

Clinical trial results:

Efficacy and mechanism of action of gabapentin for the management of chronic pelvic pain in women: The GaPP2 RCT

Summary

EudraCT number	2014-005035-13
Trial protocol	GB
Global end of trial date	13 November 2019

Results information

Result version number	v1 (current)
This version publication date	31 March 2021
First version publication date	31 March 2021

Trial information

Trial identification

Sponsor protocol code	GaPP2
-----------------------	-------

Additional study identifiers

ISRCTN number	ISRCTN77451762
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 November 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 July 2019
Global end of trial reached?	Yes
Global end of trial date	13 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To test if women with chronic pelvic pain (where no cause for their pain has been found) can be safely treated with gabapentin to gain good pain relief.

Protection of trial subjects:

A Data Monitoring Committee was appointed and met six times throughout the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 September 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 306
Worldwide total number of subjects	306
EEA total number of subjects	306

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	306
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

We recruited 306 women over a period from November 2015 to March 2019.
Participants were recruited from 39 UK hospital centres.

Pre-assignment

Screening details:

Participants were referred to the research team by their clinical team. Participants entered a screening phase where they were required to return their worst and average pain scores on a numerical scale weekly for four weeks. At least two of the worst NRS pain scores needed to be ≥ 4 in order for their pain to be considered sufficient for trial.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

300mg starting dose titrated up to 2700mg daily over four weeks (placebo dose equivalent). Maximum tolerated dose maintained for 12 weeks.

Arm title	Active
------------------	--------

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Gabapentin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

300mg starting dose titrated up to 2700mg daily over four weeks. Maximum tolerated dose maintained for 12 weeks.

Number of subjects in period 1	Placebo	Active
Started	153	153
Completed	153	153

Period 2

Period 2 title	End of study
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Anaemia			
subjects affected / exposed	1 / 153 (0.65%)	0 / 153 (0.00%)	
occurrences (all)	1	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 August 2015	<p>1. We have included more details with regard to a number of the objectives and the criteria for entry to the trial. These are indicated in track changes within the protocol.</p> <p>2. We have also added an additional embedded pharmacogenetic substudy to investigate the influence of genetic variation on gabapentin efficacy and potential intolerance, and the potential for stratification of patients with likely drug response based on genetic profiles.</p>
22 February 2016	<p>Insertion of ISCTRN and funding references</p> <p>Clarification of unblinding procedures</p> <p>Update of contact details</p> <p>Removal of analgesic use while in study details to reflect the analgesic use may reduce. This was written in error in the original protocol as we hope that analgesic use will decrease over the course of the study for some of the participants.</p> <p>Removal of heat stimulus from fMRI process. The thermal equipment was temperamental in the mock scans we ran and looking at the pilot data the pin pricks gave us the desired effect on the brain so it was felt that the thermal stimulus was unnecessary and prolonged the scanning process.</p> <p>Change of fMRI PIS to remove thermal stimuli</p> <p>Addition of pt emergency card - to identify participants in case of emergencies.</p>
14 March 2016	Changes to the SmPC for gabapentin 300 mgs
03 May 2016	Amendment to emergency card
28 February 2017	<p>Addition of a healthy volunteer arm to the fMRI substudy.</p> <p>On monitoring the first patients at each site, certain deviations were noted. These were in the timing of visit 5. The last text pain score is collected at the end of week 16 and therefore unblinding cannot take place during this week so for clarity this has been changed to week 17.</p> <p>Participants increase and decrease their doses of gabapentin throughout the course of the trial which reflects real life situations and therefore these fluctuations will be captured but will not be seen as a deviation.</p> <p>The use of rescue analgesia will be restricted only by the SmPC and not by the protocol as these did not reflect common clinical practices.</p> <p>SmPC for gabapentin 300mgs has been updated. RSI information has changed. All sites notified of the change. The annual reporting period is coming to an end and therefore the SmPC can now be changed.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
------	--------------	--------------

15 December 2017	<p>In December 2017, we had to stop randomising participants to treatment while we waited for the outcome of our costed extension request.</p> <p>In February 2018, we were informed that our costed extension had been granted. We instructed Sharp Services to produce our third campaign of IMP shortly after this date, but the factory had to close in March due to issues with their production unit.</p>	16 April 2018
------------------	---	---------------

Notes:

Limitations and caveats
