

Clinical trial results:

Prospective, open-label, uncontrolled, Phase III study to assess the efficacy, safety, and pharmacokinetics of Octafibrin for on-demand treatment of acute bleeding and to prevent bleeding during and after surgery in paediatric subjects with congenital fibrinogen deficiency

Summary

EudraCT number	2014-005115-16
Trial protocol	Outside EU/EEA
Global end of trial date	11 June 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001208-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 January 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 June 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of Octafibrin for on-demand treatment of acute bleeding episodes (spontaneous or after trauma)

Protection of trial subjects:

This trial was conducted in accordance to the principles of ICH- GCP, ensuring that the rights, safety and well-being of patients are protected and in consistency with the Declaration of Helsinki, national regulatory requirements and FDA Code of Federal Regulations.

Inclusion and exclusion criteria were carefully defined in order to protect subjects from contraindications, interactions with other medication and risk factors associated with the investigational medicinal product.

Throughout the study safety was assessed, such as of monitoring of AEs, SAEs, concomitant medication, monitoring of Thromboembolic events (TEEs) and assessments of safety lab parameters.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 December 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Iran, Islamic Republic of: 2
Country: Number of subjects enrolled	India: 4
Country: Number of subjects enrolled	Lebanon: 8
Worldwide total number of subjects	14
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1

Children (2-11 years)	13
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients aged <12 years at the start of treatment with documented diagnosis of congenital fibrinogen deficiency, expected to require on-demand treatment for bleeding or surgical prophylaxis were screened according to predefined in- and exclusion criteria.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Octafibrin
-----------	------------

Arm description:

Octafibrin was individually dosed to achieve a recommended target fibrinogen plasma level dependent on the type of bleeding or surgery.

Arm type	Experimental
Investigational medicinal product name	Octafibrin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Octafibrin is a human plasma-derived fibrinogen concentrate for intravenous use. The product is packed and labelled according to local regulations in vials containing 1 g of lyophilised fibrinogen concentrate powder for reconstitution with 50 mL of water for injection (WFI). It was administered as an intravenous bolus injection at a maximum speed of 5 mL/min. Continuous infusion was not allowed. Octafibrin was individually dosed to achieve a recommended target fibrinogen plasma level dependent on the type of bleeding or surgery (minor or major).

Number of subjects in period 1	Octafibrin
Started	14
Completed	11
Not completed	3
Consent withdrawn by subject	2
Adverse event, non-fatal	1

Subject analysis set description:	
Patients with elevated values of prothrombin Fragments 1+2 (outside of the reference range of 69 to 229 pmol/L, 3 hours post infusion)	

Primary: Efficacy Assessment for Treatment of the First Bleeding Episode (4-Point Efficacy Scale)

End point title	Efficacy Assessment for Treatment of the First Bleeding Episode (4-Point Efficacy Scale) ^[1]
-----------------	---

End point description:

Primary Endpoint was the investigators overall clinical assessment of the haemostatic efficacy of Octafibrin in treating the first documented bleeding episode of each patient ((firstBLEED/firstBLEED-PP dataset; n=8)

The investigator's overall clinical assessment of haemostatic efficacy for bleeding was based on a 4-point haemostatic efficacy rating scale (Excellent, Good, Moderate, None) The final efficacy assessment of each patient was adjudicated by the Independent Data Monitoring & Endpoint Adjudication Committee (IDMEAC). If any intra- or post-operative endpoint data differed between the investigator's assessment and the adjudicated assessment by the IDMEAC, the final endpoint assessment was that based on the adjudicated assessments based on an agreed algorithm.

End point type	Primary
----------------	---------

End point timeframe:

First Octafibrin infusion for the treatment of a bleeding episode until 24 hours (i.e., 1 day) after the last infusion or the end of the treatment observation period, whichever comes last.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Analysis of the study data was descriptive and focused on overall clinical assessment of the haemostatic efficacy and safety analyses. The final efficacy assessment of each patient was adjudicated by the IDMEAC.

The statistical analysis of the primary, secondary and safety endpoints were exploratory only and no confirmatory hypothesis testing was carried out.

End point values	Investigator	IDMEAC		
Subject group type	Subject analysis set	Subject analysis set

Secondary: Change in Maximum Clot Firmness (MCF) for the First Bleeding Episode for Each Patients and for All Bleeding Episodes

End point title	Change in Maximum Clot Firmness (MCF) for the First Bleeding Episode for Each Patients and for All Bleeding Episodes
-----------------	--

End point description:

MCF was measured using thromboelastometry (ROTEM). ROTEM is a method for the continuous measurement of clot formation and clot firmness. It utilises a mechanical detection system which is based on the ability of the blood or plasma clot to form a mechanical coupling over a distance of 1 mm. ROTEM was used to measure MCF as a surrogate efficacy marker for haemostatic efficacy before and after the first infusion of Octafibrin for treatment of the first bleeding episode and all bleeding episodes. The change in MCF was measured from baseline to 1 hour post-infusion of Octafibrin administration. The analysis was performed in patients in the full-analysis set population that had at least one bleeding episode (BE) treated with Octafibrin (firstBLEED population: n=8), and all patients that had all documented BEs treated with Octafibrin (BLEED population: n=8)

End point type	Secondary
----------------	-----------

End point timeframe:

Before first infusion and 1 hour post-infusion of Octafibrin.

Secondary: Safety Assessment to Assess the Safety of Octafibrin in Thromboembolic Complications: Prothrombin F1 + F2 levels

End point title	Safety Assessment to Assess the Safety of Octafibrin in Thromboembolic Complications: Prothrombin F1 + F2 levels
-----------------	--

End point description:

Thrombogenicity was assessed by measuring the plasma levels of prothrombin fragment 1 (F1) and prothrombin fragment 2 (F2), before and after each Octafibrin infusion for the treatment of bleeding episodes during the study. This outcome measure examined the number of patients with elevated values of prothrombin F1 + F2 that were outside the reference range of 69 to 229 pmol/L, three hours post-infusion with Octafibrin.

The analysis was performed in all patients in the safety population that met the study inclusion criteria and received at least one infusion of Octafibrin (n=14).

End point type	Secondary
----------------	-----------

End point timeframe:

3 hours post-infusion of Octafibrin .

Secondary: Safety Assessment: Immunogenicity Testing for Anti-fibrinogen Antibodies

End point title	Safety Assessment: Immunogenicity Testing for Anti-fibrinogen Antibodies
-----------------	--

End point description:

The number of patients developing anti-fibrinogen antibodies were observed during the observation period using an experimental non-standard ELISA quantitative laboratory test.

Immunogenicity testing for the presence of anti-fibrinogen antibodies before the first infusion of Octafibrin and on Day 30 after the treatment of each bleeding episode.

End point type	Secondary
----------------	-----------

End point timeframe:

Start of the first Octafibrin infusion to the end of each 30-day observation and follow-up period for on-demand treatment.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

On-Demand Treatment: Between start of the first Octafibrin infusion and the end of each 30-day observation and follow-up period

Surgical Prophylaxis: between first infusion of IMP before the start of surgery and the Last Post-operative Day

Adverse event reporting additional description:

Treatment-emergent adverse events (TEAEs): AEs occurring between the start of the first Octafibrin infusion and the end of each 30-day observation and follow-up period and during the surgical follow-up

Non-TEAEs: were all AEs not falling into the follow-up periods

Assessment type	Systematic
-----------------	------------

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 September 2015	Amendment#1: <ul style="list-style-type: none">• Change in PK time point from Day5 (96 hours) to Day 4 (72 hours as requested by US FDA and after reviewing the results of the FORMA 01 PK study data analysis.• Including the median response in this dose calculation formula as the median incremental in vivo recovery reported for the PK of Octafibrin in the final analysis of study FORMA-01 which was calculated as 1.77 (g/L / mg/kg)
08 July 2016	Amendment#2: was prepared in response to the information request by the Food and Drug Administration (FDA) <ol style="list-style-type: none">1. For the primary analysis of haemostatic efficacy of Octafibrin in the treatment of the first bleeding episode of each patient, the original 90% confidence interval (CI) was replaced with a two-sided 95% CI.2. For the secondary analysis of haemostatic efficacy of Octafibrin in the treatment of all bleeding episodes, this amendment now clarifies that the 95% CI of success rate estimates will be a two-sided 95% CI3. The number of patients enrolled for the PK analysis was increased from at least 6 to at least 124. Intraoperative efficacy as assessed by the surgeon excluded unexpected blood loss due to surgical complications. The protocol now contains the provision that, in documenting the adjudication process for the assessment of surgical prophylaxis, the IDMEAC explicitly identifies any subjects for whom they considered there to have been 'unexpected blood loss due to surgical complications' and state whether this unexpected blood loss altered the 4-point assessment of surgical prophylaxis. Any such cases shall be analyzed both including (as a sensitivity analysis) and excluding unexpected blood loss.5. To facilitate detection of thromboembolic events (TEEs), a 'TEE questionnaire' including symptoms relevant for the diagnosis of deep venous thrombosis has been added to the study.
30 May 2017	Amendment #3 : <ol style="list-style-type: none">1. Addition of a statement regarding a planned interim analysis and when this will be performed.2. Addition of a statement regarding when the clinical study report will be available for the submission to the competent authorities.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
