Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 January 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 November 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the long-term safety of GZ/SAR402671 in adult male subjects with Fabry disease who previously completed study ACT13739 (NCT02228460). In this LTS14116 results record, all presentations and summaries include all subjects who received at least 1 dose of investigational medicinal product (IMP) during the ACT13739 study, and all data collected during ACT13739 and LTS14116 studies were included in analyses. As such, overall enrolment for the trial (enrolled per country and per age group) is presented for the previously completed study ACT13739 (refer to below tabular summary). Actual enrolment in LTS14116 study only was 8 subjects (France 1, Poland 1, Russian Federation 1, United Kingdom 1, and United States 4).

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 July 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	United States: 4
Worldwide total number of subjects	11
EEA total number of subjects	6

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects who successfully completed 26 weeks of treatment in prior ACT13739 study (NCT02228460) were eligible to continue their treatment for up to 30 additional months in this extension study LTS14116. Eleven subjects had enrolled and were treated in ACT13739 study, and 9 completed study. Of these 9 subjects, 8 entered extension study.

Pre-assignment

Screening details:

In extension study, subjects continued on same dose regimen they had received in initial study. Two subjects in LTS14116 study completed treatment and did not discontinue early, but were counted as not completed study due to no record of completion.

Period 1

Period 1 title	ACT13739 (Initial Study): 26 Weeks
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	GZ/SAR402671
-----------	--------------

Arm description:

Subjects with Fabry disease received GZ/SAR402671 15 milligrams (mg) once daily orally for 36 months during combined ACT13739/LTS14116 treatment period.

Arm type	Experimental
Investigational medicinal product name	GZ/SAR402671
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

15 mg hard gelatin capsules once daily orally.

Number of subjects in period 1	GZ/SAR402671
Started	11
Completed	9
Not completed	2
Adverse Event	1
Lost to follow-up	1

Period 2

Period 2 title	LTS14116 (Extension Study): 31 Months
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	GZ/SAR402671
------------------	--------------

Arm description:

Subjects received GZ/SAR402671 15 mg once daily orally for 36 months during combined ACT13739/LTS14116 treatment period.

Arm type	Experimental
Investigational medicinal product name	GZ/SAR402671
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

15 mg hard gelatin capsules once daily orally.

Number of subjects in period 2^[1]	GZ/SAR402671
Started	8
Completed	5
Not completed	3
Adverse Event	1
Treatment completed/Study not completed	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Eleven subjects were enrolled and treated in ACT13739 study. Of which 9 subjects completed the study. Out of which, 8 entered the extension study.

Baseline characteristics

Reporting groups

Reporting group title	GZ/SAR402671
-----------------------	--------------

Reporting group description:

Subjects with Fabry disease received GZ/SAR402671 15 milligrams (mg) once daily orally for 36 months during combined ACT13739/LTS14116 treatment period.

Reporting group values	GZ/SAR402671	Total	
Number of subjects	11	11

Primary: Number of Subjects With Treatment Emergent Adverse Events (TEAEs)

End point title	Number of Subjects With Treatment Emergent Adverse Events (TEAEs) ^[1]
End point description:	
Any untoward medical occurrence in a subject who received study drug was considered an adverse event (AE) without regard to possibility of causal relationship with this treatment. TEAEs were defined as AEs that developed or worsened during TEAE period (period from the first administration of study drug in ACT13739 through the last administration of the study drug in the combined ACT13739/LTS14116 treatment period plus 1 month or end of study participation for subject, whichever occurred first). For this analysis, baseline was defined as initial ACT13739 study baseline. Analysis was performed on safety population: all subjects who received at least 1 dose of IMP during the ACT13739 study. All data collected during ACT13739 and LTS14116 studies were included in analysis.	
End point type	Primary
End point timeframe:	
From baseline of ACT13739 study up to 37 months post-ACT13739 baseline	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, no statistical analysis is provided.

End point values	GZ/SAR402671

End point description:	
Change from baseline in plasma GL-3 was obtained by subtracting baseline value from post-baseline value at Weeks 26, 52, 104 and 156. Concentration of Lyso-GL-3 in plasma was determined using a validated LC-MS/MS method. For this analysis, baseline was defined as initial ACT13739 study baseline. Analysis was performed on full analysis set: all subjects who received at least 1 dose of IMP during the ACT13739 study. All data collected during ACT13739 and LTS14116 studies were included in analysis. Here, 'n' signifies subjects with available data for specified category.

End point title	Summary of Shifts From Baseline in Skin GL-3 Score in Superficial Capillary Endothelial Cells Over Time: Number of Subjects in Categories of Shift in GL-3 Score
-----------------	--

End point description:

Skin biopsies were done to score GL-3 accumulation/inclusions by light microscopy. Three independent pathologists scored GL-3 clearance by using an inclusion severity score of 0 (none/trace), 1 (mild), 2 (moderate), and 3 (severe), where higher score indicated more severe condition. A single score per subject per time point was derived by taking score rated by a majority of pathologists; if a majority score could not be derived, median score was used. Data were summarised and reported in terms of number of subjects with shift from baseline GL-3 score to Weeks 12, 26, 52 and 156 GL-3 score. Shift to lower score from baseline indicated less severe condition at that respective time point. Baseline was defined as initial ACT13739 study baseline. Analysed on full analysis set: all subject who received at least 1 dose of IMP during ACT13739 study. All data collected during ACT13739 and LTS14116 studies were analysed. Secondary: Gastrointestinal Symptoms: Number of Subjects With Abdominal Distension at Baseline and Weeks 2, 4, 8, 12, 18, 26, 52, 104 and 156

End point title	Gastrointestinal Symptoms: Number of Subjects With Abdominal Distension at Baseline and Weeks 2, 4, 8, 12, 18, 26, 52, 104 and 156
-----------------	--

End point description:

Subjects assessed their GI symptoms (abdominal pain, abdominal distention, bowel movements) by completing a questionnaire (modified version of the inflammatory bowel severity scoring system). Subjects were asked to report the presence of abdominal distention in past 10 days (before each of the specified time points). Subjects answered the question: "Do you currently suffer from abdominal distension (bloating, swelling or tight tummy)? [Yes/No]". For this analysis, baseline was defined as initial ACT13739 study baseline. Analysis was performed on full analysis set: all subjects who received at least 1 dose of IMP during the ACT13739 study. All data collected during ACT13739 and LTS14116 studies were included in analysis. Here, 'n' signifies subjects with available data for specified category.

Secondary: Gastrointestinal Symptoms: Abdominal Distension Severity Score at Baseline and Weeks 2, 4, 8, 12, 18, 26 and 156

End point title	Gastrointestinal Symptoms: Abdominal Distension Severity Score at Baseline and Weeks 2, 4, 8, 12, 18, 26 and 156
-----------------	--

End point description:

Subjects assessed their GI symptoms (abdominal pain, abdominal distention, bowel movements) by completing a questionnaire (modified version of the inflammatory bowel severity scoring system). Subjects were asked to mark the severity of the abdominal distension in past 10 days (before each of the specified time points) on a VAS. The scale ranged from 0% (no distention) to 100% (very severe), where higher score indicated more severity. For this analysis, baseline was defined as initial ACT13739 study baseline. Analysis was performed on full analysis set: all subjects who received at least 1 dose of IMP during the ACT13739 study. All data collected during ACT13739 and LTS14116 studies were included in analysis. Here, 'n' signifies subjects with available data for specified category. The SD can only be calculated when there are more than 1 subject with data available, and "99999" is entered when SD cannot be calculated.

Secondary: Change From Baseline in Beck Depression Inventory (BDI) Total Score at Weeks 26, 104 and 156

End point title	Change From Baseline in Beck Depression Inventory (BDI) Total Score at Weeks 26, 104 and 156
-----------------	--

End point description:

The BDI-II Scale was a 21-item scoring tool which measures the existence and severity of symptoms of depression. Each of the 21 items on BDI-II tool represent a depressive symptom. Each symptoms were scored on a 4-point scale of 0 to 3 (0=symptom not present); (3=symptom very intense). Scores for each symptom were added up to obtain the total scores for all 21 items, which were interpreted as follows: Scores of 0-13: minimal depression; 14-19: mild depression; 20-28: moderate depression and 29-63: severe depression, where higher scores indicated more depression. For this analysis, baseline was defined as initial ACT13739 study baseline. Analysis was performed on full analysis set: all subjects who received at least 1 dose of IMP during the ACT13739 study. All data collected during ACT13739 and LTS14116 studies were included in analysis. Here, 'n' signifies subjects with available data for specified category.

End point type	Secondary

Secondary: Chitotriosidase (Chit1) Plasma Concentration Levels at Weeks 52, 104, 156 and 160 (End of Treatment Follow-up)

End point title	Chitotriosidase (Chit1) Plasma Concentration Levels at Weeks 52, 104, 156 and 160 (End of Treatment Follow-up)
-----------------	--

End point description:

Plasma concentrations of Chit1 over time were determined using mass spectrometry (MS)-based assay. For the analysis, 52 ng/mL was considered as the lower limit of quantification. Although identified in protocol as a secondary endpoint, plasma Chit1 is also an exploratory measure. Only LTS14116 timepoints were analysed and are presented. Data summarised are the measured values at each time point (not change from baseline). Here, measured value '0.000' denotes no chitotriosidase detected in plasma for the 5 subjects at Week 156 reported by laboratory for all evaluable subjects. Analysis population included subjects in LTS14116 study with evaluable plasma Chit1 data. Only data collected during LTS14116 study were included in analysis. Here, 'number of subjects analysed' = subjects evaluable for this endpoint and 'n' = subjects with available data for each specified category.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From baseline of ACT13739 study up to 37 months post-ACT13739 baseline

Adverse event reporting additional description:

Reported AEs were TEAEs, defined as AEs that developed/worsened during TEAE period (period from 1st administration of study drug in ACT13739 through last administration of study drug in the combined ACT13739/LTS14116 treatment period plus 1 month or end of study participation for subject, whichever occurs first). Analysed on safety population.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 May 2015	<ul style="list-style-type: none">•Expansion of contraception requirements following the end of treatment period included 15 days after the subject's last treatment with IMP•Photographs at Month 30 ophthalmology exam were included for all subjects•Removal of Beck Depression Inventory- II (BDI-II assessment was not available and removed)•Update to the bioanalytical standard operating procedure (SOP) for the analysis of plasma GZ/SAR402671 concentrations•The Pharmacodynamics (PD) was measured in secondary endpoints included additional language to endpoint: exploratory blood and urine biomarkers including, but not limited to high sensitivity cardiac troponin T and podocyturia; addition to the study flow chart to include this information was also added•Addition to exploratory efficacy endpoint included urinary albumin and protein measurements•Changes to the Graphical Study Design Chart included "OR" for the ACT13739 dose levels•Grammatical errors were also corrected•Change in the language on pregnancy reporting as an adverse event (AE) to be consistent with SOP to keep consistency between protocol sections regarding pregnancy reporting as an AEs of special interest by changing the language as to report pregnancy of participating subject's female partner as an AE reported on electronic case report form AE form in addition to the additional pregnancy form.
14 January 2016	<ul style="list-style-type: none">•Addition of optional examination of globotriaosylceramide in skin biopsies at month 6 for all subjects to the one already planned at Month 30 or at early withdrawal which were not limited to superficial capillary endothelium•Addition of language regarding future use of samples•Addition of language regarding the "external genitalia" examination to the Physical Exam section of the amended protocol•Addition of language regarding subject withdrawal•Expansion of contraception requirement following the end of the treatment period•Change to text describing measures to evaluate the exploratory efficacy of the IMP. The study further evaluated changes in the GL-3 scores by light microscopy in skin biopsy, patient reported outcome (PRO) questionnaires, and urinary albumin and protein (ACR and PCR)•Addition to text regarding study treatments adding that the as an alternative to between clinical visit, the study drug might be supplied from the site to the subject via a sponsor-approved courier company where allowed by local regulations and approved by ethics committee, sponsor, and the subject.
19 September 2016	<ul style="list-style-type: none">•BDI-II questionnaire to PRO to monitor the mood status for subjects and appropriate reference was added•Addition of chitotriosidase plasma activity and genotyping as an exploratory biomarker in the secondary endpoints and in specific parameters of PD•Expansion of contraception requirements following the end of treatment period from 6 weeks to 90 days after the subject's last treatment with IMP•Minor changes to replace phrase tense from "currently participating" to "that participated" in the Investigator/Trial Location information•Grammatical errors were also corrected•Footnote text on the study flow chart was changed to include the following: BDI-II is part of protocol amendment #3 and were conducted starting at the first subject visit after amendment approval and thereafter in subsequent visits.

10 November 2017	<ul style="list-style-type: none"> •Changed the subject's post treatment follow up phone call to a site visit in order to collect disease biomarkers in the urine and blood, and pharmacokinetic (PK) data •Addition of PKs assessment in early withdrawal visit and revision to footnote to correct a previous omission •Addition of in other endpoints PKs text for sampling time: "PK sample during the early withdrawal (if applicable)and post treatment follow up visit were collected at any time during the visit" •Correction of text within the secondary endpoint: "monosialodihexosylganglioside" to replace "GM3 ganglioside (GM3)" and correction to footnote on the study flow chart, removal of reference to GM3 ganglioside (GM3) were made throughout the protocol •Changes to the Graphical Study Design Chart included End of treatment Follow up Visit •Additions to the duration of study participations for each subject included the following: "Post-treatment follow up: 1 month (\pm 7 days). Subjects who started commercial enzyme replacement therapy, investigational or any other Fabry disease treatment within the 1-month (\pm 7 days) follow up period were not contacted considered for follow up assessments" •Grammatical errors were also corrected •Addition of "Renin-Angiotensin-Aldosterone System" to abbreviation (RAAS) listed in heading text •Correction to Estimated sample blood volumes including the sample number and volume per study.
