Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 September 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 September 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to determine the safety, pharmacokinetic profile and tolerability of atazanavir with or without ritonavir plus 2 nucleoside analog reverse-transcriptase inhibitors (NRTIs) in infants, children, and adolescents infected with HIV.

Protection of trial subjects:

The study was conducted in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy:

Nucleoside analog reverse-transcriptase inhibitors, (NRTIs) such as zidovudine, stavudine, zalcitabine, didanosine, or lamivudine, were used in combinations as recommended in the Guidelines for the Use of Antiretroviral Agents in Pediatric and Adolescent HIV Infection, 2000. NRTIs such as abacavir sulfate and tenofovir disoproxil fumarate were prohibited. Nucleoside backbone therapy was determined on the basis of the subject's genotypic and phenotypic resistance profile.

Evidence for comparator: -

Actual start date of recruitment	16 November 2000
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	South Africa: 70
Country: Number of subjects enrolled	United States: 125
Worldwide total number of subjects	195
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	41
Children (2-11 years)	92
Adolescents (12-17 years)	52
Adults (18-64 years)	10
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at 36 sites (34 in the United States and 2 in South Africa).

Pre-assignment

Screening details:

A total of 195 subjects were enrolled and 193 subjects were treated in the study.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

The study was open label, hence blinding was not applicable.

Arms

Are arms mutually exclusive?	Yes
Arm title	Atazanavir

Arm description:

Subjects received atazanavir at a starting dose of 310 milligram per square meter (mg/m^2) in powder or capsule, orally, once daily in the morning, administered in combination with 2 nucleoside analog reverse-transcriptase inhibitors (NRTIs). The dose of atazanavir was modified to 205 mg/m^2 , 415 mg/m^2 , 520 mg/m^2 , and 620 mg/m^2 during the study based on body surface area and body weight. Capsule formulation was limited by age of the subjects.

Arm type	Experimental
Investigational medicinal product name	Atazanavir
Investigational medicinal product code	BMS-232632
Other name	
Pharmaceutical forms	Capsule, Powder for oral solution
Routes of administration	Oral use

Dosage and administration details:

Atazanavir 205 mg/m^2 , 310 mg/m^2 , 415 mg/m^2 , 520 mg/m^2 , and 620 mg/m^2 , as capsule and in powder formulation, was administered orally, once daily in the morning.

Arm title	Atazanavir + Ritonavir
------------------	------------------------

Arm description:

Subjects received atazanavir at a starting dose of 205 mg/m^2 or 310 mg/m^2 , powder or capsule, orally, once daily in the morning in combination with ritonavir 100 mg/m^2 , capsule or oral solution, orally, once daily in the morning, along with 2 nucleoside analog reverse-transcriptase inhibitors.

Arm type	Experimental
Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard, Powder for oral solution
Routes of administration	Oral use

Dosage and administration details:

Ritonavir 100 mg/m^2 as capsule or oral solution was administered.

Investigational medicinal product name	Atazanavir
Investigational medicinal product code	BMS-232632
Other name	
Pharmaceutical forms	Capsule, Powder for oral solution
Routes of administration	Oral use

Dosage and administration details:

Atazanavir 205 mg/m², 310 mg/m² as capsule or in powder formulation was administered orally, once daily in the morning.

Number of subjects in period 1^[1]	Atazanavir	Atazanavir + Ritonavir
Started	85	108
Completed	16	49
Not completed	69	59
Clinical events or progression	20	8
Request treatment discontinuation	10	9
Toxicity	12	7
Death	-	2
Protocol compliance	18	29
Disallowed medications	4	4
Other reasons	5	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial as out of 195 subjects who were enrolled, 193 subjects were treated in the study.

Baseline characteristics

Reporting groups

Reporting group title	Atazanavir
-----------------------	------------

Reporting group description:

Subjects received atazanavir at a starting dose of 310 milligram per square meter (mg/m²) in powder or capsule, orally, once daily in the morning, administered in combination with 2 nucleoside analog reverse-transcriptase inhibitors (NRTIs). The dose of atazanavir was modified to 205 mg/m², 415 mg/m², 520 mg/m², and 620 mg/m² during the study based on body surface area and body weight. Capsule formulation was limited by age of the subjects.

Reporting group title	Atazanavir + Ritonavir
-----------------------	------------------------

Reporting group description:

Subjects received atazanavir at a starting dose of 205 mg/m² or 310 mg/m², powder or capsule, orally, once daily in the morning in combination with ritonavir 100 mg/m², capsule or oral solution, orally, once daily in the morning, along with 2 nucleoside analog reverse-transcriptase inhibitors.

Reporting group values	Atazanavir	Atazanavir + Ritonavir	Total

End points

End points reporting groups

Reporting group title	Atazanavir
Reporting group description: Subjects received atazanavir at a starting dose of 310 milligram per square meter (mg/m ²) in powder or capsule, orally, once daily in the morning, administered in combination with 2 nucleoside analog reverse-transcriptase inhibitors (NRTIs). The dose of atazanavir was modified to 205 mg/m ² , 415 mg/m ² , 520 mg/m ² , and 620 mg/m ² during the study based on body surface area and body weight. Capsule formulation was limited by age of the subjects.	
Reporting group title	Atazanavir + Ritonavir
Reporting group description: Subjects received atazanavir at a starting dose of 205 mg/m ² or 310 mg/m ² , powder or capsule, orally, once daily in the morning in combination with ritonavir 100 mg/m ² , capsule or oral solution, orally, once daily in the morning, along with 2 nucleoside analog reverse-transcriptase inhibitors.	
Subject analysis set title	Atazanavir 205 mg/m ²
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received atazanavir 205 mg/m ² , powder or capsule administered once daily with or without ritonavir, stratified by age.	
Subject analysis set title	Atazanavir 310 mg/m ²
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received atazanavir 310 mg/m ² , powder or capsule administered once daily with or without ritonavir, stratified by age.	
Subject analysis set title	Atazanavir 415 mg/m ²
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received Atazanavir 415 mg/m ² , powder or capsule administered once daily with or without ritonavir, stratified by age.	
Subject analysis set title	Atazanavir 520 mg/m ²
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received atazanavir 520 mg/m ² , powder or capsule administered once daily with or without ritonavir, stratified by age.	
Subject analysis set title	Atazanavir 620 mg/m ²
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received Atazanavir 620 mg/m ² , powder or capsule administered once daily with or without ritonavir, stratified by age.	

Primary: Area under the plasma concentration-time curve from time 0 to 24 hours postdose (AUC[0-24])

End point title	Area under the plasma concentration-time curve from time 0 to 24 hours postdose (AUC[0-24]) ^[1]
End point description: AUC(0-24) was determined from concentration time data using trapezoidal method. The analysis was performed in pharmacokinetic concentration data set, defined as treated subjects with any plasma concentration data. Here, 'n' signifies evaluable subjects for specified categories in respective treatment arms, and '99999' represents not estimable data for specified categories in respective arms. ATV=Atazanavir; RTV=ritonavir.	
End point type	Primary
End point timeframe: Predose, 1, 2, 3, 4, 6, 8, 12 and 24 hours post dose on Day 7 and Week 56	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive summary statistics were planned for this outcome measure.

Reporting groups

Reporting group title	Atazanavir + Ritonavir
-----------------------	------------------------

Reporting group description:

Subjects received atazanavir at a starting dose of 205 mg/m² or 310 mg/m², powder or capsule, orally, once daily in the morning in combination with ritonavir 100 mg/m², capsule or oral solution, orally, once daily in the morning, along with 2 nucleoside analog reverse-transcriptase inhibitors.

Reporting group title	Atazanavir
-----------------------	------------

Reporting group description:

Subjects received atazanavir at a starting dose of 310 milligram per square meter (mg/m²) in powder or capsule, orally, once daily in the morning, administered in combination with 2 nucleoside analog reverse-transcriptase inhibitors (NRTIs). The dose of atazanavir was modified to 205 mg/m², 415 mg/m², 520 mg/m², and 620 mg/m² during the study based on body surface area and body weight. Capsule formulation was limited by age of the subjects.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 September 2005	The purpose of this amendment was to inform clinical site and pharmacy staff that ritonavir solution was temporarily not available through the National Institute of Allergy and Infectious Diseases Clinical Research Products Management Center (CRPMC). New supplies of ritonavir were expected at the CRPMC the week of September 26, 2005.
26 September 2005	The purpose of this amendment was to modify the pharmacokinetic criteria for continuing to evaluate a dose of atazanavir in combination with ritonavir in infants, children, and adolescents through Paediatric Acquired Immuno Deficiency Syndrome (AIDS) Clinical Trials Group (PACTG) 1020A.
19 December 2005	The purpose of this amendment was to provide additional directions to National Institute of Child Health and Human Development sites participating in PACTG P1020 related to storage of blood specimens.
13 December 2006	The purpose of this amendment was to provide directions and justification to sites participating in P1020A related to allowing subjects to switch from the powder to the capsule formulation of atazanavir, depending on subject's age and ability to swallow tablets and capsules.
04 December 2009	The purpose of this amendment was to allow for modifications in a subject's treatment regimen if required by toxicity to 1 of the 2 nucleoside analog reverse-transcriptase inhibitor agents. This amendment applied only to subjects who had completed at least 56 weeks of therapy, and had successfully completed the 56 week intensive pharmacokinetic evaluation.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
