

## Clinical trial results:

### A Phase 3, Randomized, Observer-blind, Multicenter Study to Evaluate the Immunogenicity and Safety of Novartis rMenB+OMV NZ Vaccine in Healthy Subjects Aged 11 to 17 years in Korea.

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

## Summary

EudraCT number	2014-005083-15
Trial protocol	Outside EU/EEA
Global end of trial date	05 April 2014

## Results information

Result version number	v2 (current)
This version publication date	04 June 2016
First version publication date	03 May 2015
Version creation reason	<ul style="list-style-type: none"><li>Correction of full data set re-QC of study needed because of EudraCT system glitch and updates to results are required.</li></ul>

## Trial information

### Trial identification

Sponsor protocol code	V72_42
-----------------------	--------

### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01973218
WHO universal trial number (UTN)	-

## Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	18 March 2015
Is this the analysis of the primary completion data?	No

---

Global end of trial reached?	Yes
Global end of trial date	05 April 2014
Was the trial ended prematurely?	No

---

Notes:

---

**General information about the trial**

---

Main objective of the trial:

Immunogenicity:

To assess the immunogenicity following two doses (Day 1 and Day 31) of Novartis rMenB+OMV NZ vaccine and control vaccines in healthy adolescents, as measured by the percentage of subjects with serum bactericidal activity (SBA) titer  $\geq 1:4$  against indicator strains H44/76, 5/99 and NZ98/254 one month after the second dose (Day 61).

---

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH) Harmonized Tripartite Guidelines for Good Clinical Practice (GCP), with applicable local regulations, Novartis Vaccines and Diagnostics codes on protection of human rights, and with the ethical principles laid down in the Declaration of Helsinki (European Council 2001, US Code of Federal Regulations, ICH 1997).

---

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 April 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

---

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Korea, Republic of: 264
Worldwide total number of subjects	264
EEA total number of subjects	0

---

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	42
Adolescents (12-17 years)	222

---

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects were recruited from 7 study centers in Korea.

### Pre-assignment

Screening details:

All enrolled subjects were included in the trial.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	rMenB

Arm description:

Subjects received two doses of Meningococcal B Recombinant + Outer Membrane Vesicles New Zealand vaccine (rMenB+OMV NZ) vaccine (at Day 1 and Day 31) in the study.

Arm type	Experimental
Investigational medicinal product name	rMenB+ OMV NZ
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received 0.5mL of rMenB+OMV NZ vaccine on Day 1 and Day 31.

<b>Arm title</b>	Placebo/MenACWY
------------------	-----------------

Arm description:

Subjects received one dose of saline placebo (Day 1) and one dose of Meningococcal (groups A, C, W, and Y) Oligosaccharide Diphtheria CRM 197 Conjugate Vaccine (MenACWY-CRM) (Day 31) in the study.

Arm type	Placebo/ Active comparator
Investigational medicinal product name	MenACWY
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received 0.5mL of MenACWY vaccine on Day 31 after receiving saline solution on Day 1.

Investigational medicinal product name	Saline solution
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received saline at Day 1.

<b>Number of subjects in period 1</b>	rMenB	Placebo/MenACWY
Started	176	88
Completed	174	88
Not completed	2	0
Consent withdrawn by subject	1	-
Adverse event	1	-

## Baseline characteristics

### Reporting groups

Reporting group title	rMenB
-----------------------	-------

Reporting group description:

Subjects received two doses of Meningococcal B Recombinant + Outer Membrane Vesicles New Zealand vaccine (rMenB+OMV NZ) vaccine (at Day 1 and Day 31) in the study.

Reporting group title	Placebo/MenACWY
-----------------------	-----------------

Reporting group description:

Subjects received one dose of saline placebo (Day 1) and one dose of Meningococcal (groups A, C, W, and Y) Oligosaccharide Diphtheria CRM 197 Conjugate Vaccine (MenACWY-CRM) (Day 31) in the study.

Reporting group values	rMenB	Placebo/MenACWY	Total
Number of subjects	176	88	264
Age categorical			
Units: Subjects			
Age continuous			
Units: years			
arithmetic mean	13.5	13.4	
standard deviation	± 1.8	± 1.8	-
Gender categorical			
Units: Subjects			
Female	77	36	113
Male	99	52	151

## End points

### End points reporting groups

Reporting group title	rMenB
Reporting group description: Subjects received two doses of Meningococcal B Recombinant + Outer Membrane Vesicles New Zealand vaccine (rMenB+OMV NZ) vaccine (at Day 1 and Day 31) in the study.	
Reporting group title	Placebo/MenACWY
Reporting group description: Subjects received one dose of saline placebo (Day 1) and one dose of Meningococcal (groups A, C, W, and Y) Oligosaccharide Diphtheria CRM 197 Conjugate Vaccine (MenACWY-CRM) (Day 31) in the study.	
Subject analysis set title	All Enrolled Set
Subject analysis set type	Intention-to-treat
Subject analysis set description: All subjects who have signed the informed consent, undergone screening procedures and were randomized.	
Subject analysis set title	Safety Set (overall)
Subject analysis set type	Safety analysis
Subject analysis set description: All subjects in the Exposed Set who have either post-vaccination adverse event or "reactogenicity" records. Subjects will be analyzed as "treated" (i.e., according to the vaccine a subject received, rather than the vaccine to which the subject may have been randomized).	
Subject analysis set title	Full Analysis Set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description: All subjects in the Enrolled Population who received at least one dose of study vaccination and provide immunogenicity data at relevant time points. FAS populations will be analyzed "as randomized" (i.e., subject is analyzed according to the vaccine he/she was designated to receive, which may be different from the vaccine the subject actually received).	

### Primary: 1. Percentage of subjects with human serum bactericidal antibody titers (SBA) $\geq 1:4$ against *Neisseria meningitidis* serogroup B by vaccine group.

End point title	1. Percentage of subjects with human serum bactericidal antibody titers (SBA) $\geq 1:4$ against <i>Neisseria meningitidis</i> serogroup B by vaccine group. <sup>[1]</sup>
End point description: Percentage of subjects with SBA $\geq 1:4$ against each of the three indicators strains of <i>N.meningitidis</i> serogroup B, at one month after second vaccination, were reported for each group. Analysis was done on the Full Analysis Set i.e. all subjects who received at least one study vaccine and had immunogenicity data at relevant timepoints.	
End point type	Primary
End point timeframe: Day 1, Day 61	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is associated to this Endpoint.

End point values	rMenB	Placebo/MenAC WY		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	174	88
