Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	03 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main purpose of this study was to demonstrate superiority with regards to overall survival of Avelumab versus Docetaxel in subjects with programmed death ligand 1 (PD-L1) positive, non-small cell lung cancer (NSCLC) after failure of a platinum-based doublet.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 March 2015
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Country: Number of subjects enrolled	United States: 18
Worldwide total number of subjects	792
EEA total number of subjects	335

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	426
From 65 to 84 years	361
85 years and over	5

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

First subject signed informed consent: 24 Mar 2015, Clinical data cut-off: 04 March 2019.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Avelumab

Arm description:

Subjects received 10 milligram per kilogram (mg/kg) of avelumab as a 1-hour intravenous infusion once every 2 weeks until confirmed disease progression, significant clinical deterioration, unacceptable toxicity, or any criterion for withdrawal from the study or Investigational Medicinal Product (IMP) as defined in the study protocol was fulfilled.

Arm type	Experimental
Investigational medicinal product name	Avelumab
Investigational medicinal product code	MSB0010718C
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous bolus use

Dosage and administration details:

Subjects received intravenous infusion of avelumab at a dose of 10 mg/kg over the duration of 1 hour once every 2 weeks until confirmed disease progression.

Arm title	Docetaxel
------------------	-----------

Arm description:

Subjects received 75 mg per square meter (m^2) (per label) of docetaxel by intravenous infusion once every 3 weeks until confirmed disease progression, significant clinical deterioration, unacceptable toxicity, or any criterion for withdrawal from the study or Investigational Medicinal Product (IMP) as defined in the study protocol was fulfilled.

Arm type	Experimental
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous bolus use

Dosage and administration details:

Subjects received 75 mg per square meter (m^2) (per label) of docetaxel by intravenous infusion once every 3 weeks until confirmed disease progression.

Number of subjects in period 1	Avelumab	Docetaxel
Started	396	396
Treated	393	365
Completed	393	365
Not completed	3	31
Subjects randomized but not treated	3	31

Primary: Overall Survival (OS) Time in Programmed Death Ligand 1 (PD-L1) + Full Analysis Set Population (FAS)

End point title	Overall Survival (OS) Time in Programmed Death Ligand 1 (PD-L1) + Full Analysis Set Population (FAS)
End point description: The OS time was defined as the time from randomization to the date of death. The subjects who were still alive at the time of data analysis or who were lost to follow-up OS time was censored at the last recorded date that the subjects was known to be alive before the data cutoff date. OS was measured using Kaplan-Meier (KM) estimates. PD-L1+ FAS included all PD-L1+ tumor subjects who were randomly assigned to trial treatment. The PD-L1+ subjects were with greater than or equal to (\geq) 1 percentage (%) of tumor cells with $\geq 1+$ positive membrane staining intensity for PD-L1 protein.

Secondary: Progression-Free Survival (PFS) Time in PD-L1+ Full Analysis Set Population

End point title	Progression-Free Survival (PFS) Time in PD-L1+ Full Analysis Set Population
-----------------	---

End point description:

PFS was defined as the time from date of randomization until date of the first documentation of progressive disease (PD) or death due to any cause in the absence of documented PD, whichever occurs first. PFS was assessed as per Response Evaluation Criteria in Solid Tumors version 1.1 (RECIST v1.1) as adjudicated by independent endpoint review committee (IERC). PD was defined as at least a 20 percent (%) increase in the sum of longest diameter (SLD), taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions and unequivocal progression of non-target lesions. PFS was measured using Kaplan-Meier (KM) estimates. PD-L1+ FAS included all PD-L1+ tumor subjects who were randomly assigned to trial treatment. PD-L1+ FAS included all PD-L1+ tumor subjects who were randomly assigned to trial treatment. The PD-L1+ subjects were with ≥ 1 percentage of tumor cells with $\geq 1+$ positive membrane staining intensity for PD-L1 protein.

