

Clinical trial results:

A Phase III, Single Arm, Multi-Center, Open-Label Study to Assess the Immunogenicity, Safety and Tolerability of a Fully Liquid Pentavalent Vaccine Quinvaxem® (DTwP-Hib-HepB Vaccine) when Administered to Indian Infants at 6, 10, and 14 Weeks of Age

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 October 2012
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	23 April 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess one month after third study injection, the percentage of subjects who develop:

- Seroprotective antibody concentrations to diphtheria, tetanus and Hepatitis B (HepB)
- Antibody concentrations ≥ 20 EIU/mL or a 4 fold increase from baseline for Bordetella pertussis,
- Anti polyribosyl phosphate (PRP) Enzyme-Linked Immunosorbent Assay (ELISA) antibody concentrations > 0.15 ug/mL for Haemophilus influenzae type b (Hib) (short term protection).

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the International Conference of Harmonization (ICH) Harmonised Tripartite Guidelines for Good Clinical Practice (GCP), with applicable local regulations guidelines issued by the Central Drugs Standard Control Organization (CDSCO) and Ethical Guidelines for Biomedical Research on Human Subjects issued by the Indian Council of Medical Research (ICMR), (and also European Directive 2001/20/EC, US Code of Federal Regulations Title 21, and Japanese Ministry of Health, Labor, and Welfare), and with the ethical principles laid down in the Declaration of Helsinki. Informed consent was obtained from parents or legal guardians of infants.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 November 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	India: 175
Worldwide total number of subjects	175
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	175
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled from 3 study centres in India.

Pre-assignment

Screening details:

All enrolled subjects were included in the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

The trial was designed as single arm and open label.

Arms

Arm title	Quinvaxem
-----------	-----------

Arm description:

Infants, ≥ 42 to ≤ 64 days of age, receiving three doses of vaccine at approximately 6, 10, and 14 weeks of age (study days 1, 29 and 57).

Arm type	Experimental
Investigational medicinal product name	DTwP-Hib-HepB
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Vaccination consisted of one 0.5 mL dose administered three times, IM into the antero-lateral area of the thigh, at day 1, 29 and 57.

Number of subjects in period 1	Quinvaxem
Started	175
Completed	165
Not completed	10
Adverse event	1
Lost to follow-up	9

End points

End points reporting groups

Reporting group title	Quinvaxem
-----------------------	-----------

Reporting group description:

Infants, ≥ 42 to ≤ 64 days of age, receiving three doses of vaccine at approximately 6, 10, and 14 weeks of age (study days 1, 29 and 57).

Subject analysis set title	All population enrolled
----------------------------	-------------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

All subjects who signed an informed consent.

All subjects that underwent screening procedures.

Subject analysis set title	Immunogenicity – Per Protocol Set (PPS)
----------------------------	---

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

All subjects in the Full Analysis Set (FAS) who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

Subject analysis set title	Safety
----------------------------	--------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

All subjects in the enrolled population who received at least one dose of vaccine and provide post vaccination safety data.

Primary: 1.Percentage of subjects with seroprotective antibody concentration to diphtheria.

End point title	1.Percentage of subjects with seroprotective antibody concentration to diphtheria. ^[1]
-----------------	---

End point description:

Seroprotective activity of Quinvaxem against diphtheria was defined as anti-diphtheria antibody concentration ≥ 0.1 IU/mL.

The percentage of subjects with seroprotective antibody concentration was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity – PPS population, ie. all subjects in the FAS who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Primary
----------------	---------

End point timeframe:

One month after the third vaccination (day 85).

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: statistical analyses not applicable for this endpoint.

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: Percentage of subjects				
number (confidence interval 95%)				
Seroprotection (Day 1)	18 (12 to 25)			
Seroprotection (Day 85)	99 (97 to 100)			

Statistical analyses

No statistical analyses for this end point

Primary: 2.Percentage of subjects with seroprotective antibody concentration to tetanus.

End point title	2.Percentage of subjects with seroprotective antibody concentration to tetanus. ^[2]
-----------------	--

End point description:

Seroprotective activity of Quinvaxem against tetanus was defined as anti-tetanus antibody concentration ≥ 0.1 IU/mL.

The percentage of subjects with seroprotective antibody concentration was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity-PPS population, ie. all subjects in the FAS who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Primary
----------------	---------

End point timeframe:

One month after the third vaccination (day 85).

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: statistical analyses not applicable for this endpoint.

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: Percentage of subjects				
number (confidence interval 95%)				
Seroprotection (Day 1)	100 (98 to 100)			
Seroprotection (Day 85)	100 (98 to 100)			

Statistical analyses

No statistical analyses for this end point

Primary: 3.Percentage of subjects with seroprotective antibody concentration to Hepatitis B.

End point title	3.Percentage of subjects with seroprotective antibody concentration to Hepatitis B. ^[3]
-----------------	--

End point description:

Seroprotective activity of Quinvaxem against Hepatitis B was defined as anti-Hepatitis B antibody concentration ≥ 10 IU/mL.

The percentage of subjects with seroprotective antibody concentration was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity-PPS population, ie. all subjects in the FAS who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Primary
End point timeframe:	
One month after the third vaccination (day 85).	

