

Clinical trial results:

A Single-Arm, Multicenter, Phase 1b Study with an Expansion Cohort to Evaluate Safety and Efficacy of Necitumumab in Combination with Abemaciclib in Treatment of Patients with Stage IV Non-Small Cell Lung Cancer (NSCLC)

Summary

EudraCT number	2014-005042-21
Trial protocol	BE ES
Global end of trial date	28 May 2019

Results information

Result version number	v1
This version publication date	07 June 2020
First version publication date	07 June 2020

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 May 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 May 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is medical research evaluating the safety and efficacy of two new medicines (necitumumab and abemaciclib), administered in combination in participants affected by a defined type of advanced lung cancer (stage IV non-small-cell lung cancer).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 June 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	France: 52
Country: Number of subjects enrolled	Spain: 3
Worldwide total number of subjects	66
EEA total number of subjects	66

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	40
From 65 to 84 years	25
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

No Text Available

Pre-assignment

Screening details:

The study has 2 parts (Part A and Part B). Part A is a dose-escalation study to determine the recommended dose of abemaciclib in combination with necitumumab Part B (expansion cohort). Completers completed the 2 cycles, with required assessment, had progressive disease or died due to any cause, alive and on study at conclusion but off treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)

Arm description:

Part A: Necitumumab 800 milligram (mg) was administered IV on Days 1 and 8, followed by abemaciclib 100 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Arm type	Experimental
Investigational medicinal product name	Necitumumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Necitumumab 800 milligram (mg) was administered intravenously (IV) on Days 1 and 8.

Investigational medicinal product name	Abemaciclib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

abemaciclib 100 mg given orally every 12 hours on Days 1 to 21.

Arm title	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)
------------------	--

Arm description:

Part A: Necitumumab 800 mg administered intravenously (IV) on Days 1 and 8, followed by abemaciclib 150 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Part B: (expansion cohort): Necitumumab 800 mg administered IV on Days 1 and 8, followed by abemaciclib 150 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Necitumumab

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[4] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[5] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[6] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

[7] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The number of participants at each milestone is a subset analysis population to the overall number of participants in the arm.

Baseline characteristics

Reporting groups

Reporting group title	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)
-----------------------	--

Reporting group description:

Part A: Necitumumab 800 milligram (mg) was administered IV on Days 1 and 8, followed by abemaciclib 100 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Reporting group title	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)
-----------------------	--

Reporting group description:

Part A: Necitumumab 800 mg administered intravenously (IV) on Days 1 and 8, followed by abemaciclib 150 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Part B: (expansion cohort): Necitumumab 800 mg administered IV on Days 1 and 8, followed by abemaciclib 150 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Reporting group title	Cohort 3 (Necitumumab 800 mg + Abemaciclib 200 mg)
-----------------------	--

Reporting group description:

Part A: Necitumumab 800 mg was administered IV on Days 1 and 8, followed by abemaciclib 200 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.) Treatment may continue until discontinuation criterion is met.

Subject analysis set description:

Part A: Necitumumab 800 mg was administered IV on Days 1 and 8, followed by abemaciclib 150 mg given orally every 12 hours on Days 1 to 21. (21 day cycles.)

Primary: Part A: Number of Participants with Abemaciclib Dose Limiting Toxicities (DLTs)

End point title	Part A: Number of Participants with Abemaciclib Dose Limiting Toxicities (DLTs) ^[1]
-----------------	--

End point description:

A DLT was defined as one of the following adverse events (AEs), occurring in Cycle 1 if considered to be definitely, probably, or possibly related to necitumumab and abemaciclib: Grade 3 or 4 nonhematologic toxicity according to the National Cancer Institute Common Terminology Criteria for Adverse Events Version 4.0 (NCI-CTCAE v4.0), except for nausea, vomiting, diarrhea, or electrolyte disturbance. Grade 3 or 4 nausea, vomiting, or diarrhea that persists more than 2 days despite maximal supportive intervention. Grade 3 thrombocytopenia with bleeding requiring transfusion. Grade 4 thrombocytopenia with or without bleeding. Grade 4 neutropenia that persists more than 5 days.

End point type	Primary
----------------	---------

End point timeframe:

Baseline through Cycle 1 (Up to 21 Days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: DLT endpoint was summarized using descriptive statistics.

End point values	Cohort 3 (Necitumumab 800 mg + Abemaciclib 200 mg)	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	3 ^[2]	6 ^[3]	6 ^[4]	
Units: participants	0	1	3	

Notes:

[2] - All participants who received at least one dose of study drug and had evaluable DLTs.

[3] - All participants who received at least one dose of study drug and had evaluable DLTs.

[4] - All participants who received at least one dose of study drug and had evaluable DLTs.

Statistical analyses

No statistical analyses for this end point

Primary: Progression Free Survival (PFS) Rate

End point title	Progression Free Survival (PFS) Rate ^[5]
-----------------	---

End point description:

PFS defined as time from baseline until first radiographic documentation of measured progressive disease (PD) defined by response evaluation criteria in solid tumors (RECIST) v1.1 or death from any cause. PD was at least 20% increase in sum of diameters of target lesions with reference being smallest sum on study and an absolute increase of at least 5 millimeter (mm) or unequivocal progression of non-target lesions, or 1 or more new lesions. If participant does not have complete baseline disease assessment, PFS time censored at date of randomization, regardless of whether or not objectively

determined disease progression or death observed for participant. If participant was not known to have died or have objective progression as of data inclusion cutoff date for analysis, the PFS time censored at last adequate tumor assessment date. The use of new anticancer therapy prior to occurrence of PD resulted in censoring at the date of last radiographic assessment prior to initiation of new therapy.

End point type	Primary
End point timeframe:	
Baseline to measured progressive disease or death due to any cause (3 Months)	

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: PFS endpoint was summarized using descriptive statistics.

End point values	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)	Cohort 3 (Necitumumab 800 mg + Abemaciclib 200 mg)	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	3 ^[6]	57 ^[7]	6 ^[8]	
Units: Months				
median (confidence interval 95%)	66.7 (5.4 to 94.5)	32.3 (20.4 to 44.8)	50.0 (11.1 to 80.4)	

Notes:

[6] - All enrolled participants who received at least one dose of study drug and had evaluable PFS data.

[7] - All enrolled participants who received at least one dose of study drug and had evaluable PFS data.

[8] - All enrolled participants who received at least one dose of study drug and had evaluable PFS data.

Secondary: Percentage of Participants Who Achieve Best Overall Tumor Response of Complete or Partial Response (Objective Response Rate [ORR])

End point title	Percentage of Participants Who Achieve Best Overall Tumor Response of Complete or Partial Response (Objective Response Rate [ORR])
-----------------	--

End point description:

ORR was the percentage of participants achieving a best overall response of complete response (CR) or partial response (PR) as per Response Evaluation Criteria in Solid Tumors (RECIST) v1.1. CR defined as the disappearance of all target and non-target lesions and no appearance of new lesions. PR defined as at least a 30% decrease in the sum of the longest diameters (LD) of target lesions (taking as reference the baseline sum LD), no progression of nontarget lesions, and no appearance of new lesions. PD was at least a 20% increase in the sum of the diameters of target lesions, with reference being the smallest sum on study and an absolute increase of at least 5 mm, or unequivocal progression of non-target lesions, or 1 or more new lesions. Confidence intervals are based on Clopper-Pearson method.

End point type	Secondary

Secondary: Percentage of Participants With a Best Overall Response of Complete Response (CR), Partial Response (PR), and Stable Disease (SD) (Disease Control Rate [DCR])

End point title	Percentage of Participants With a Best Overall Response of Complete Response (CR), Partial Response (PR), and Stable Disease (SD) (Disease Control Rate [DCR])
-----------------	--

End point description:

Disease Control Rate (DCR) is defined as the percentage of participants achieving a best overall response of stable disease (SD), PR, or CR. DCR used the same denominator as defined in ORR. Among participants counted in the denominator, the numerator counted those with a confirmed best tumor response of SD, PR, or CR per RECIST v1.1. Confidence intervals are based on Clopper-Pearson method.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline to measured progressive disease or start of new anti-cancer therapy (up to 21 months)

End point values	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)	Cohort 3 (Necitumumab 800 mg + Abemaciclib 200 mg)	Total Enrolled Participants (Necitumumab + Abemaciclib)
Subject group type	Reporting group	Reporting group	Reporting group	Subject analysis set
Number of subjects analysed	3 ^[21]	57 ^[22]	6 ^[23]	66
Units: percentage of participants				
number (confidence interval 95%)	100 (29.2 to 100.0)	47.4 (34.0 to 61.0)	66.7 (22.3 to 95.7)	51.5 (38.9 to 64.0)

Notes:

[21] - All enrolled participants who received at least one dose of study drug and had evaluable ORR data.

[22] - All enrolled participants who received at least one dose of study drug and had evaluable ORR data.

[23] - All enrolled participants who received at least one dose of study drug and had evaluable ORR data.

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival

End point title	Overall Survival
-----------------	------------------

End point description:

Overall survival (OS) is defined as the time from the date of study enrollment to the date of death from any cause. For each participant who is not known to have died as of the data -inclusion cutoff date for a particular analysis, OS was censored for that analysis at the last known alive date.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline to date of death from any cause (24 Months)

End point values	Cohort 1 (Necitumumab 800 mg + Abemaciclib 100 mg)	Cohort 2 (Necitumumab 800 mg + Abemaciclib 150 mg)	Cohort 3 (Necitumumab 800 mg + Abemaciclib 200 mg)	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	3 ^[24]	57 ^[25]	6 ^[26]	
Units: Months				
median (confidence interval 95%)	9999 (18.20 to 9999)	6.93 (4.96 to 12.85)	13.45 (1.31 to 18.53)	

Notes:

[24] - 9999 = NA due to 95% Confidence Interval (CI) had not matured yet and median was not calculable.

[25] - All enrolled participants who received at least one dose of study drug and had evaluable OS data.

[26] - All enrolled participants who received at least one dose of study drug and had evaluable OS data.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This event is gender specific, only occurring in male or female subjects. The number of subjects exposed has been adjusted accordingly.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 May 2016	Protocol amendment (b) overall changes are as follows: <ul style="list-style-type: none">• Interim efficacy analyses (as needed) have been added to aid in the planning of future trials.• Specific adverse events of necitumumab have been amended.• The infusion time for necitumumab has been updated to 60 minutes.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