Secondary: Number of Subjects with Confirmed Best Overall Response (BOR) as Assessed by an Independent Endpoint Review Committee (IERC) in Full Analysis Set Population

End point title	Number of Subjects with Confirmed Best Overall Response (BOR) as Assessed by an Independent Endpoint Review Committee (IERC) in Full Analysis Set Population
-----------------	--

End point description:

Confirmed BOR: best response of any of the complete response (CR), partial response (PR), stable disease (SD) and progressive disease (PD) recorded from the date of randomization until disease progression or recurrence (taking the smallest measurement recorded since the start of treatment as reference). CR: Disappearance of all evidence of target & non-target lesions. PR: At least 30% reduction from baseline in the sum of the longest diameter (SLD) of all lesions. SD: Neither sufficient increase to qualify for PD nor sufficient shrinkage to qualify for PR. PD: a 20% increase in the SLD, taking as reference the smallest SLD recorded from baseline or the appearance of 1 or more new lesions & unequivocal progression of non-target lesions. Number of subjects with best overall response in each category (CR, PR, SD, PD) was reported. FAS was used.

Secondary: Change From Baseline in European Quality of Life 5-dimensions (EQ-5D-5L) Health Outcome Questionnaire Through Composite Index Score at End of Treatment (EOT)

End point title	Change From Baseline in European Quality of Life 5-dimensions (EQ-5D-5L) Health Outcome Questionnaire Through Composite Index Score at End of Treatment (EOT)
-----------------	---

End point description:

The EQ-5D-5L health outcome questionnaire was a measure of health status that provides a simple descriptive profile and a single index value. The EQ-5D-5L defined health in terms of mobility, self-care, usual activities, pain/discomfort and anxiety/depression. The 5 items were combined to generate health profiles. These profiles were converted to a continuous single index score. The lowest possible score was -0.59 (unable to walk, unable to self-care, unable to do usual activities, extreme pain or discomfort, extreme anxiety or depression) and the highest score was 1.00 (no problems in all 5 dimensions). Health-related quality of life (HRQoL) analysis set was a subset of the FAS and includes all FAS subjects who had 1 baseline HRQoL assessment and at least 1 post-baseline HRQoL questionnaire completed. Here, "number of subjects analyzed" signified the subjects analyzed in this endpoint.

End point title	Change From Baseline in European Quality of Life 5-dimensions (EQ-5D-5L) Health Outcome Questionnaire Through Visual Analogue Scale (VAS) at End of Treatment (EOT)
-----------------	---

End point description:

EQ-5D-5L was comprised of the following 5 participant-reported dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Each dimension had 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. The responses were used to derive overall score using a visual analog scale (VAS) that ranged from 0 to 100 millimeter (mm), where 0 (worst health you can imagine) and 100 (best health you can imagine). Health-related quality of life

(HRQoL) analysis set was a subset of the FAS and includes all FAS subjects who had 1 baseline HRQoL assessment and at least 1 post-baseline HRQoL questionnaire completed. Here, "Number of subjects analyzed" signified the subjects analyzed in this endpoint.

End point title	Change From Baseline in European Organization for the Research and Treatment of Cancer Quality of Life (EORTC QLQ-C30) Global Health Status at End of Treatment (EOT)
-----------------	---

End point description:

EORTC QLQ-C30 was a 30-question tool used to assess the overall quality of life (QoL) in cancer subjects. It consisted of 15 domains: 1 global health status (GHS) scale, 5 functional scales (Physical, role, cognitive, emotional, social), and 9 symptom scales/items (Fatigue, nausea and vomiting, pain, dyspnea, sleep disturbance, appetite loss, constipation, diarrhea, financial impact). The EORTC QLQ-C30 GHS/QoL score ranged from 0 to 100, where 0 (very poor physical condition and QoL) and 100 (excellent overall physical condition and QoL). Health-related quality of life (HRQoL) analysis set was a subset of the FAS and includes all FAS subjects who had 1 baseline HRQoL assessment and at least 1 post-baseline HRQoL questionnaire completed. Here, "Number of subjects analyzed" signified the subjects analyzed in this endpoint.

End point title	Change from Baseline in European Organization for the Research and Treatment of Cancer Quality of Life Questionnaire Lung Cancer 13 (EORTC QLQ-LC13) at End of Treatment (EOT)
-----------------	--

End point description:

EORTC QLQ-LC13 consisted of 13 questions relating to disease symptoms specific to lung cancer and treatment side effects typical of treatment with chemotherapy and radiotherapy. The EORTC QLQ-LC13 module generated one multiple-item scale assessing dyspnea, coughing, hemoptysis, sore mouth, dysphagia, neuropathy, alopecia, pain in chest, pain in arms or shoulder and pain in other parts. Score range: 0 (no burden of symptom domain or single symptom item) to 100 (highest burden of symptoms for symptom domains and single items). Health-related quality of life (HRQoL) analysis set was a subset of the FAS and includes all FAS subjects who had 1 baseline HRQoL assessment and at least 1 post-baseline HRQoL questionnaire completed. Here, "n" signified those subjects who were evaluable for the specified category.

Pain in Arm or Shoulder: (n = 172, 197)	5.62 (± 28.852)	0.85 (± 29.439)		
Pain in Other Parts: (n = 171, 197)	8.77 (± 34.410)	6.60 (± 30.978)		

Statistical analyses

Secondary: Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Treatment Emergent Serious Adverse Events (TESAEs), Drug Related Treatment Emergent Adverse Events and Treatment Emergent Adverse Events Leading to Death

End point title	Number of Subjects with Treatment Emergent Adverse Events (TEAEs), Treatment Emergent Serious Adverse Events (TESAEs), Drug Related Treatment Emergent Adverse Events and Treatment Emergent Adverse Events Leading to Death
-----------------	--

End point description:

An Adverse event (AE) was defined as any unfavorable and unintended sign (including clinically significant abnormal laboratory, vital signs and 12-lead Electrocardiogram findings), symptom, or disease temporally associated with the use of study drug or worsening of pre-existing medical condition, whether or not related to study drug. A serious adverse event (SAE) was an AE that resulted in any of the following outcomes: death; life threatening; persistent/significant disability/incapacity; initial or prolonged in subject hospitalization; congenital anomaly/birth defect or was otherwise considered medically important. Treatment-emergent events between first dose of study drug that were absent before treatment or that worsened relative to pre-treatment state up to 30 days after last administration. TEAEs included both Serious TEAEs and non-serious TEAEs. Safety analysis set included all subjects who were administered at least 1 dose of the Investigational Medicinal Product.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from date of randomization up to 1420 days

End point values	Avelumab	Docetaxel		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	393	365		
Units: subjects				
TEAEs	375	346		
TESAEs	167	145		
Drug Related TEAEs	252	313		
TEAEs Leading to Death	64	51

Secondary: Number of Subjects with Treatment Emergent Adverse Events (TEAEs) by Severity

End point title	Number of Subjects with Treatment Emergent Adverse Events (TEAEs) by Severity
-----------------	---

End point description:

Treatment Emergent Adverse Events were graded as per National Cancer Institute Common Terminology Criteria for Adverse Experience version 4.03 (NCI-CTCAE v 4.03). Grade 3 refers to severe or medically significant but not immediately life-threatening; hospitalization or prolongation of hospitalization indicated; disabling; limiting self-care and Activity of daily living (ADL), Grade 4 refers to Life-threatening consequences; where urgent intervention indicated, Grade 5 refers to the death related to adverse event. Safety analysis set included all subjects who were administered at least 1 dose of the Investigational Medicinal Product.

Secondary: Number of Subjects with Eastern Cooperative Oncology Group (ECOG) Performance: Baseline Score vs. Worst Post-baseline Score

End point title	Number of Subjects with Eastern Cooperative Oncology Group (ECOG) Performance: Baseline Score vs. Worst Post-baseline Score
-----------------	---

End point description:

ECOG performance status measured to assess subject's performance status on a scale of 0 to 5, where 0 = Fully active, able to carry on all pre-disease activities without restriction; 1 = Restricted in physically strenuous activity, ambulatory and able to carry out light or sedentary work; 2 = Ambulatory and capable of all selfcare but unable to carry out any work activities; 3 = Capable of only limited self-care, confined to bed/chair for more than 50 percent of waking hours; 4 = Completely disabled, cannot carry on any self-care, totally confined to bed/chair; 5 = dead. The subjects with missing worst post baseline score were also reported. ECOG performance status was reported in terms of number of subjects with Baseline value vs. worst post-baseline value (i.e. highest score) combination. Safety analysis set included all subjects who were administered at least 1 dose of the Investigational Medicinal Product.

End point type	Secondary

Secondary: Number of Subjects with Positive Anti-Drug Antibodies (ADAs) and Neutralizing Antibodies (NABs) for Avelumab

End point title	Number of Subjects with Positive Anti-Drug Antibodies (ADAs) and Neutralizing Antibodies (NABs) for Avelumab ^[1]
-----------------	---

End point description:

Serum samples were analyzed by a validated electrochemiluminescence immunoassay to detect the presence of antidrug antibodies (ADA). Samples that screened positive were subsequently tested in a confirmatory assay. Number of subjects with ADA or nAb positive results for Avelumab were reported. Full analysis set (FAS) included all subjects who were randomized to study. Here, "Number of Subjects Analyzed" signified subjects with at least one valid ADA result at any time point.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from date of randomization up to 1420 days

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint was evaluated for Avelumab arm only.

End point values	Avelumab			
Subject group type	Reporting group			
Number of subjects analysed	388

Reporting groups

Reporting group title	Docetaxel
-----------------------	-----------

Reporting group description:

Subjects received 75 mg per square meter (m²) (per label) of docetaxel by intravenous infusion once every 3 weeks until confirmed disease progression, significant clinical deterioration, unacceptable toxicity, or any criterion for withdrawal from the study or Investigational Medicinal Product (IMP) as defined in the study protocol was fulfilled.

Reporting group title	Avelumab
-----------------------	----------

Reporting group description:

Subjects received 10 milligram per kilogram (mg/kg) of avelumab as a 1-hour intravenous infusion once every 2 weeks until confirmed disease progression, significant clinical deterioration, unacceptable toxicity, or any criterion for withdrawal from the study or Investigational Medicinal Product (IMP) as defined in the study protocol was fulfilled.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 May 2015	- Added language regarding the predicted number of deaths due to NSCLC in the EU in 2014. - Added language to inclusion criterion 13 for subjects being treated with docetaxel to use effective contraception for up to 3 months after docetaxel treatment and to advise male subjects not to father a child during the 3 months after treatment with docetaxel and to seek advice on conservation of sperm prior to treatment.
10 July 2015	– Excluded further enrollment of NSCLC subjects with EGFR mutations. – Modified language in Exclusion criterion 4 such that prior therapy with cancer vaccine was no longer allowed. – Changed the duration of treatment for subjects with a confirmed CR to a maximum of 24 months. – Modified AE and SAE follow-up language such that subjects with an AE ongoing at the time of the End-of-Treatment visit must be followed up until the Safety follow-up visit and subjects with a SAE ongoing at the Long term follow-up visit must be followed up by the Investigator until stabilization or until outcome was known, unless the subject was documented as "lost to follow-up. – Changed the bilirubin inclusion criterion from 1.0 x ULN to 1.5 x ULN. – Modified hepatitis testing to include type of test. – Modified mandatory chest CT to allow MRI of the chest to account for regions where CT may be prohibited. – Added language stipulating that complete blood count and core chemistry samples must be drawn and results reviewed within 48 hours prior to IMP administration. – Deleted patient-reported outcome / quality-of-life assessments from the Safety Follow-up and Long-term Follow-up visits. – Added language allowing corticosteroid use in subjects randomized to docetaxel. – Added vaccines to the list of prohibited medications. – Added PK sampling at the End-of-Treatment visit and ADA sampling at the Safety Follow-up visit.
15 November 2016	– Increased the number of subject to be randomized in the study by 100 due to the new (lower) estimation of the proportion of subjects with PD-L1+ tumors and updated the proportion expected to have PD-L1+ tumors from 80% to 70%. – Updated language regarding tumor assessments so that after 1 year (Week 55) from the start of treatment, assessments would be every 12 weeks (rather than every 6 weeks). – Changed Human Antihuman Antibody (HAHA) to ADA throughout the protocol. – Corrected discrepancies in PK sampling between the text and the Schedule of Assessments – Updated contraception language in the Inclusion Criteria to harmonize with the rest of the avelumab program. – Deleted requirement for subjects with repeated Grade 2 IRRs and ADRs to be withdrawn from treatment. – Updated language on timing of when weight should be determined for dose calculation in order to give more flexibility to Investigators – Deleted bisphosphonate and denosumab from list of nonpermissible medications. – Added language to allow subjects with brain metastases to continue treatment if they fulfilled outlined criteria. – Added guidelines for the management of suspected cardiac-related Immune-related adverse event (irAEs). – Changed definition of overdose from $\geq 5\%$ to $\geq 10\%$ of calculated dose. – Deleted blood sample collection for Adrenocorticotrophic hormone (ACTH), Antinuclear antibody (ANA), Antineutrophil cytoplasmic antibody (ANCA) and rheumatoid factor from End of Treatment and Safety Follow-up visits – Deleted the PP analysis set and any associated analyses – Replaced the ITT population with the FAS

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