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: statistical analyses not applicable for this endpoint.

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: Percentage of subjects				
number (confidence interval 95%)				
Seroprotection (Day 1) (N=160)	11 (6 to 16)			
Seroprotection (Day 85)	98 (94 to 99)			

Statistical analyses

No statistical analyses for this end point

Primary: 4.Percentage of subjects who developed antibody concentration to pertussis above pre-specified threshold.

End point title	4.Percentage of subjects who developed antibody concentration to pertussis above pre-specified threshold. ^[4]
-----------------	--

End point description:

Seroprotective activity of Quinvaxem against pertussis was defined as anti-pertussis antibody concentration ≥ 20 EIU/mL or a 4-fold increase from baseline

The percentage of subjects with antibody concentration above the pre-specified threshold was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity-PPS population, ie. all subjects in the FAS who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Primary
End point timeframe:	
One month after the third vaccination (day 85).	

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: statistical analyses not applicable for this endpoint.

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: Percentage of subjects				
number (confidence interval 95%)				
Pre-specified threshold (Day 1)	2 (1 to 6)			
Pre-specified threshold (Day 85)	99 (97 to 100)			

Statistical analyses

No statistical analyses for this end point

Primary: 5.Percentage of subjects who developed antibody to Haemophilus influenzae type b above pre-specified threshold.

End point title	5.Percentage of subjects who developed antibody to Haemophilus influenzae type b above pre-specified threshold. ^[5]
-----------------	--

End point description:

Seroprotective activity of Quinvaxem against Haemophilus influenzae type b was defined as anti-Polyribosyl phosphate antibody concentration ≥ 0.15 mcg/ml.

The percentage of subjects with seroprotective antibody concentration was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity-PPS population, ie. all subjects in the Full Analysis Set who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Primary
----------------	---------

End point timeframe:

One month after the third vaccination (day 85).

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: statistical analyses not applicable for this endpoint.

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: Percentage of subjects				
number (confidence interval 95%)				
Anti-PRP ≥ 0.15 mcg/mL (Day 1)	68 (61 to 75)			
Anti-PRP ≥ 0.15 mcg/mL (Day 85)	100 (93 to 100)			

Statistical analyses

No statistical analyses for this end point

Secondary: 6.Geometric Mean Concentration of antibody against diphtheria, tetanus, pertussis, Hepatitis B, Haemophilus influenza type b, one month after third vaccination with Quinvaxem.

End point title	6.Geometric Mean Concentration of antibody against diphtheria, tetanus, pertussis, Hepatitis B, Haemophilus influenza type b, one month after third vaccination with Quinvaxem.
-----------------	---

End point description:

The human Serum Bactericidal Activity (hSBA) antibody concentration, one month after receiving the third vaccination of Quinvaxem vaccination, is reported as geometric mean concentration (GMC).

Analysis was done on Immunogenicity-PPS population.

End point type	Secondary
End point timeframe:	
One month after the third vaccination (day 85).	

End point values	Quinvaxem			
Subject group type	Reporting group			
Number of subjects analysed	161			
Units: IU/mL				
geometric mean (confidence interval 95%)				
Anti-diphtheria GMCs (Day 1)	0.061 (0.057 to 0.066)			
Anti-diphtheria GMCs (Day 85)	1.28 (1.08 to 1.52)			
Anti-tetanus GMCs (Day 1)	2.68 (2.35 to 3.06)			
Anti-tetanus GMCs (Day 85)	2.51 (2.18 to 2.89)			
Anti-pertussis GMCs (Day 1)	4.07 (3.53 to 4.68)			
Anti-pertussis GMCs (Day 85)	54 (51 to 57)			
Anti-Hepatitis B GMCs (Day 1) (N=160)	6.47 (5.56 to 7.53)			
Anti-Hepatitis B GMCs (Day 85)	373 (296 to 470)			
Anti-PRP GMCs (Day 1)	0.27 (0.23 to 0.33)			
Anti-PRP GMCs (Day 85)	15 (12 to 18)			

Statistical analyses

No statistical analyses for this end point

Secondary: 7.Percentage of subjects with antibody concentration anti-Polyribosylphosphate (PRP) ≥ 1.0 mcg/mL

End point title	7.Percentage of subjects with antibody concentration anti-Polyribosylphosphate (PRP) ≥ 1.0 mcg/mL
-----------------	--

End point description:

Long term seroprotective activity of Quinvaxem against Haemophilus influenzae type b was defined as anti-PRP antibody concentration ≥ 1.0 mcg/mL.

The percentage of subjects with antibody concentration ≥ 1.0 mcg/mL was evaluated one month after the third vaccination with Quinvaxem.

Analysis was done on Immunogenicity-PPS population, ie. all subjects in the FAS who received all three vaccinations, provided evaluable serum samples at defined end points and have no major protocol violation.

End point type	Secondary
End point timeframe:	
One month after the third vaccination (day 85).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Throughout duration of the study.

Adverse event reporting additional description:

All AEs (including Serious Adverse Events (SAEs) and AEs leading to withdrawal of subject) and concomitant medications were collected throughout the duration of the study (day 1 through day 85 or time of early termination).

Assessment type	Non-systematic
