Subjects received 2 doses each of rMenB+OMV-NZ at 0 and 1 months and placebo at 2 and 6 months in V71P10.

Arm type	Experimental

Subject analysis set title	All Enrolled Set
Subject analysis set type	Full analysis
Subject analysis set description: All subjects who enrolled in this study.	

Primary: 1. Percentage of subjects with hSBA titer $\geq 1:4$ at 18 months after the completion of the vaccination course in subjects enrolled in the V72P10 study and in Naive Subjects.

End point title	1. Percentage of subjects with hSBA titer $\geq 1:4$ at 18 months after the completion of the vaccination course in subjects enrolled in the V72P10 study and in Naive Subjects. ^[1]
End point description: Immunogenicity was evaluated by measuring the percentage of subjects with serum bactericidal activity using human complement(hSBA) titer $>1:4$ against 44/76_SL, 5/99, NZ98/254 strains after 18 months. The analysis was performed as per the Modified Intention To Treat (MITT) dataset.	
End point type	Primary

End point timeframe:

Month 0 (bl=baseline), month 1 and Month 18 after last vaccination in V72P10 study.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with this immunogenicity objective.

Statistical analyses

No statistical analyses for this end point

Primary: 4. Geometric Mean Concentrations (GMCs) of antibodies to vaccine antigen 287-953.

End point title	4. Geometric Mean Concentrations (GMCs) of antibodies to vaccine antigen 287-953. ^[3]
-----------------	--------------------------------------------------------------------------------------------------

End point description:

Immunogenicity was evaluated by measuring the GMCs against Antigen 287-953, at 18 months after the completion of the vaccination course in subjects enrolled in V72P10 Study and in Naive Subjects. The analysis was performed as per the MITT dataset.

End point type	Primary
----------------	---------

End point timeframe:

18 months after completion of vaccination course in the V72P10 study.

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with this immunogenicity objective.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

18 months after vaccination.

Adverse event reporting additional description:

There was no vaccine administered in the study. Only Safety data related to the blood draw procedure were collected.

Assessment type	Non-systematic

Reporting groups

Reporting group title	rMenB06
-----------------------	---------

Reporting group description:

Subjects received 2 doses each of rMenB+OMV-NZ at 0 and 6 months and placebo at 1 and 2 months in V72P10.

Reporting group title	rMenB0
-----------------------	--------

Reporting group description:

Subjects received 1 dose of rMenB+OMV-NZ at 0 month and 3 doses of placebo at 1, 2 and 6 months in V72P10.

Reporting group title	rMenB02
-----------------------	---------

Reporting group description:

Subjects received 2 doses each of rMenB+OMV-NZ at 0 and 2 months and placebo at 1 and 6 months in V72P10.

Reporting group title	Naive
-----------------------	-------

Reporting group description:

Subjects did not receive any vaccination and of similar age to the follow-on subjects from V72P10.

Reporting group title	rMenB012
-----------------------	----------

Reporting group description:

Subjects received 3 doses of rMenB+OMV-NZ at 0, 1 and 2 months and placebo at 6 months in V72P10.

Reporting group title	rMenB01
-----------------------	---------

Reporting group description:

Subjects received 2 doses each of rMenB+OMV-NZ at 0 and 1 months and placebo at 2 and 6 months in V71P10.

Reporting group title	rMenB6
-----------------------	--------

Reporting group description:

Subjects received 1 dose of rMenB+OMV-NZ at 6 months and 3 doses of placebo at 0, 1 and 2 months in V72P10.

Reporting group title	rMenB016
-----------------------	----------

Reporting group description:

Subjects received 3 doses of rMenB+OMV-NZ at 0, 1 and 6 months and 1 dose of placebo at 2 months in V72P10.

Reporting group title	rMenB026
-----------------------	----------

Reporting group description:

Subjects received 3 doses of rMenB+OMV-NZ at 0, 2 and 6 months and 1 dose of placebo at 1 month in V71P10.

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: All safety analyses were run in the safety population. No Serious Adverse Event occurred.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
