Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 October 2018
Global end of trial reached?	Yes
Global end of trial date	12 October 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine a difference in progression-free-survival (PFS) between lurbinectedin (PM01183) and pegylated liposomal doxorubicin (PLD) or topotecan in platinum-resistant ovarian cancer patients according to the Response Evaluation Criteria in Solid Tumors (RECIST) v.1.1.

Protection of trial subjects:

The study was in compliance with ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

All patients received the following standard antiemetic prophylaxis before each treatment infusion:

- Corticosteroids (dexamethasone i.v. at least 8 mg or equivalent, or at institutional standard antiemetic doses).
- Serotonin (5-HT₃) antagonists (ondansetron at least 8 mg i.v. or equivalent).

If necessary, in addition to the above, the duration of treatment with 5-HT₃ antagonists and/or dexamethasone could be extended. Additional antiemetic agents could be administered as appropriate. Aprepitant and equivalent agents (e.g., fosaprepitant) were forbidden in patients treated with lurbinectedin.

For the purpose of safety evaluations, an optimal prophylaxis was defined as all the aforementioned allowed medications at their respectively maximum dose.

Evidence for comparator: -

Actual start date of recruitment	26 June 2015
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Romania: 22
Country: Number of subjects enrolled	Spain: 86
Country: Number of subjects enrolled	United Kingdom: 31
Country: Number of subjects enrolled	Austria: 7
Country: Number of subjects enrolled	Belgium: 40
Country: Number of subjects enrolled	Bulgaria: 10
Country: Number of subjects enrolled	Czech Republic: 10
Country: Number of subjects enrolled	France: 31
Country: Number of subjects enrolled	Hungary: 23
Country: Number of subjects enrolled	Italy: 94
Country: Number of subjects enrolled	United States: 79
Country: Number of subjects enrolled	Serbia: 9

Worldwide total number of subjects	442
EEA total number of subjects	354

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	267
From 65 to 84 years	172
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

First randomization/first study treatment administration took place on 26JUN2015. The cutoff date for results was 12OCT2018.

534 patients were screened; 442 were randomized at 83 sites/12 countries. 10 patients did not receive the study treatment.

Pre-assignment

Screening details:

IC; Age ≥ 18 years; confirmed diagnosis of unresectable epithelial ovarian, fallopian tube or primary peritoneal cancer; Platinum-resistant disease; ECOG PS ≤ 2 ; Adequate hematological, renal, metabolic, and hepatic function

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Lurbinectedin

Arm description:

3.2 mg/m² i.v. as a 1-hour infusion on Day 1 q3wk (three weeks = one treatment cycle) through peripheral or central lines. A minimum total volume of 100 mL, diluted in 5% glucose or 0.9% sodium chloride solution for infusion, had to be used for administration through a central venous catheter; if a peripheral venous catheter was used, the minimum volume was 250 mL

Arm type	Experimental
Investigational medicinal product name	Lurbinectedin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

3.2 mg/m² i.v. as a 1-hour infusion on Day 1 q3wk (three weeks = one treatment cycle) through peripheral or central lines. A minimum total volume of 100 mL, diluted in 5% glucose or 0.9% sodium chloride solution for infusion, had to be used for administration through a central venous catheter; if a peripheral venous catheter was used, the minimum volume was 250 mL

Arm title	Control (PLD or topotecan)
------------------	----------------------------

Arm description:

Patients randomized to the Control arm were assigned to receive PLD if they had previously been treated with topotecan, or to receive topotecan if they had previously been treated with PLD. However, if the number of patients randomized to either PLD or topotecan reached 60% (i.e., 126 patients) of the total number of patients expected in the Control Arm, then the treatment of choice in the Control Arm would be restricted to the less frequent control drug until the end of accrual

Arm type	Active comparator
Investigational medicinal product name	PLD
Investigational medicinal product code	
Other name	Pegylated Liposomal Doxorubicin
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 mg/m² i.v. on Day 1 q4wk (four weeks = one treatment cycle), at an initial rate of 1 mg/min through peripheral or central lines. If no infusion reactions were observed, the rate of infusion could be increased to complete the administration of the drug over one hour. Total PLD doses >90 mg and ≤90 mg had to be diluted in 500 and 250 mL of 5% glucose solution for infusion, respectively

Investigational medicinal product name	Topotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

i.v. as a 30-min infusion on Days 1-5 q3wk (three weeks = one treatment cycle) at the following doses:

- 1.50 mg/m² daily, for patients with calculated CrCL ≥60 mL/min.
- 1.25 mg/m² daily, for patients with calculated CrCL between 40 and 59 mL/min.
- 0.75 mg/m² daily, for patients with calculated CrCL between 30 and 39 mL/min.

Topotecan was administered through peripheral or central lines, and was diluted in a minimum of 50 mL of 0.9% sodium chloride or 5% glucose solution for infusion. Skipped doses of topotecan were not replaced.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Overall period

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	20.0
--------------------	------

Reporting groups

Reporting group title	Lurbinectedin
-----------------------	---------------

Reporting group description:

3.2 mg/m² i.v. as a 1-hour infusion on Day 1 q3wk (three weeks = one treatment cycle) through peripheral or central lines. A minimum total volume of 100 mL, diluted in 5% glucose or 0.9% sodium chloride solution for infusion, had to be used for administration through a central venous catheter; if a peripheral venous catheter was used, the minimum volume was 250 mL

Reporting group title	Control (PLD or topotecan)
-----------------------	----------------------------

Reporting group description:

Patients randomized to the Control arm were assigned to receive PLD if they had previously been treated with topotecan, or to receive topotecan if they had previously been treated with PLD. However, if the number of patients randomized to either PLD or topotecan reached 60% (i.e., 126 patients) of the total number of patients expected in the Control Arm, then the treatment of choice in the Control Arm would be restricted to the less frequent control drug until the end of accrual

Serious adverse events	Lurbinectedin	Control (PLD or topotecan)	
Total subjects affected by serious adverse events			
subjects affected / exposed	91 / 219 (41.55%)	85 / 213 (39.91%)

occurrences (all)	26	28	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 November 2015	<p>This amendment resulted in a local version (v.1.1) of the study protocol that was only implemented in France and included the following changes:</p> <ul style="list-style-type: none">• Following a request by French Health Authorities, patients with AP levels between 2.5 and 5 × ULN were not allowed to be included into the study.• As a result of the merger between Zeltia, S.A and Pharma Mar, S.A., Sociedad Unipersonal, the Sponsor shall now be referred to as Pharma Mar, S.A, without further reference to "Sociedad Unipersonal".

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported

Notes:
